tended to anv. For when fociety is once formed, government refults of course, as necessary to preserve and to keep that society in order. Unless some superior be constituted, whose commands and decisions all the members are bound to obey, they would till remain as in a state of nature, without any judge upon earth to define their feveral rights, and redress their several wrongs. But as all the members of fociety are naturally equal, it may be asked. In whose hands are the reins of government to be entrusted? To this the general answer is eafy; but the application of it to particular cases has occasioned one half of those mischiefs which are apt to proceed from mifguided political zeal. In general, all mankind will agree, that government should be reposed in such persons, in whom those qualities are most likely to be found, the perfection of which is among the attributes of him who is emphatically flyled the Supreme Being; the three grand requifites, namely, of wisdom, of goodness, and of power: wisdom, to discern the real interest of the community; goodness, to endeavour always to purfue that real interest; and ftrength or power to carry this knowledge and intention into action. These are the natural foundations of fovereignty, and these are the requisites that ought to be found in every well constituted frame of govern-

How the feveral forms of government we now fee in the world at first actually began, is matter of great uncertainty, and has occasioned infinite disputes. It is not our business or intention to enter into any of them. However they began, or by what right foever they fubfift, there is and must be in all of them a fupreme, irrefiftible, absolute, uncontrolled authority, in which the jura fummi imperii, or the rights of fovereignty, refide. And this authority is placed in those hands, wherein (according to the opinion of the founders of fuch respective states, either expressly given or collected from their tacit approbation) the qualities requifite for supremacy, wisdom, goodness, and power, are the most likely to be found.

The political writers of antiquity will not allow more than three regular forms of government: the first, when the fovereign power is lodged in an aggregate affembly confifting of all the members of a community which is called a democracy; the fecond, when it is lodged in a council composed of select members, and then it is flyled an ariflocracy; the last, when it is entrusted in the hands of a fingle person, and then it takes the name of a monarchy. All other species of government, they fay, are either corruptions of, or reducible to, thefe three.

By the fovereign power, as was before observed, is or dangerous. Nº 176.

meant the making of laws; for wherever that power Of Laws refides, all others must conform to and be directed by in general. it, whatever appearance the outward form and administration of the government may put on. For it is at any time in the option of the legislature to alter that form and administration by a new edict or rule, and to put the execution of the laws into whatever hands it pleases: and all the other powers of the state must obey the legislative power in the execution of their feveral functions, or elfe the conflitution is at an end.

In a democracy, where the right of making laws refides in the people at large, public virtue or goodness of intention is more likely to be found than either of the other qualities of government. Popular affemblies are frequently foolish in their contrivance, and weak in their execution; but generally mean to do the thing that is right and just, and have always a degree of patriotifm or public spirit. In aristocracies there is more wifdom to be found than in the other forms of government; being composed, or intended to be composed, of the most experienced citizens: but there is less honesty than in a republic, and less strength than in a monarchy. A monarchy is indeed the most powerful of any, all the finews of government being knit and united together in the hand of the prince; but then there is imminent danger of his employing that ftrength to improvident or oppressive purposes.

Thus these three species of government have all of them their feveral perfections and imperfections. Democracies are usually the best calculated to direct the end of a law; arithrocacies, to invent the means by which that end shall be obtained; and monarchies, to carry those means into execution. And the ancients, as was observed, had in general no idea of any other permanent form of government but thefe three : for though Cicero declares himself of opinion, " esse optime constitutam rempublicam, que ex tribus generibus illis, regali, optimo, et populari, fit modice confusa;" yet Tacitus treats this notion of a mixed government, formed out of them all, and partaking of the advantages of each. as a visionary whim, and one that, if effected, could

never be lafting or fecure. But, happily for us of this island, the British con-British conflitution has long remained, and we truft will long con-flitution. tinue, a standing exception to the truth of this observation. For, as with us the executive power of the laws is lodged in a fingle person, they have all the advantages of itrength and dispatch that are to be found in the most absolute monarchy: and, as the legislature of the kingdom is entrufted to three diffinct powers, entirely independent of each other; first, the king; fecondly, the lords spiritual and temporal, which is an aristocratical affembly of persons selected for their piety, their birth, their wisdom, their valour, or their property; and, thirdly, the house of commons, freely chosen by the people from among themselves, which makes it a kind of democracy; as this aggregate body, actuated by different springs and attentive to different interests, composes the British parliament, and has the fupreme disposal of every thing, there can no inconvenience be attempted by either of the three branches, but will be withflood by one of the other two, each branch being armed with a negative power fufficient to repel any innovation which it shall think inexpedient

Here,

Different forms thereof.

Of Laws

Here, then, is lodged the fovereignty of the British in general conflictation; and lodged as beneficially as is possible for fociety. For in no other shape could we be so certain of finding the three great qualities of government fo well and fo happily united. If the fupreme power were lodged in any one of the three branches feparately, we must be exposed to the inconveniences of either absolute monarchy, aristocracy, or democracy; and fo want two of the three principal ingredients of good polity, either virtue, wifdom, or power. If it were lodged in any two of the branches; for inftance, in the king and house of lords; our laws might be providently made and well executed, but they might not always have the good of the people in view: if lodged in the king and commons, we fhould want that circuminection and mediatory caution, which the wifdom of the peers is to afford: if the supreme rights of legislature were lodged in the two houses only, and the king had no negative upon their proceedings, they might be tempted to encroach upon the royal prerogative, or perhaps to abolish the kingly office, and thereby weaken (if not totally deftroy) the ftrength of the executive power. But the conflitutional government of this island is so admirably tempered and compounded, that nothing can endanger or hurt it, but destroying the equilibrium of power between one branch of the legislature and the reft. For if ever it should happen. that the independence of any one of the three should be loft, or that it should become subservient to the views of either of the other two, there would foon be an end of our conflitution. The legislature would be changed from that which was originally fet up by the general confent and fundamental act of the fociety: and fuch a change, however effected, is, according to Mr Locke (who perhaps carries his theory too far), at once an entire diffolution of the bands of government; and the people are thereby reduced to a state of anarchy, with liberty to constitute to themselves a new legislative power.

Having thus curforily confidered the three usual species of government, and our own fingular constitution felected and compounded from them all, we proceed to observe, that, as the power of making laws conflitutes the supreme authority, so wherever the supreme authority in any state resides, it is the right of that authority to make laws; that is, in the words of our definition, to prescribe the rule of civil action. And this may be discovered from the very end and institution of civil states. For a state is a collective body, composed of a multitude of individuals, united for their fafety and convenience. and intending to act together as one man. If it therefore is to act as one man, it ought to act by one uniform will. But, inafmuch as political communities are made up of many natural perfons, each of whom has his particular will and inclination, thefe feveral wills cannot by any natural union be joined together, or tempered and disposed into a lasting harmony, fo as to conflitute and produce that one uniform will of the whole. It can therefore be no otherwise produced than by a political union; by the confent of all perfons to fubmit their own private wills to the will of one man, or of one or more affemblies of men, to whom the supreme authority is entrusted; and this will of that one man, or affemblage of men, is in Vol. IX. Part II.

different states, according to their different constitu- Of Laws tions, understood to be law.

Thus far as to the right of the supreme power to make laws: but farther, it is its duty likewife. For fince the respective members are bound to conform themselves to the will of the state, it is expedient that they receive directions from the state declaratory of that its will. But as it is impossible, in fo great a multitude, to give injunctions to every particular man, relative to each particular action, therefore the flate establishes general rules, for the perpetual information and direction of all persons in all points, whether of positive or negative duty: and this, in order that every man may know what to look upon as his own, what as another's; what absolute and what relative duties are required at his hands; what is to be effectied honest, dishonest, or indifferent; what degree every man retains of his natural liberty, and what he has given up as the price of the benefits of fociety; and after what manner each person is to moderate the use and exercise of those rights which the state assigns him, in order to promote and fecure the public tran-

From what has been advanced, the truth of the for- Second mer branch of our definition is (we trust) fufficiently branch of evident; that " municipal law is a rule of civil con the definiduct, prescribed by the supreme power in a state." We tion, illuproceed now to the latter branch of it; that it is a rule fo prefcribed, " commanding what is right, and prohibiting what is wrong."

Now, in order to do this completely, it is first of all necessary that the boundaries of right and wrong be established and ascertained by law. And when this is once done, it will follow of courfe, that it is likewife the business of the law, considered as a rule of civil conduct, to enforce these rights, and to restrain or redress these wrongs. It remains therefore only to confider, in what manner the law is faid to afcertain the boundaries of right and wrong; and the methods which it takes to command the one and prohibit the

For this purpose, every law may be faid to confist of feveral parts: one, declaratory; whereby the rights to be observed, and the wrongs to be eschewed, are clearly defined and laid down: another, directory; whereby the fubject is inftructed and enjoined to observe those rights, and to abitain from the commission of those wrongs: a third, remedial; whereby a method is pointed out to recover a man's private rights, or redress his private wrongs: to which may be added a fourth, usually termed the fanction or vindicatory branch of the law; whereby it is fignified what evil or penalty shall be incurred by fuch as commit any public wrongs. and transgress or neglect their duty.

With regard to the first of these, the declaratory Declarapart of the municipal law; this depends not fo much tory part of upon the law of revelation or of nature, as upon the the law. wisdom and will of the legislator. This doctrine, which before was flightly touched, deferves a more particular explication. Those rights, then, which God and nature have established, and are therefore called natural rights, fuch as are life and liberty, need not the aid of human laws to be more effectually invested in every man than they are; neither do they receive any additional ftrength 4H when

Of Laws when declared by the municipal laws to be inviolable. in general. On the contrary, no human legislature has power to abridge or destroy them, unless the owner shall himfelf commit fome act that amounts to a forfeiture. Neither do divine or natural duties (fuch as, for inftance, the worship of God, the maintenance of children, and the like) receive any ftronger fauction from being also declared to be duties by the law of the land. The case is the same as to crimes and misdemeanours. that are forbidden by the superior laws, and therefore flyled mala in fe, fuch as murder, theft, and periury : which contract no additional turpitude from being declared unlawful by the inferior legislature. For that legislature in all these cases acts only, as was before observed, in suborumation to the Great Lawgiver, transcribing and publishing his precepts. So that, upon the whole, the declaratory part of the municipal law has no force or operation at all, with regard to actions that are naturally and intrinfically right or

But with regard to things in themselves in lifferent, the case is entirely altered. These become either right or wrong, just or unjust, duties or misdemeanors, according as the municipal legislator fees proper, for promoting the welfare of the fociety, and more effectually carrying on the purposes of civil life. Thus our own common law has declared, that the goods of the wife do instantly upon marriage become the property and right of the husband; and our statute law has declared all monopolies a public offence : yet that right, and this offence, have no foundation in vature; but are merely created by the law, for the purposes of civil fociety. And fometimes, where the thing itfelf has its rife from the law of nature, the particular cir. cumstances and mode of doing it become right or wrong, as the laws of the land shall direct. Thus, for instance, in civil duties; obedience to superiors is the doctrine of revealed as well as natural religion ; but who those fuperiors shall be, and in what circumstances, or to what degrees they shall be obeyed, is the province of human laws to determine. And fo, as to injuries or crimes, it must be left to our own legislature to decide, in what eafes the feizing another's cattle shall amount. to the crime of robbery; and where it shall be a justifiable action, as when a landlord takes them by way

of diftress for rent.

Thus much for the declaratory part of the municipal Directory part. law : and the directory stands much upon the same footing; for this virtually includes the former, the declaration being usually collected from the direction. The law that fays, " Thou shalt not steal," implies a declaration that flealing is a crime. And we have feen, that, in things naturally indifferent, the very effence of right and wrong depends upon the direction of the

laws to do or to omit them.

The remedial part of a law is fo necessary a confequence of the former two, that laws must be very vague and imperfect without it. For in vain would rights be declared, in vain directed to be observed, if there were no method of recovering and afferting those rights when wrongfully with held or invaded. This is what we mean properly, when we fpeak of the protection of the law. When, for instance, the declaratory part of the law has faid, "that the field or inheritance which belonged to Titius's father is vefted by his

death in Titius," 'and the directory part has " forbid- Of Laws den any one to enter on another's property without in general, the leave of the owner ;" if Gaius after this will prefume to take possession of the land, the remedial part of the law will then interpose its office; will make Gaius restore the possession to Titius, and also pay him damages for the invalion.

With regard to the fanction of laws, or the evil that may attend the breach of public duties ; it is obferved, that human legislators have for the most part chosen to make the fanction of their laws rather vindicatory than remuneratory, or to confist rather in punishments than in actual particular rewards: Because, in the first place, the quiet enjoyment and protection of all our civil rights and liberties, which are the fure and general confequence of obedience to the municipal law, are in themselves the best and most valuable of all rewards: because also, were the exercife of every virtue to be inforced by the propofal of particular rewards, it were impossible for any state to furnish stock enough for so profuse a bounty : and farther, because the dread of evil is a much more forcible principle of human actions than the profpect of good. For which reasons, though a prudent beflowing of rewards is sometimes of exquisite use, yet we find that those civil laws, which enforce and enjoin our duty, do feldom, if ever, propose any privilege or gift to fuch as obey the law; but do constantly come armed with a penalty denounced against transgressors, either expressly defining the nature and quantity of the punishment, or else leaving it to the discretion of the judges, and those who are intrusted with the care of putting the laws in execution.

Of all the parts of a law the most effectual is the vin- Vindicadicatory. For it is but loft labour to fay, " Do this, or tory parter avoid that," unlefs we also declare, " This shall be the confequence of your non-compliance." We must therefore observe, that the main strength and force of a law

confilts in the penalty annexed to it. Herein is to be found the principal obligation of human laws.

Legislators and their laws are faid to compel and oblige: not that, by any natural violence, they fo conftiain a man as to render it impossible for him to ack otherwife than as they direct, which is the frict fense of obligation; but because, by declaring and exhibiting a penalty against offenders, they bring it to pass that no man can eatily choose to transgress the law: fince, by reafonof the impending correction, compliance is in a high degree preferable to disobedience. And, even where rewards are proposed as well as punishments threatened, the obligation of the law feems chiefly to confift in the penalty : for rewards, in their nature, can only perfuade and allure; nothing is compulfory but punishment.

It is true, it hath been holden, and very juftly, by. the principal of our ethical writers, that human laws are binding upon mens confeiences. But if that were the only or most forcible obligation, the good only would regard the laws, and the bad would fet them at defiance. And, true as this principle is, it must still be understood with some restriction. It holds, we apprehend, as to rights; and that, when the law has determined the field to belong to Titius, it is a matter of conscience no longer to with-hold or to invade it. So alfo in regard to natural duties, and fuch offences as are

Remedial

part.

Of the in-

terpreta-

tion of

laws.

in general, we are bound by fuperior laws, before those human laws were in being, to perform the one and abitain from the other. But in relation to those laws which enjoin only positive duties, and forbid only such things as are not mala in fe, but mala probibita merely, without any intermixture of moral guilt, annexing a penalty to non-compliance; here feems to be conscience no farther concerned, than by directing a submission to the penalty, in case of our breach of those laws: for otherwife the multitude of penal laws in a flate would not only be looked upon as an impolitic, but would also be a very wicked, thing; if every such law were a fnare for the conscience of the subject. But in these cases the alternative is offered to every man ; " either abstain from this, or submit to such a penalty :" and his conscience will be clear, whichever fide of the alternative he thinks proper to embrace. Thus, by the flatutes for preferving the game, a penalty is denounced against every unqualified person that kills a hare, and against every person who possesses a partridge in August. And so too, by other statutes, pecuniary penalties are inflicted for exercifing trades without ferving an apprenticeship thereto, for erecting cottages without annexing four acres of land to each, for not burying the dead in woollen, for not performing fratute-work on the public roads, and for innumerable other positive misdemeanors. Now these prohibitory laws do not make the transgression a moral offence, or fin: the only obligation in conscience is to submit to the penalty, if levied. It must, however, be observed, that we are here speaking of laws that are simply and purely penal, where the thing forbidden or enjoined is wholly a matter of indifference, and where the penalty inflicted is an adequate compensation for the civil inconvenience supposed to arise from the offence. But where disobedience to the law involves in it also any degree of public mischief or private injury, there it falls within our former distinction, and is also an offence against conscience.

We have now gone through the definition laid down of a municipal law; and have shown that it is " a rule of civil conduct-prescribed-by the supreme power in a state-commanding what is right, and prohibiting what is wrong;" in the explication of which we have endeavoured to interweave a few uleful principles, concerning the nature of civil government, and the obligation of human laws. Before we conclude this part, it may not be amiss to add a few observations concerning the interpretation of laws.

When any doubt arose upon the construction of the Roman laws, the ulage was to flate the case to the emperor in writing, and take his opinion upon it. This was certainly a bad method of interpretation. To interrogate the legislature to decide particular difputes, is not only endless, but affords great room for partiality and oppression. The answers of the empeyor were called his referipts, and thefe had in fucceeding cases the force of perpetual laws; though they ought to be carefully diffinguished, by every rational civilian, from those general conditutions which had only the nature of things for their guide. The emperor Macrinus, as his historian Capitolinus informs us, had once refolved to abolish these rescripts, and retain only the general edicts: he could not bear that the hafty

of Laws mala in fe; here we are bound in confcience, because and crude answers of such princes as Commodus and Of Laws Caracalla should be reverenced as laws. But Justinian in general. thought otherwife, and he has preferved them all. In like manner the canon laws, or decretal epitles of the popes, are all of them referipts in the firiteft fense. Contrary to all true forms of reasoning, they argue from particulars to generals.

The fairest and most rational method to interpret the will of the legislator, is by exploring his intentions at the time when the law was made, by figns the most natural and probable. And these figns are either the words, the context, the subject-matter, the effects and confequence, or the fpirit and reason of the law.

Let us take a short view of them all.

I. Words are generally to be understood in their ufual and most known fignification; not fo much regarding the propriety of grammar, as their general and popular use. Thus the law mentioned by Puffendorf, which forbad a layman to lay hands on a priest, was adjudged to extend to him who had hurt a prieft with a weapon. Again: Terms of art, or technical terms, must be taken according to the acceptation of the learned in each art, trade, and science. So in the act of fettlement, where the crown of England is limited " to the princefs Sophia, and the heirs of her body being Protestants, it becomes necessary to call in the affittance of lawyers, to afcertain the precife idea of the words " heirs of her body;" which in a legal fense comprise only certain of her lineal descendants. Lastly, where words are clearly repugnant in two laws, the latter law takes place of the elder ; leges posteriores priores contrarias abrogant, is a maxim of univerfal law, as well as of our own constitutions. And accordingly it was laid down by a law of the twelve tables at Rome, Quod populus postremum justie, id jus ratum esto.

2 If words happen to be fill disbious, we may establish their meaning from the context; with which it may be of fingular use to compare a word or a sentence, whenever they are ambiguous, equivocal, or intricate. Thus the proeme, or preamble, is often called in to help the construction of an act of parliament. Of the same nature and use is the comparison of a law with other laws that are made by the fame legislator, that have some affinity with the subject, or that expressly relate to the same point. Thus, when the law of England declares murder to be felony without benefit of clergy, we must refort to the same law of England to learn what the benefit of clergy is : and, when the common law censures simoniacal contracts, it affords great light to the subject to consider what the canon law has adjudged to be fimony.

3. As to the subject-matter, words are always to be understood as having a regard thereto; for that is always supposed to be in the eye of the legislator, and all his expressions directed to that end. Thus, when a law of Edward III. forbids all ecclefiaftical perfons to purchase provisions at Rome, it might seem to prohibit the buying of grain and other victual; but when we confider that the flatute was made to reprefs the usurpations of the papal fee, and that the nominations to benefices by the Pope were called provisions, we shall fee that the restraint is intended to be laid upon fuch provisions only.

4. As to the effects and confequence, the rule is,

4 H 2

Of Laws when declared by the municipal laws to be inviolable. in general. On the contrary, no human legislature has power to abridge or destroy them, unless the owner shall himfelf commit some act that amounts to a forfeiture. Neither do divine or natural duties (fuch as, for instance, the worship of God, the maintenance of children, and the like) receive any ftronger fauction from being also declared to be duties by the law of the land. The case is the same as to crimes and misdemeanours, that are forbidden by the fuperior laws, and therefore flyled mala in fe, fuch as murder, theft, and periury ; which contract no additional turpitude from being declared unlawful by the inferior legislature. Remedial part.

Of Laws mala in fe: here we are bound in confcience, because and crude answers of such princes as Commodus and Of Laws in general, we are bound by fuperior laws, before those human laws were in being, to perform the one and abstain from the other. But in relation to those laws which enjoin only politive duties, and forbid only fuch things as are not mala in fe, but mala probibita merely, without any intermixture of moral guilt, annexing a penalty to non-compliance; here feems to be conscience no farther concerned, than by directing a fubmission to the penalty, in case of our breach of those laws: for otherwife the multitude of penal laws in a state would not only be looked upon as an impolitic, but would also be a very wicked, thing ; if every such law were a fnare for the confcience of the fubiect. But in thefe cases the alternative is offered to every man; " either abstain from this, or submit to such a penalty :" and his confcience will be clear, whichever fide of the alternative he thinks proper to embrace. Thus, by the flatutes for preferving the game, a penalty is denounced against every unqualified person that kills a hare, and against every person who possesses a partridge in Auguft. And fo too, by other flatutes, pecuniary penalties are inflicted for exercifing trades without ferving an apprenticeship thereto, for erecting cottages without annexing four acres of land to each, for not burying the dead in woollen, for not performing statute-work on the public roads, and for innumerable other positive misdemeanors. Now these prohibitory laws do not make the transgression a moral offence, or fin: the only obligation in confcience is to fubmit to the penalty, if levied. It must, however, be observed. that we are here speaking of laws that are simply and purely penal, where the thing forbidden or enjoined is wholly a matter of indifference, and where the penalty inflicted is an adequate compensation for the civil inconvenience fupposed to arise from the offence. But where disobedience to the law involves in it also any degree of public mischief or private injury, there it falls within our former diffinction, and is also an offence

against conscience. We have now gone through the definition laid down of a municipal law; and have shown that it is " a rule of civil conduct-prescribed-by the supreme power in a state-commanding what is right, and prohibiting what is wrong;" in the explication of which we have endeavoured to interweave a few ufeful principles, concerning the nature of civil government, and the obligation of human laws. Before we conclude this part, it may not be amifs to add a few observations concerning the interpretation of laws.

When any doubt arose upon the construction of the Roman laws, the ulage was to flate the cafe to the emperor in writing, and take his opinion upon it. This was certainly a bad method of interpretation. To interrogate the legislature to decide particular difputes, is not only endlesa, but affords great room for partiality and oppression. The answers of the empeyor were called his referipts, and thefe had in fucceeding cases the force of perpetual laws; though they ought to be carefully diffinguished, by every rational civilian, from those general constitutions which had only the nature of things for their guide. The emperor Macrinus, as his historian Capitolinus informs us, had once refolved to abolish these rescripts, and retain only the general edicts: he could not bear that the hafty

Caracalla should be reverenced as laws. But Justinian in general, thought otherwise, and he has preserved them all. In like manner the canon laws, or decretal epitles of the popes, are all of them referipts in the strictest fense. Contrary to all true forms of reasoning, they argue from particulars to generals.

The fairest and most rational method to interpret the will of the legislator, is by exploring his intentions at the time when the law was made, by figns the most natural and probable. And these figns are either the words, the context, the subject-matter, the effects and consequence, or the spirit and reason of the law.

Let us take a short view of them all.

I. Words are generally to be understood in their usual and most known fignification; not so much regarding the propriety of grammar, as their general and popular use. Thus the law mentioned by Puffendorf, which forbad a layman to lay hands on a priest. was adjudged to extend to him who had hurt a prieft with a weapon. Again: Terms of art, or technical terms, must be taken according to the acceptation of the learned in each art, trade, and science. So in the act of fettlement, where the crown of England is limited "to the princess Sophia, and the heirs of her body being Protestants, it becomes necessary to call in the affittance of lawyers, to afcertain the precife idea of the words " heirs of her body;" which in a legal fense comprise only certain of her lineal descendants. Lastly, where words are clearly repugnant in two laws, the latter law takes place of the elder ; leges posteriores priores contrarias abrogant, is a maxim of universal law, as well as of our own constitutions. And accordingly it was laid down by a law of the twelve tables at Rome, Quod populus postremum justie, id jus ratum esto.

2 If words happen to be still dubious, we may establish their meaning from the context; with which it may be of fingular use to compare a word or a fentence, whenever they are ambiguous, equivocal, or intricate. Thus the proeme, or preamble, is often called in to help the construction of an act of parliament. Of the same nature and use is the comparison of a law with other laws that are made by the fame legislator, that have some affinity with the subject, or that expressly relate to the same point. Thus, when the law of England declares murder to be felony without benefit of clergy, we must refort to the same law of England to learn what the benefit of clergy is : and, when the common law centures fimoniacal contracts, it affords great light to the subject to consider what the canon law has adjudged to be fimony.

3. As to the subject-matter, words are always to be understood as having a regard thereto; for that is always supposed to be in the eye of the legislator, and all his expressions directed to that end. Thus, when a law of Edward III. forbids all ecclefiaftical perfons to purchase provitions at Rome, it might feem to prohibit the buying of grain and other victual; but when we consider that the statute was made to reprefe the usurpations of the papal fee, and that the nominations to benefices by the Pope were called provisions, we shall fee that the restraint is intended to be laid upon fuch provisions only.

4. As to the effects and consequence, the rule is

4 H 2

Of the intion of laws.

Of Laws That where words hear either none, or a very abfurd in general fignification, if literally understood, we must a little deviate from the received fense of them. Therefore the Bolognian law, mentioned by Puffendorf, which enacted " that whoever drew blood in the streets should be punished with the utmost severity," was held after long debate not to extend to the furgeon who opened the vein of a person that fell down in the street with a

27

5. But, laftly, the most universal and effectual way of discovering the true meaning of a law, when the words are dubious, is by confidering the reason and spirit of it, or the cause which moved the legislator to enact it. For when this reason ceases, the law itself ought likewife to ceafe with it. An inflance of this is given in a case put by Cicero, or whoever was the author of the rhetorical treatife infcribed to Herennius. There was a law, That those who in a storm forfook the ship should forseit all property therein, and the ship and lading should belong entirely to those who staid in it. In a dangerous tempest, all the mariners forfook the thip, except only one fick paffenger, who by reason of his disease was unable to get out and escape. By chance the ship came fafe to port. The fick man kept possession, and claimed the benefit of the law. Now here all the learned agree, that the fick man is not within the reason of the law; for the reason of making it was, to give encouragement to fuch as should venture their lives to fave the vessel: but this is a merit which he could never pretend to, who neither staid in the ship upon that account, nor contributed any thing to its preservation.

[28] 34 Equity.

From this method of interpreting laws by the reafon of them, arises what we call equity: which is thus defined by Grotius, " the correction of that, wherein the law (by reason of its universality) is deficient." For fince in laws all cases cannot be foreseen or expresfed, it is necessary, that, when the general decrees of the law come to be applied to particular cases, there Of Laws should be somewhere a power vested of defining those in general circumstances, which (had they been foreseen) the legislator himself would have expressed. And these are the cases which, according to Grotius, " lex non exalle

definit, sed arbitrio boni viri permittit." Equity thus depending, effentially, upon the particular circumftances of each individual case, there can be no established rules and fixed precepts of equity laid down, without destroying its very effence, and reducing it to a positive law. And, on the other hand, the liberty of confidering all cases in an equitable light must not be indulged too far; left thereby we destroy all law. and leave the decision of every question entirely in the breaft of the judge. And law, without equity, though hard and difagreeable, is much more defirable for the public good, than equity without law; which would make every judge a legislator, and introduce most infinite confusion; as there would then be almost as many different rules of action laid down in our courts, as there are differences of capacity and fentiment in the human

HAVING thus confidered the nature of laws in gene- plan of the ral, we shall proceed to give a view of the particular two follows law of our own country; I. Of England; 2. Of Scot-ing parts. land. The English law, however, being too extensive to admit of detail in a body, we can only here give fuch a. sketch of it as may be sufficient to show the connection of its parts; but the principal of these parts themselves are explained at large, under their proper names, in the general alphabet .- A contrary method is followed with regard to the law of Scotland. This being less extensive, is given in a body, with all its parts not only in regular connection, but sufficiently explained ; these parts, again, not being explained in the order of the alphabet, but marked with numerical references to their explanations in the fystem.

PART II. THE LAW OF ENGLAND.

INTRODUCTION.

THE municipal law of England, or the rule of civil conduct prescribed to the inhabitants of that kingdom, may with sufficient propriety be divided into two kinds: the lex non fcripta, the unwritten or common law; and the lex fcripta, the written or flatute

The lex non feripta, or unwritten law, includes not only general customs, or the common law properly fo called; but also the particular customs of certain parts of the kingdom, and likewife thefe particular laws that are by cultom observed only in certain courts and jurifdictions.

In calling thefe parts of the law leges non fcripte, we would not be understood as if all those laws were at present merely oral, or communicated from the former ages to the present folely by word of mouth. It is true indeed, that in the profound ignorance of letters which formerly overfpread the whole western world, all laws were entirely traditional; for this plain reason, that the nations among which they prevailed had but little idea of writing. Thus the British as well as the

Gallic druids committed all their laws as well as learning to memory; and it is faid of the primitive Saxons here, as well as their brethren on the continent, that leges fola memoria et ufu retinebant. But, with us at prefent, the monuments and evidences of our legal cuftoms are contained in the records of the feveral courts of justice, in books of reports and judicial decisions, and in the treatifes of learned fages of the profession, preserved and handed down to us from the times of highest antiquity. However, we therefore style these parts of our law leges non fcripte, because their original inflitution and authority are not fet down in writing, as acts of parliament are; but they receive their binding power, and the force of laws, by long and immemorial usage, and by their universal reception throughout the kingdom: in like manner as Aulus. Gellius defines the jus non scriptum to be that which is tacito et illiterato hominum consensu et moribus expressum.

Our ancient lawyers, and particularly Fortescue, infift with abundance of warmth, that these customs. are as old as the primitive Britons, and continued down. through the feveral mutations of government and in-

England.

habitants, to the present time, unchanged and unadulterated. This may be the case as to some. But in general, as Mr Selden in his notes observes, this affertior must be understood with many grains of allowance; and ought only to fignify, as the truth feems to be, that there never was any formal exchange of one fyftem of laws for another: though doubtless, by the intermixture of adventitious nations, the Romans, the Picts, the Saxons, the Danes, and the Normans, they must have infensibly introduced and incorporated many of their own customs with those that were before established; thereby, in all probability, improving the texture and wifdom of the whole, by the accumulated wifdom of divers particular countries. Our laws. faith lord Bacon, are mixed as our language; and as our language is fo much the richer, the laws are the more complete.

And indeed our antiquarians and first historians do all positively assures, that our body of laws is of this compounded nature. For they tell us, that in the time of Alfred the local cuftoms of the feveral provinces of the kingdom were grown fo various, that he found it expedient to compile his dome book, or liber judicialis, for the general use of the whole kingdom. This book is faid to have been extant fo late as the reign of Edward IV. but is now unfortunately loft. It contained, we may probably suppose, the principal maxims of the common law, the penalties for mildemeanors, and the forms of judicial proceedings. Thus much may at least be collected from that injunction to observe it, which we find in the laws of king Edward the elder, the fon of Alfred. Omnibus qui reipublica prafunt etiam atque etiam mando, ut omnibus aquos se prabeant ju dices, perinde ac in judiciali libro scriptum babetur : nec quiquam formident quin jus commune audacter libereque dicant.

But the irruption and establishment of the Danes in England, which followed foon after, introduced new customs, and caused this code of Alfred in many provinces to fall into difuse, or at least to be mixed and debased with other laws of a coarser alloy. So that, about the beginning of the 11th century there were three principal fystems of laws prevailing in different diffricts. 1. The Mercen Lage, or Mercian laws, which were observed in many of the inland counties, and those bordering on the principality of Wales, the retreat of the ancient Britons; and therefore very probably intermixed with the British or Druidical cufloms. 2 The West Saxon Lage, or laws of the West Saxons, which obtained in the counties to the fouth and west of the island, from Kent to Devonshire. These were probably much the same with the laws of Alfred above mentioned, being the municipal law of the far most considerable part of his dominions, and particularly including Berkshire, the feat of his peculiar refidence. 3. The Dane Lage, or Danish law, the very name of which speaks its original and composition. This was principally maintained in the rest of the midland counties, and also on the eattern coaft, the part most exposed to the visits of that piratical people. As for the very northern provinces, they were at that time under a diffinct government.

Out of these three laws, Roger Hoveden and Ranulphus Ceftrenfis informs us, king Edward the confeffor extracted one uniform law, or digest of laws, to be observed throughout the whole kingdom; though

Hoveden and the author of an old manuscript chronicle affure us likewife, that this work was projected and begun by his grandfather king Edgar. And indeed a general digest of the same nature has been constantly found expedient, and therefore put in practice by other great nations, which were formed from an affemblage of little provinces, governed by peculiar customs. As in Portugal, under king Edward, about the beginning of the 15th century. In Spain, under Alonzo X. who about the year 1250 executed the plan of his father St Ferdinand, and collected all the provincial customs into one uniform law, in the celebrated code entitled las partidas. And in Sweden, about the same era, a univerfal body of common law was compiled out of the particular customs established by the laghman of every province, and entitled the land's lagh, being analogous to the common law of England.

Both these undertakings, of king Edgar and Edward the Confessor, seem to have been no more than a new edition, or fresh promulgation, of Alfred's code or dome-book, with fuch additions and improvements as the experience of a century and an half had fuggetted. For Alfred is generally flyled by the same historians the legum Anglicanarum conditor, as Edward the confeffor is the restitutor. These, however, are the laws which our histories so often mention under the name of the laws of Edward the Confessor; which our anceftors struggled fo hardly to maintain, under the first princes of the Norman line; and which subsequent princes fo frequently promifed to keep and to reftore. as the most popular act they could do, when pressed by foreign emergencies or domestic discontents. These are the laws, that fo vigoroufly withflood the repeated attacks of the civil law; which established in the 12th century a new Roman empire over the most of the flates on the continent: flates that have loft, and perhaps upon that account, their political liberties: while the free conflitution of England, perhaps upon the fame account, has been rather improved than debased. These, in short, are the laws which gave rise and origin to that collection of maxims and customs which is now known by the name of the common law. A name either given to it, in contradiffinction to other Common laws, as the flatute law, the civil law, the law merchant, law. and the like; or, more probably, as a law common to all the realm, the jus commune or folcright, mentioned by king Edward the Elder, after the abolition of the feveral provincial customs and particular laws before mentioned.

But though this is the most likely foundation of this collection of maxims and customs; yet the maxims and cultoms, fo collected, are of higher antiquity than memory or history can reach: nothing being more difficult than to afcertain the precife beginning and first spring of an ancient and long established custom. Whence it is, that in our law the goodness of a custom. depends upon its having been used time out of mind ; or, in the folemnity of our legal phrase, time whereof the memory of man runneth not to the contrary. This it is that gives it its weight and authority; and of this nature are the maxims and cuftoms which compose the common law, or lex non scripta, of this kingdom.

This unwritten, or common law, is properly distinguishable into three kinds: 1. General customs: which are the universal rule of the whole kingdom,,

W.

Law of and form the common law in its firster and more ufual fignification. 2. Particular cultoms; which for the most part affect only the inhabitants of particular diffricts. 3. Certain particular laws; which by cuftom are adopted and used by some particular courts, of pretty

First branch of the unwritten law: General cuftoms.

general and extensive juridiction. I. As to general customs, or the common law properly fo called; this is that law, by which proceedings and determinations in the king's ordinary courts of iuflice are guided and directed. This, for the most part, fettles the course in which lands descend by inheritance: the manner and form of acquiring and transferring property; the folemnities and obligation of contracts; the rules of expounding wills, deeds, and acts of parliament; the respective remedies of civil injuries; the feveral species of temporal offences, with the manner and degree of punishment, and an infinite number of minuter particulars, which diffuse themselves as extensively as the ordinary distribution of common justice requires. Thus, for example, that there shall be four superior courts of record, the chancery, the king's bench, the common pleas, and the exchequer :- that the eldeft fon alone is heir to his ancestor :- that property may be acquired and transferred by writing ;-that a deed is of no validity unless fealed and delivered ;-that wills shall be construed more favourably, and deeds more frictly ;-that money lent upon bond is recoverable by action of debt : -that breaking the public peace is an offence, and punishable by fine and imprisonment:-all these are doctrines that are not set down in any written statute or ordinance; but depend merely upon immemorial sufage, that is, upon common law, for their support. Some have divided the common law into two prin-

cipal grounds or foundations: 1. Established customs; fuch as that, where there are three brothers, the eldeft brother shall be heir to the second, in exclusion of the youngest: and, 2. Established rules and maxims; as, 44 that the king can do no wrong, that no man shall 45 be bound to accuse himself, 2 and the like. But these seem to be one and the same thing. For the authority of these maxims rests entirely upon general reception and usage; and the only method of proving that this or that maxim is a rule of the common law. is by showing that it hath been always the custom to

observe it.

But here a very natural, and very material, question arises: How are these customs or maxims to be known. and by whom is their validity to be determined? The answer is, By the judges in the several courts of justice. They are the depository of the laws; the living oracles who must decide in all cases of doubt, and who are bound by an oath to decide according to the law of the land. Their knowledge of that law is derived from experience and fludy; from the viginti annorum lucubrationes, which Fortescue mentions; and from being long personally accustomed to the judicial decisions of their predecessors. And indeed these judicial decisions are the principal and most authoritative evidence, that can be given, of the existence of such a custom as shall form a part of the common law. The judgment itself, and all the proceedings previous thereto, are carefully registered and preserved under the name of records, in public repositories set apart for that particular purpose; and to them frequent recourse is had, when any critical question arises, in the determination of which for-

mer precedents may give light or affiftance. And therefore, even so early as the conquest, we find the prateritorum memoria eventorum reckoned up as one of the chief-qualifications of those who were held to be legibus patrie optime instituti. For it is an established rule, To abide by former precedents, where the fame points come again in litigation: as well to keep the scale of justice even and steady, and not liable to waver with every new judge's opinion; as also because the law in that case being solemnly declared and determined, what before was uncertain, and perhaps indifferent. is now become a permanent rule, which it is not in the breaft of any subsequent judge to alter or vary from according to his private fentiments: he being fworn to determine, not according to his own private judgement, but according to the known laws and customs of the land; not delegated to pronounce a new law, but to maintain and expound the old one. Yet this rule admits of exception, where the former determination is most evidently contrary to reason; much more if it be contrary to the divine law. But, even in fuch cases, the subsequent judges do not pretend to make a new law, but to vindicate the old one from mifreprefentation. For if it be found that the former decision is manifestly absurd or unjust, it is declared, not that fuch a fentence was bad law, but that it was not law # that is, that it is not the established custom of the realm, as has been erroueously determined. And hence it is that our lawyers are with juffice fo copious in their encomiums on the reason of the common law; that they tell us, that the law is the perfection of reason. that it always intends to conform thereto, and that what is not reason is not law. Not that the particular reason of every rule in the law can at this distance of time be always precifely affigned; but it is sufficient that there be nothing in the rule flatly contradictory to reason, and then the law will presume it to be well founded. And it hath been an ancient observation in the laws of England, that whenever a standing rule of law, of which the reason perhaps could not be remembered or difcerned, hath been wantonly broke in upon by flatutes or new resolutions, the wisdom of the rule hath in the end appeared from the inconveniences that have followed the innovation.

The doctrine of the law then is this : That precedents and rules must be followed, unless flatly absurd or unjust: for though their reason be not obvious at first view, yet we owe such a deference to former times, as not to suppose they acted wholly without consideration. To illustrate this doctrine by examples. It has been determined, time out of mind, that a brother of the half blood shall never succeed as heir to the estate of his half brother, but it shall rather escheat to the king, or other superior lord. Now this is a positive law, fixed and eftablished by custom; which custom is evidenced by judicial decisions; and therefore can never be departed from by any modern judge without a breach of his oath and the law. For herein there is nothing repugnant to natural juffice; though the artificial reason of it, drawn from the feodal law, may not be quite obvious to every body. And therefore, on account of a supposed bardship upon the half brother, a modern judge might wish it had been otherwise fettled; yet it is not in his power to alter it. But if any court were now to determine, that an elder brother of the half blood might enter upon and feize any

Law of lands that were purchased by his younger brother, no Bagland, Subsequent judges would foruple to declare that fuch prior determination was unjust, was unreasonable, and therefore was not law. So that the law, and the opinion of the judge, are not always convertible terms, or one and the same thing; fince it sometimes may happen that the judge may miltake the law. Upon the whole, however, we may take it as a general rule, " That the decifions of courts of jultice are the evidence of what is common law;" in the fame manner as in the civil law, what the emperor had once determined was to ferve for a guide for the future.

The decisions therefore of courts are held in the highest regard, and are not only preserved as authentic records in the treasuries of the several courts, but are handed out to public view in the numerous volumes of reports which furnish the lawyer's library. These reports are hiltories of the feveral cases, with a short fummary of the proceedings, which are preferved at large in the record; the arguments on both fides, and the reasons the court gave for its judgment; taken down in fhort notes by persons prefent at the determination. And thefe ferve as indexes to, and also to explain, the records; which always, in matters of confequence and nicety, the judges direct to be fearched. The reports are extant in a regular feries from the reign of king Edward II. inclusive; and from his time to that of Henry VIII. were taken by the prothonotaries, or chief scribes of the court, at the expence of the crown, and published annually, whence they are known under the denomination of the yearbooks. And it is much to be wished that this beneficial cuftom had, under proper regulations, been continued to this day; for though king James I. at the instance of lord Bacon, appointed two reporters, with a handfome ftipend, for this purpole; yet that wife institution was foon neglected, and from the reign of Henry VIII. to the prefent time this task has been executed by many private and cotemporary hands; who fometimes through hafte and inaccuracy, fometimes through mistake and want of skill, have published very erude and imperfect (perhaps contradictory) accounts of one and the fame determination. Some of the most valuable of the ancient reports are those published by lord chief justice Coke; a man of infinite learning in his profession, though not a little infected with the pedantry and quaintness of the times he lived in, which appear strongly in all his works. However, his writings are fo highly efteemed, that they are generally cited without the author's name (A).

Besides these reporters, there are also other authors. to whom great veneration and respect are paid by the ftudents of the common law. Such are Glanvil and Bracton, Britton and Fleta, Littleton and Fitzherbert,

with some others of ancient date, whose treatifes are Law of cited as authority; and are evidence that cases have England, formerly happened in which fuch and fuch points were determined, which are now become fettled and first principles. One of the last of these methodical writers in point of time, whose works are of any intrinsic authority in the courts of justice, and do not entirely depend on the strength of their quotations from older authors, is the same learned judge we have just mentioned, Sir Edward Coke; who hath written four volumes of Inflitutes, as he is pleased to call them, tho? they have little of the institutional method to warrant fuch a title. The first volume is a very extensive comment upon a little excellent treatife of tenures. compiled by judge Littleton in the reign of Edward IV. This comment is a rich mine of valuable common-law learning, collected and heaped together from the ancient reports and year-books, but greatly defective in method (B). The fecond volume is a comment upon many old acts of parliament, without any fythematical order; the third a more methodical treatife of the pleas of the crown; and the fourth an account of the feveral faccies of courts (c).

And thus much for the first ground and chief cornerstone of the laws of England; which is general immemorial cultom, or common law, from time to time declared in the decifions of the courts of justice; which decisions are preserved among the public records, explained in the reports, and digested for general use in the authoritative writings of the venerable fages of the

The Roman law, as practifed in the times of its liberty, paid also a great regard to custom; but not for much as our law: it only then adopting it when the written law was deficient. Though the reasons alleged in the digest will fully justify our practice in making it of equal authority with, when it is not contradicted by, the written law. " For fince (favs Inlianus) the written law binds us for no other reason but because it is approved by the judgment of the people, therefore those laws which the people have approved without writing ought also to bind every body. For where is the difference, whether the people declare their affent to a law by suffrage, or by a uniform course of acting accordingly?" Thus did they reason while Rome had fome remains of her freedom; but, when the imperial tyranny came to be fully established, the civil laws speak a very different language. Quod principi placuit legis babet vigorem, cum populus ei et in eum onine suum imperium et potestatem conferat, says Ulpian. Imperator folus et conditor et interpres legis existimatur, fays the code. And again, Sacrilegii instar est rescripto principis obviari. And indeed it is one of the characteriftic marks of British liberty, that the common law depends

⁽A) His reports, for instance, are styled xar 1500xx, " the reports;" and in quoting them we usually say, For 2 Rep. not 1 or 2 Coke's Rep. as in citing other authors. The reports of judge Croke are also cited in a peculiar manner, by the name of those princes in whose reigns the cases reported in his three volumes were determined; viz. queen Elizabeth, king James, and king Charles I.; as well as by the number of each volume. For foretimes we call them 1, 2, and 3 Cro.; but more commonly Cro. Eliz. Cro. Jac. and Cro. Car.

⁽B) It is usually cited either by the name of Co. Litt. or as I Inst.

⁽c) These are cited as 2, 3, or 4 Inft. without any author's name. An honorary distinction, which, waobserved, is paid to the works of no other writer; the generality of reports and other tracts being quoted in the name of the compiler, as 2 Ventris, 4 Leonard, 1 Siderfin, and the like.

40 Second branch of .

Particular

cuftoms.

Law of depends upon cuftom; which carries this internal evi- prove, that fuch cuftoms actually exift, but only that England. dence of freedom along with it, that it probably was introduced by the voluntary confent of the people.

II. The fecond branch of the unwritten laws of England are particular customs, or laws which affect the unwrite only the inhabitants of particular diffricts. ten laws :

These particular customs, or some of them, are without doubt the remains of that multitude of local cuftoms before-mentioned, out of which the common law, as it now flands, was collected at first by king Alfred, and afterwards by king Edgar and Edward the confessor; each district mutually facrificing some of its own special usages; in order that the whole kingdom might enjoy the benefit of one uniform and universal system of laws. But, for reasons that have been now long forgotten, particular counties, cities, towns, manors, and lordships, were very early indulged with the privilege of abiding by their own cuftoms, in contradiffinction to the rest of the nation at large : which privilege is confirmed to them by feveral acts of parliament.

Such is the cultom of gavelkind in Kent and some other parts of the kingdom (though perhaps it was also general till the Norman conquest); which ordains, among other things, that not the eldeft fon only of the father shall succeed to his inheritance, but all the fons alike; and that, though the ancestor be attainted and hanged, yet the heir shall succeed to his estate, without any escheat to the lord .- Such is the custom that prevails in divers ancient boroughs, and therefore called borough-english, that the youngest fon shall inherit the estate, in preserence to all his elder brothers .- Such is the cultom in other boroughs, that a widow shall be entitled, for her dower, to all her husband's lands; whereas at the common law she shall be endowed of one third part only .- Such also are the special and particular customs of manors, of which every one has more or less, and which bind all the copyhold tenants that hold of the faid manors .- Such likewife is the custom of holding divers inferior courts, with power of trying causes, in cities and trading towns; the right of holding which, when no royal grant can be shown, depends entirely upon immemorial and established usage. - Such, lastly, are many particular cufloms within the city of London, with regard to trade, apprentices, widows, orphans, and a variety of other matters. All these are contrary to the general law of the land, and are good only by special usage; though the customs of London are also confirmed by act of parliament.

To this head may most properly be referred a particular fystem of customs used only among one set of the king's fubjects, called the cuftom of merchants, or less mercatoria: which, however different from the general rules of the common law, is yet ingrafted into it, and made a part of it; being allowed, for the benefit of trade, to be of the utmost validity in all commercial transactions; for it is a maxim of law, that cuilibet in

fua arte credendum eft.

The rules relating to particular customs regard either the proof of their existence; their legality when proved; or their usual method of allowance. And first we will confider the rules of proof.

As to gavelkind, and borough english, the law takes particular notice of them; and there is no occasion to Nº 176.

the lands in question are subject thereto. All other England private customs must be particularly pleaded; and as well the existence of such customs must be shown, as that the thing in dispute is within the custom alleged. The trial in both cases (both to show the existence of the cuftom, as, " that in the manor of Dale lands shall descend only to the heirs male, and never to the heirs female;" and also to show " that the lands in question are within that manor") is by a jury of 12 men, and not by the judges; except the fame particular custom has been before tried, determined, and recorded, in the fame court.

The customs of London differ from all others in point of trial: for if the existence of the custom be brought in question, it shall not be tried by a jury, but by certificate from the lord mayor and aldermen by the mouth of their recorder; unless it be such a cufrom as the corporation is itself interested in, as a right of taking toll, &c. for then the law permits them

not to certify on their own behalf.

When a custom is actually proved to exist, the next inquiry is into the legality of it; for if it is not a good custom, it ought to be no longer used. Malus usus abolendus eft, is an established maxim of the law. To make a particular custom good, the following are necessary requifites.

1. That it have been used so long, that the memory of man runneth not to the contrary. So that, if any one can show the beginning of it, it is no good cuftom. For which reason, no custom can prevail against an express act of parliament; since the flatute itself is a proof of a time when such a custom did not exift.

2. It must have been continued. Any interruption would cause a temporary ceasing: the revival gives it a new beginning, which will be within time of memory, and thereupon the custom will be void. But this mult be understood with regard to an interruption of the right; for an interruption of the possession only. for 10 or 20 years, will not destroy the custom. As if the inhabitants of a parish have a customary right of watering their cattle at a certain pool, the cuftom is not destroyed though they do not use it for 10 years; it only becomes more difficult to prove: but if the right be any how discontinued for a day, the cuftom is quite at an end.

3. "It must have been peaceable, and acquiesced in; not subject to contention and dispute. For as customs owe their original to common confent, their being immemorially disputed, either at law or otherwise, is a

proof that fuch confent was wanting.

4. Customs must be reasonable; or rather, taken negatively, they must not be unreasonable. Which is not always, as Sir Edward Coke fays, to be understood of every unlearned man's reason; but of artificial and legal reason, warranted by authority of law. Upon which account a custom may be good, though the particular reason of it cannot be assigned; for it sufficeth, if no good legal reason can be assigned against it. Thus a custom in a parish, that no man shall put his beafts into the common till the third of October, would be good; and yet it would be hard to show the reason why that day in particular is fixed upon, rather than the day before or after. But a custom, that no cattle

Law of shall be put in till the lord of the manor has first put in because it is most plain, that it is not on account of Law of his, is unreasonable, and therefore bad; for peradven- their being written laws, that either the canon law, or England. ture the lord will never put in his; and then the te- the civil law, have any obligation within this kingdom;

nants will lose all their profits.

lands shall descend to the most worthy of the owner's blood, is void; for how shall this worth be determined? but a custom to descend to the next male of the blood exclusive of females, is certain, and therefore good. A custom to pay two pence an acre in lieu of tithes, is good; but to pay fometimes two pence a I fometimes three pence, as the occupier of the land pleafes, is bad for its uncertainty. Yet a cuftom, to pay a year's improved value for a fine on a copyhold citate, is good; though the value is a thing uncertain; for the value may at any time be afcertained; and the maxim of law is, Id certum eft, quod certum reddi poteft.

6. Customs, though established by confent, must be (when established) compulsory : and not left to the option of every man, whether he will use them or no. Therefore a cuttom, that all the inhabitants shall be rated toward the maintenance of a bridge, will be good; but a custom, that every man is to contribute thereto at his own pleasure, is idle and absurd, and indeed no

eustom at all.

. 7. Lastly, customs must be confishent with each other. One cultom cannot be fet up in opposition to another. For if both are really customs, then both are of equal antiquity, and both established by mutual confent: which to fay of contradictory cultoms, is abfurd. Therefore, if one man prescribes that by custom he has a right to have windows looking into another's garden; the other caunot claim a right by custom to stop up or obstruct those windows; for these two contradictory cuttoms cannot both be good, nor both fland together, He ought rather to deny the existence of the former

Next, as to the allowance of special customs. Cuftoms, in derogation of the common law, must be conftrued firictly. Thus, by the cultom of gavelkind, an infant of 15 years may by one species of conveyance (called a deed of feoffment) convey away his lands in fee fimple, or for ever. Yet this custom does not impower him to use any other conveyance, or even to lease them for feven years : for the custom must be strictly purfued. And, moreover, all special customs must submit to the king's prerogative. Therefore, if the king purchases lands of the nature of gavelkind, where all the fons inherit equally; yet, upon the king's demife, his eldest fon thall succeed to those lands alone. And thus much for the fecond part of the leges non fcripta, or those particular customs which affect particular perfons or diffricts only.

III. The third branch of them are those peculiar laws branch of

the unwrit- derstood the civil and canon laws. ten law.

It may feem a little improper, at first view, to rank these laws under the head of leges non scripte, or unwritten laws, feeing they are fet forth by authority in their pandects, their codes, and their institutions; their councils, decrees, and decretals; and enforced by piled, A. D. 438, being a methodical collection of tifes of the learned in both branches of the law. But Theodofian code was the only book of civil law rethis is done after the example of Sir Matthew Hale, ceived as authentic in the wettern part of Europe, till Vos. IX. Part. II.

neither do their force and efficacy depend upon their 5. Customs ought to be certain. A custom, that own intrinsic authority; which is the case of our written laws or acts of parliament. They bind not the subjects of England, because their materials were collected from popes or emperors; were digested by Juftinian, or declared to be authentic by Gregory. These confiderations give them no authority here; for the legiflature of England doth not, nor ever did, recognize any foreign power, as superior or equal to it in this kingdom; or as having the right to give law to any the meanest of its subjects. But all the strength that either the papal or imperial laws have obtained in this realm (or indeed in any other kingdom in Europe) is only because they have been admitted and received by immemorial usage and cultom in some particular cases, and fome particular courts; and then they form a branch of the leges non scripte, or customary law: or elfe, because they are in some other cases introduced by confent of parliament, and then they owe their validity to the leges scripte, or statute law. This is expressly declared in those remarkable words of the flatute 25 Hen. VIII. c. 21. addressed to the king's royal maiefty .- "This your grace's realm, recognizing no fuperior under God but only your grace, hath been and is free from subjection to any man's laws, but only to fuch as have been devifed, made, and ordained within this realm for the wealth of the fame; or to fuch other as, by fufferance of your grace and your procenitors, the people of this your realm have taken at their free liberty, by their own confent, to be used among them; and have bound themselves by long use and custom to the observance of the same : not as to the observance of the laws of any foreign prince, potentate, or prelate; but as to the customed and ancient laws of this realm, originally established as laws of the same, by the faid fufferance, confents, and custom; and none otherwise."

1. By the civil law, absolutely taken, is generally understood the civil or municipal law of the Roman empire, as comprised in the institutes, the code, and the digest of the emperor Justinian, and the novel constitutions of himfelf and some of his successors; of which it may not be amifs to give a fhort and general ac-

The Roman law (founded first upon the regal conflitutions of their ancient kings, next upon the 12 tables of the decemviri, then upon the laws or flatutes enacted by the fenate or people, the edicts of the prætor, and the responsa prudentum or opinions of learned lawyers, and lastly upon the imperial decrees or constitutions of fuccessive emperors) had grown to so great a which by custom are adopted and used only in certain bulk, or, as Livy expresses it, tam immensus alianum peculiar courts and jurifdictions. And by these are un- fuper alias accervatarum legum cumulus, that they were computed to be many camels load by an author who preceded Justinian. This was in part remedied by the collections of three private lawyers, Gregorius, Hermogenes, and Papirius; and then by the emperor Theodofius the younger, by whose orders a code was coman immense number of expositions, decisions, and trea- all the imperial conditations then in force : which

包括

England, the Franks and Goths might frequently pay fome regard, in framing legal constitutions for their newly crefted kingdoms. For Justinian commanded only in the eastern remains of the empire; and it was under his auspices, that the present body of civil law was compiled and finished by Tribonian and other lawyers,

about the year 533. This confifts of, 1. The inflitutes; which contain the elements or first principles of the Roman law, in four books. 2. The digerts or pandects, in 50 books; containing the opinions and writings of eminent lawvers, digested in a systematical method, q. A new code, or collection of imperial constitutions; the lapse of a whole century having rendered the former code of Theodofius imperfect. 4. The novels, or new conflitutions, posterior in time to the other books, and amounting to a supplement to the code; containing new decrees of fucceffive emperors, as new questions happened to arife. These form the body of Roman law, or corpus juris civilis, as published about the time of Justinian: which, however, fell foon into neglect and oblivion, till about the year 1130, when a copy of the digests was found at Amalfi in Italy; which accident. concurring with the policy of the Roman ecclefiaftics, fuddenly gave new vogue and authority to the civil law, introduced it into feveral nations, and occasioned that mighty inundation of voluminous comments, with which this fystem of law, more than any other, is now loaded.

2. The canon law is a body of Roman ecclefiaftical Canon law, law, relative to fuch matters as that church either has, or pretends to have, the proper jurifdiction over. This is compiled from the opinions of the ancient Latin fathers, the decrees of general councils, the decretal epiftles and bulls of the holy fee. All which lay in the same disorder and confusion as the Roman civil law: till, about the year 1151, one Gratian an Italian monk, animated by the discovery of Justinian's pandects, reduced the ecclefiaffical conflitutions also into fome method, in three books ; which he entitled Concordia discordantium canonum, but which are generally known by the name of Decretum Gratiani. Thefe reached as low as the time of Pope Alexander III. The fubfequent papal decrees, to the pontificate of Gregory IX. were published in much the same method under the auspices of that pope, about the year 1230, in five books; entitled Decretalia Gregoril noni. A fixth book was added by Boniface VIII. about the year 1298, which is called Sextus Decretalium. Clementine conftitutions, or decrees of Clement V, were in like manner authenticated in 1317 by his fucceffor John XXII.; who also published 20 constitutions of his own, called Extravagantes Joannie: all which in some measure answer to the novels of the civil law. To these have been fince added some decrees of later popes in five books, called Extravagantes Communes. And all these together, Gratian's decree, Gregory's decretals, the fixth decretal, the Clementine conflitutions, and the Extravagants of John and his fuccessors, form the corpus juris canonici, or body of the Roman

> canon law. Befides these pontifical collections, which during the times of popery were received as authentic in this ifland, as well as in other parts of Christendom, there

"Law of," many centuries after; and to this it is probable that is also a kind of national canon law, compesed of legatine and provincial conflitutions, and adapted only lingland to the exigencies of this church and kingdom. The legatine conflitutions were ecclefiaftical laws, enacted in national fynods, held under the cardinals Otho and Othobon, legates from Pope Gregory IX, and Pope Clement IV. in the reign of King Henry III. about the years 1220 and 1268. The provincial conflitutions are principally the decrees of provincial fynods. held under divers archbishops of Canterbury, from Stephen Langton in the reign of Henry III, to Henry Chichele in the reign of Henry V.; and adopted also by the province of York in the reign of Henry VI. At the dawn of the reformation, in the reign of King Henry VIII. it was enacted in parliament, that a review should he had of the canon law; and till such review should be made, all canons, constitutions, ordinances and fynodals provincial, being then already made, and not repugnant to the law of the land or the king's prerogative, should still be used and executed. And, as no fuch review has yet been perfected, upon this statute now depends the authority of the canon law in England.

As for the canons enacted by the clergy under James I. in the year 1603, and never confirmed in parliament, it has been folemnly adjudged upon the principles of law and the constitution, that where they are not merely declaratory of the ancient canon law, but are introductory of new regulations, they do not bind the laity, whatever regard the clergy may think proper to pay them,

There are four species of courts, in which the civil and canon laws are permitted under different refirictions to be used. I. The courts of the archbishops and bishops, and their derivative officers; usually called courts Christian, (curie Christianitatis), or the acelefiaftical courts. 2. The military courts. 3. The courts of admiralty. 4. The courts of the two universities. In all, their reception in general, and the different degrees of that reception, are grounded entirely upon custom; corroborated in the latter instance by act of parliament, ratifying those charters which confirm the customary law of the universities. The more minute confideration of them will fall under their proper articles. It will fuffice at prefent to remark a few particulars relative to them all, which may ferve to inculcate more firongly the doctrine laid down concerns

1. And first, the courts of common law have the fuperintendency over these courts; to keep them within their jurisdictions; to determine wherein they exceed them; to restrain and prohibit such excess; and (in case of contumacy) to punish the officer who executes, and in some cases the judge who enforces, the sentence so declared to be illegal.

ing them.

2. The common law has referved to itself the expofition of all fuch acts of parliament, as concern either the extent of these courts, or the matters depending before them. And therefore, if these courts either refuse to allow these acts of parliament, or will expound them in any other fense than what the common law puts upon them, the king's courts at Westminster will grant prohibitions to reflrain and control them.

3. An appeal lies from all these courts to the king. in the last refort; which proves that the jurisdiction

W.

England.

Law of exercised in them is derived from the crown of England, and not from any foreign potentate, or intrinfig authority of their own, -And, from these three strong marks and enfigns of funeriority, it appears beyond a doubt, that the civil and canon laws, though admitted in some cases by custom in some courts, are only subordinate and leges fub gravieri lege; and that thus ad. mitted, restrained, altered, new-modelled, and amend. ed, they are by no means with us a diffinct independent species of laws, but are inferior branches of the euftomary or unwritten laws of England, properly called the kings ecclefiaftical, the king's military, the king's maritime, or the king's academical, laws.

The written laws.

Elatures.

Let us next proceed to the leges feripte, the written laws of the kingdom; which are flatutes, acts, or edicts, made by the king's majefty, by and with the advice of the lords spiritual and temporal and commons in parliament affembled. The oldest of these now extant, and printed in our flatute books, is the famous magna charta, as confirmed in parliament o Hea. III. though doubtlefs there were many acts before that time, the records of which are now loft, and the determinations of them perhaps at prefent currently received for the maxims of the old common law,

The manner of making these statutes being explained under the articles BILL and PARLIAMENT, we shall here only take notice of the different kinds of flatutes; and of some general rules with regard to their construc-

tion (p).

First, as to their feveral kinds. Statutes are either general or frecial, public or private. A general or public act is an universal tudy they regards the whole community; and of this the courts of law are upon to take notice judicially and ex officie, without the ftatute being particularly pleaded, or formerly fet forth, by the party who claims an advantage under it. Special or private acts are rather exceptions than rules, being those which only operate upon particular persons and private concerns; fuch as the Romans entitled fenatus decreta, in contradiftinction to the fenatus confulta, which regarded the whole community; and of thefe the judges are not bound to take notice, unless they be formally shewn and pleaded. Thus, to shew the diffinction, the flatute 13 Eliz. c. 10. to prevent spiritual persons from making leases for longer terms than 21 years or three lives, is a public act; it being a rule prescribed to the whole body of spiritual persons in the nation ; but an act to enable the bishop of Chester England. to make a leafe to A. B. for 60 years, is an exception. to this rule; it concerns only the parties and the bishop's successors, and is therefore a private act,

Statutes also are either declaratory of the common law, or remedial of fome defects therein. Declaratory, where the old outtom of the kingdom is almost fallen into difuse, or become disputable ; in which case the parliament has thought proper, in perpetuum rei testimonium, and for avoiding all doubts and difficulties, to declare what the common law is and ever bath been. Thus the flatute of treasons, 25 Edw. III. cap. 2. doth not make any new species of treasons; but only, for the benefit of the fubject, declares and enumerates those several kinds of offence which before were treafon at the common law, Remedial flatutes are those which are made to supply such defects, and abridge fuch fuperfluities, in the common law, as arife either from the general imperfection of all human laws, from change of time and circumstances, from the mistakes and unadvifed determinations of unlearned judges, or from any other cause whatsoever. And this being done, either by enlarging the common law where it was too parrow and circumferibed, or by reftraining is where it was too lax and luxuriant, hath occasioned another subordinate division of remedial acts of parliament into enlarging and restraining statutes. To instance again in the case of treason. Clipping the current coin of the kingdom was an offence not fushciently guarded against by the common law; therefore it was thought expedient by flatute & Eliza Southantiaw: 19 that this was an enlarging statute. At common law, alfo, fpiritual corporations might leafe out their effates for any term of years, till prevented by the statute 13 Eliz, before mentioned ; this was therefore a restraining flatute,

the confruction of flatutes are principally these which Confrue follow. Secondly, the rules to be observed with regard to

I. There are three points to be confidered in the construction of all remedial statutes; the old law, the mifchief, and the remedy ; that is, how the common law stood at the making of the act ; what the mischies was, for which the common law did not provide; and

⁽B) The method of citing these acts of parliament is various. Many of the ancient statutes are called after the name of the place where the parliament was held that made them; as the statutes of Merton and Marleberge, of Westminster, Glagester, and Winchester, Others are denominated entirely from their subject ; as the flatutes of Wales and Ireland, the articuli eleri, and the prerogative regis. Some are diftinguished by their initial words, a method of citing very ancient; being used by the Jews, in denominating the books of the pentateuch; by the Christian church, in disinguishing their bymns and divine office; by the Romanitt, in deferibing their papel bulls; and in short by the whole body of ancient civilians and canonists, among whom this method of citation generally prevailed, not only with regard to chapters, but inferrior fections also i in imitation of all which we ftill call fome of the old flatutes by their initial words, as the flatute of Quia emptores, and that of Circumspelle agains. But the most usual method of citing them, ofpecially fince the time of Edward II, is by naming the year of the king's reign in which the flatute was made, together with the chapter or particular act, according to its numeral order; as, 9 Geo. II. c. 4. For all the acts of one feffion of parliament taken together make properly but one flatute; and therefore, when two feffions have been held in one year, we usually mention flat 1, or 3. Thus the bill of rights is cited, as 1 W. & M. ft. 2. c. 2. fignifying that it is the second chapter or act of the second statute or the laws made in the second sessions of parliament held in the first year of king William and queen Mary.

Law of

what remedy the parliament hath provided to cure this mischief. And it is the business of the judges so to construe the act, as to suppress the mischief and advance the remedy. Let us instance again in the same restraining statute of 13 Eliz. c. 10. By the common law, ecclefiaffical corporations might let as long leafes as they thought proper: the mischief was, that they let long and unreasonable leases, to the impoverishment of their fucceffors: the remedy applied by the statute was by making void all leafes by ecclefialtical bodies for longer terms than three lives or 21 years. Now in the construction of this statute it is held, that leafes, tho? for a longer term, if made by a bishop, are not void during the bishop's continuance in his fee; or, if made by a dean and chapter, they are not void during the continuance of the dean; for the act was made for the benefit and protection of the fuccesfor. The mifchief is therefore fufficiently suppressed by vacating them after the determination of the interest of the granters; but the leafes, during their continuance, being not within the mifchief, are not within the re-

2. A statute, which treats of things or persons of an inferior rank, cannot by any general words be extended to those of a superior. So a statute, treating of "deans, prebendaries, parlons, vicars, and others baving spiritual promotion," is held not to extend to bishops, though they have spiritual promotion; deans being the highest persons named, and bishops being of

a still higher order.

3. Penal statutes must be construed strictly. Thus Wno ate to J. Edw. VI. c. 12. having enacted that those benefit of clergy, the judges conceived that this did not extend to him who should steal but one borfe, and therefore procured a new act for that purpose in the following year. And, to come nearer to our own times, by the flatute 14 Geo. II. c. 6 flealing sheep or other cattle, was made felony without benefit of clergy. But these general words, " or other cattle," being looked upon as much too loofe to create a capital offence, the act was held to extend to nothing but mere And therefore, in the next fessions, it was found necessary to make another statute, 15 Geo. II. c. 34. extending the former to bulls, cows, oxen, fteers, bullocks, heifers, calves, and lambs, by name.

4. Statutes against frauds are to be liberally and beneficially expounded. This may feem a contradiction to the last rule; most statutes against frauds being in their confequences penal. But this difference is here to be taken : where the flatute acts upon the offender, and inflicts a penalty, as the pillory or a fine, it is then to be taken firictly; but when the flatute acts upon the offence, by fetting afide the fraudulent transaction. here it is to be construed liberally. Upon this footing the statute of 13 Eliz. c. 5. which voids all gifts of goods, &c. made to defraud creditors and others, was held to extend by the general words to a gift made to defraud the queen of a forfeiture.

5. One part of a flatute must be so construed by another, that the whole may (if possible) stand : ut res. years ; here A shall hold it for his term of three years. Law of and afterwards it shall go to the king. For this inter- England, pretation furnishes matter for every clause of the statute to work and operate upon. But,

6. A faving, totally repugnant to the body of the act, is void. If therefore an act of parliament vefts land in the king and his heirs, faving the right of allpersons whatsoever; or vests the land of A in the king, faving the right of A: in either of these cases the saving is totally repugnant to the body of the statute, and (if good) would render the statute of no effect or operation; and therefore the faving is void, and the

land vefts absolutely in the king.

7. Where the common law and a statute differ, the common law gives place to the flatute; and an old statute gives place to a new one. And this upon the general principle laid down in the last section, that leges posteriores priores contrarias abrogant. But this is to be understood only when the latter statute is couclied in negative terms, or by its matter necessarily. implies a negative. As if a former act fays, that a juror upon fuch a trial shall have twenty pounds a-year, and a new statute comes and fays he shall have twenty merks; here the latter statute, though it does not express, yet necessarily implies, a negative, and virtually repeals the former. For if twenty merks be made qualification fufficient, the former flatute which requires twenty pounds is at an end. But if both the acts be merely affirmative, and the fubitance fuch that both may stand together, here the latter does not repeal the former, but they shall both have a concurrent efficacy. If by a former law an offence he imittable at the quarter fessions, affizes; here the jurisdiction of the sessions is not taken away, but both have a concurrent jurisdiction, and the offender may be profecuted at either : unless the new flatute fubjoins express negative words; as, that the offence shall be indictable at the affizes, and not elfewhere.

8. If a flatute, that repeals another, is itself repealed afterwards, the first statute is hereby revived. without any formal words for that purpose. So when the statutes of 26 and 35 Hen. VIII. declaring the king to be the fupreme head of the church, were repealed by a flatute 1 and 2 Philip and Mary, and this latter flatute was afterwards repealed by an act of 1 Eliz. there needed not any express words of revival in queen Elizabeth's flatute, but thefe acts of king Henry were impliedly and virtually revived.

9. Acts of parliament derogatory from the power of subsequent parliaments bind not. So the flatute 11 Hen. VII. c. 1. which directs, that no person for alfifting a king de facto shall be attainted of treason by act of parliament or otherwife, is held to be good only as to common profecutions for high treason; but will not restrain or clog any parliamentary attainder. Because the legislature, being in truth the fovereign power, is always of equal, always of abfolute authority: it acknowledges no fuperior upon earth, which the prior legislature must have been if its ordinances could bind the present parliament. And upon magis valeat quam pereat. As if land be vested in the the same principle Cicero, in his letters to Atticus, king and his heirs by act of parliament, faving the treats with a proper contempt these restraining clauses, right of A; and A has at that time a lease of it for three which endeavour to tie up the hands of succeeding legislatures. "When you repeal the law itself (faye he), you at the same time repeal the prohibitory clause

which guards against such repeal,"

10. Laftly, acts of parliament that are impossible to be performed are of no validity : and if there arise out of them collaterally any abfurd confequences, manifeltly contradictory to common reason, they are with regard to those collateral confequences void. We law down the rule with these reflrictions : though we know it is generally laid down more largely, that acts of parliament contrary to reason are void. But if the parliament will positively enact a thing to be done which is unreasonable, we know of no power that can control it : and the examples usually alleged in support of this fense of the rule do none of them prove that where the main object of a flatute is unreasonable, the judges are at liberty to reject it; for that were to fet the judicial power above that of the legislature, which would be subversive of all government. But where some collateral matter arises out of the general words, and happens to be unreasonable; there the judges are in decency to conclude that this confequence was not forefeen by the parliament, and therefore they are at liberty to expound the flatute by equity, and only quoad boc difregard it. Thus if an act of parliament gives a man power to try all causes that arise within his manor of Dale; yet, if a cause should arise in which he himself is party, the act is construed not to extend to that, because it is unreasonable that any man should determine his own quarrel. But, if we could conceive it possible for the parliament to enact, that he should try as well his own causes as thore other persons, there is no court that has power to defeat the intent of the legislature, when couched in such evident and exprefs words as leave no doubt whether it was the intent of the legislature or not.

These are the several grounds of the laws of England : over and above which, equity is also frequently called in to affift, to moderate, and to explain them. What equity is, and how impossible in its very effence to be reduced to flated rules, hath been shewn above. It may be fufficient, therefore, to add in this place, that, besides the liberality of sentiment with which our common-law judges interpret acts of parliament, and fuch rules of the unwritten law as are not of a politive kind, there are also courts of equity established for the benefit of the subject, to detect latent frauds and concealments, which the process of the courts of law is not adapted to reach; to enforce the execution of fuch matters of trust and confidence, as are binding in confcience, though not cognizable in a court of law; to deliver from such dangers as are owing to misfortune or overfight; and to give a more specific relief, and more adapted to the circum lances of the cafe, than can always be obtained by the generality of the rules of the positive or common law. This is the business of the courts of equity, which however are only converfant in matters of property. For the freedom of our constitution will not permit, that in criminal cases a power should be lodged in any judge to construe the law otherwise than according to the letter. This caution, while it admirably protects the public liberty, can never bear hard upon individuals. A man cannot fuffer more punishment than the law assigns, but he may

fuffer lefs. The laws cannot be firained by partiality Law of to inflict a penalty beyond what the letter will warrant; Bugland, but, in cases where the letter induces any apparent hardfhip, the crown has the power to pardon.

The objects of the laws of England are, t. The rights of persons. 2. The rights of things. 3. Pri-

vate wrongs. 4. Public wrongs.

CHAP. I.

Of the RIGHTS of PERSONS.

SECT. I. Of the absolute rights of individuals. (1.) THE objects of the Laws of England are, 1. Rights, 2. Wrongs.

(2) Rights are the rights of persons, or the rights

of things.

(3) The rights of persons are such as concern, and are annexed to, the perions of men; and, when the person to whom they are due is regarded, they are called (fimply) rights; but, when we confider the perfon from whom they are due, they are then denomina-

(4.) Persons are either natural, that is, such as they are formed by nature ; or artificial, that is, created by human policy, as bodies politic or corpora-

(5.) The rights of natural persons are, 1. Absolute. or fuch as belong to individuals. 2. Relative, or fuch

(6.) The absolute rights of individuals, regarded by the municipal laws (which pay no attention to duties, of the appointment of the appointme

or civil liberty.

(7.) Political or civil liberty is the natural liberty of mankind, fo far restrained by human laws as is neces-

fary for the good of fociety.

(8.) The absolute rights or civil liberties of Englishmen, as frequently declared in parliament, are principally three; the right of personal security, of personal liberty, and of private property.

(9.) The right of personal security confifts in the legal enjoyment of life, limb, body, health, and repu-

(10) The right of personal liberty confifts in the free power of loco motion, without illegal restraint or

banishment (11.) The right of private property confifts in every man's free wie and disposal of his own lawful acquisi-

tions, without injury or illegal diminution.

(12.) Besides these three primary rights, there are

others which are fecondary and subordinate; viz. (to preferve the former from unlawful attacks). 1. The constitution and power of parliaments; 2. The limitation of the king's prerogative ;- And (to vindicate them when actually violated) 3. The regular admini-firation of public juitice; 4. The right of petitioning for redrefs of grievances; 5. The right of having and uling arms for felf defence.

SECT. II. Of the parliament.

(1.) THE relations of persons are, 1. Public. 2. Pripeople.

32

Law of people. Magistrates are superior or subordinate. And England, of supreme magistrates, in England, the parliament is omied the supreme legislative, the king the supreme executive.

(2.) Parliaments, in some shape, are of as high antiquity as the Saxon government in this island; and have subfifted, in their present form, at least five hundred years.

(3.) The parliament is affembled by the king's writs, and its fitting must not be intermitted above

three years.

(4.) Its constituent parts are the king's majesty, the lords spiritual and temporal, and the commons reprefented by their members; each of which parts has a negative, or necessary, voice in making laws,

(5.) With regard to the general law of parliament; its power is absolute; each house is the judge of its own privileges; and all the members of either house are intitled to the privilege of speech, of person, of their domeffice, and of their lands and goods.

(6.) The poculiar privileges of the lords (befides their judicial capacity), are to hunt in the king's for refts; to be attended by the fages of the law; to make

proxies; to enter proteffs; and to regulate the election of the 16 peers of North-Britain,

(7.) The peculiar privileges of the commons are to frame taxes for the fubject; and to determine the merits of their own elections, with regard to the qualifications of the electors and elected, and the proceedings at elections themselves.

(8.) Bills are usually twice read in each house, committed, engroffed, and then read a third time; and when they have obtained the concurrence of both

houses, and received the royal affent. they have (9.) The houses may adjourn themselves; but the

king only can prorogue the parliament, (10.) Parliaments are diffolyed, 1. At the king's

will. 2. By the demife of the crown, that is, within fix months after, 3. By length of time, or having fat for the space of feven years,

SECT. III. Of the king and his title,

(1.) The supreme executive power of this kingdom is lodged in a fingle person; the king or queen,

(2.) This royal person may be considered with regard to, 1. His title. 2, His royal family, councils. 4. His duties, 5. His prerogative, 6. His

(3.) With regard to his title; the crown of England. by the positive constitution of the kingdom, bath ever been descendible, and so continues,

(4.) The crown is defeendible in a course peculiar to itfelf.

(5.) This course of descent is subject to limitation by parliament.

Trivi.]

(6.) Notwithstanding such limitations, the crown retains its descendible quality, and becomes hereditary in the prince to whom it is limited,

(7.) King Egbert, King Canute, and King William I. have been fuccessively constituted the common

stocks, or ancestors, of this descent.

(8.) At the revolution the convention of effates, or representative body of the nation, declared, that the misconduct of King James II. amounted to an abdication of the government, and that the throne was there-

England, (9.) In confequence of this vacancy, and from a re- epitomifed gard to the ancient line, the convention appointed the

next Protestant heirs of the blood royal of King Charles I, to fill the vacant throne, in the old order of fuccession; with a temporary exception, or preference, to the person of King William III.

(10.) On the impending failure of the Protestant line of King Charles I, (whereby the throne might again have begome vacant) the king and parliament extended the fettlement of the grown to the Protestant line of King James I, viz. to the Princel's Sophia of Hanover, and the heirs of her body, being Protestants; And

the is now the common stock, from whom the heirs of SECT. IV. Of the king's royal family.

(1.) THE king's royal family confifts, first, of the queen; who is regnant, confort, or dowager,

(3.) The queen confort is a public person, and hath many personal prerogatives and distinct revenues,
(3.) The Prince and Princes of Wales, and the

Prince's royal, are peculiarly regarded by the law. (4.) The other princes of the blood-royal are only

intitled to precedence.

the crown must descend.

Secr. V. Of the councils belonging to the king.

(1.) The king's councils are, 1. The parliament, 2. The great council of press 3. The judges, for 2. The great, 4. The privy council.

(3.) In privy-counfellors may be considered, 1. Their ereation, 2. Their qualifications, 3. Their duties. 4. Their powers, 5. Their privileges, 6. Their diffolution.

Secr. VI. Of the king's duties,

(1.) THE king's dutles are to govern his people according to law, to execute judment in mercy, and to maintain the established religion. These are his part of the original contract between himself and the people; founded in the nature of fociety, and expressed in his oath at the coronation.

SECT. VII. Of the king's prerogative.

(1.) PREBOGATIVE is that special power and preeminence which the king hath above other perfons, and out of the ordinary course of law, in right of his regal dignity,

(2.) Such prerogatives are either direct, or incidental. The incidental, ariting out of other matters, are con-fidered as they arife; We now treat only of the direct.

(3.) The direct prerogatives regard, 1. The king's dignity, or royal character; 2, His authority, or regal

power; s. Hie revenue, or royal income.

(4.) The king's dignity confilts in the legal attributes of, r. Perfonal fovereignty.

2. Absolute perfection. of, t. Personal sovereig

(5.) In the king's authority, or regal power, confifts

the executive part of government.

(6.) In foreign concerns; the king, as the representa.

Law of tive of the nation, has the right or preregative, 1. Of .malt-tax, being an annual excise on malt, mum, cycler, England, fending and receiving ambaffadors. 2, Of making treaepitonifed ties. 3. Of proclaiming war or peace. 4. Of iffuing

reprifale, 5. Of granting fafe conducts, (7.) In domestie affairs; the king is, first, a constituent part of the supreme legislative power; hath a negative upon all new laws; and is bound by no sta-

tute, unless specially named therein,

(8.) He is also confidered as the general of the king. dom, and may raife fleets and armies, build forts, appoint havens, erect beacons, prohibit the exportation of arms and ammunition, and confine his fubjects within the realm, or recal them from foreign parts.

(Q.) The king is also the fountain of justice, and general confervator of the peace; and therefore may erect courts (wherein he hath a legal ubiquity), profecute offenders, pardon crimes, and iffue proclamations.

(10.) He is likewise the fountain of honour, of of-

fice, and of privilege.

(11.) He is also the arbiter of domestic commerce : (not of foreign, which is regulated by the law of merchants); and is therefore intitled to the erection of public marts, the regulation of weights and measures, and the coinage or legitimation of money.

(12.) The king is, lastly, the supreme head of the church; and, as fuch, convenes, regulates, and diffolves fynods, nominates bishops, and receives appeals

in all ecclefiaftical caufes.

SECT, VIII. Of the king's revenue.

(1.) THE king's revenue is either ordinary or extraordinary. And the ordinary is, I. Ecclefiaflical, 2. Temporal.

(2.) THE king's ecclefiaftical revenue confifts in, 1. The custody of the temporalties of vacant bishoprics. 2. Corodies and penfions. 3. Extra-parochial tithes. 4. The first fruits and tenths of benefices,

(3.) The king's ordinary temporal revenue confifts in, 1. The demefne lands of the crown. 2. The hereditary excife; being part of the confideration for the purchase of his feodal profits, and the prerogatives of purveyance and pre-emption. 3. An annual fum iffuing from the duty on wine-licences; being the refidue of the same consideration. 4. His forests, 5. His courts of justice. 6. Royal fish. 7. Wrecks, and things jet-fam, stotsam, and ligan. 8. Royal mines. 9. Treafure trove. 10. Waifs. 11. Eftrays. 12. Forfeitures for offences, and deodands. 13. Escheats of lands, 14. Custody of ideots and lunatics.

(4.) The king's extraordinary revenue, confifts in aids, fubfidies, and fupplies, granted him by the com-

mons in parliament.

- (5.) Heretofore these were usually raised by grants of the (nominal) tenth or fifteenth part of the moveables in every township; or by scutages, hydages, and talliages; which were succeeded by subsidies affessed upon individuals, with respect to their lands and
- (6.) A new lystem of taxation took place about the time of the revolution: our modern taxes are therefore, 1. Annual. 2. Perpetual.
- (7.) The annual taxes are, 1. The land-tax, or the ancient fubfidy raifed upon a new affestment. 2. The

and perry. epitamifed.

(8.) The perpetual taxes are, I. The cultoms, or tonnage and poundage of all merchandife exported or imported, 2. The excise-duty, or inland imposition on a great variety of commodities. 3. The falt-duty, or excise on salt. 4. The post office, or duty for the carriage of letters. 5. The flamp-duty on paper, parchment, &c. 6. The duty on houses and windows. 7. The duty on licences for hackney coaches and chairs. 8. The duty on offices and penfions.

(9.) Part of this revenue is applied to pay the interest of the national debt, till the principal is dischar-

ged by parliament.

(10.) The produce of these several taxes were originally separate and specific funds, to answer specific leans upon their respective credits; but are now confolidated by parliament into three principal funds, the aggregate, general, and South-fea funds, to answer all the debts of the nation; the public faith being also fuperadded, to fupply deficiencies, and firengthen the fecurity of the whole,

(11.) The furplusses of these funds, after paying the interest of the national debt, are carried together, and denominated the finking fund: which, unless otherwife appropriated by parliament, is annually to be applied towards paying off some part of the principal.

(12.) But, previous to this, the aggregate fund is now charged with an annual fum for the civil lift; which is the immediate proper revenue of the crown. fettled by parliament on the king at his accession, for defraying the charges of civil government.

SECT. IX. Of Subordinate magistrates.

(1.) SUBORDINATE magistrates, of the most general use and authority, are, 1. Sheriffs. 2. Coroners. 3. Justices of the Peace. 4. Constables. 5. Surveyors of the highways. 6. Overfeers of the poor.
(2.) The sheriff is the keeper of each county, an-

nually nominated in due form by the king; and is (within his county) a judge, a confervator of the peace, a ministerial officer, and the king's bailiff,

(3.) Coroners are permanent officers of the crown in each county, elected by the freeholders; whose office it is to make inquiry concerning the death of the king's fubjects, and certain revenues of the crown; and alfo, in particular cases, to supply the office of sheriff.

(4.) Justices of the peace are magistrates in each county, flatutably qualified, and commissioned by the king's majefly : with authority to conferve the peace ; to hear and determine felonics, and other mildemeanors; and to do many other acts committed to their charge by particular flatutes,

(5.) Constables are officers of hundreds and townfhips, appointed at the leet, and empowered to preferve the peace, to keep watch and ward, and to apprehend offenders.

(6.) Surveyors of the bighways are officers appointed annually in every parish; to remove annoyances in, and to direct the reparation of the public roads.

(7.) Overfeers of the poor are officers appointed annually in every parish; to relieve such impotent, and employ fuch sturdy poor, as are fettled in each parish, -by birth, -by parentage, -by marriage, -or by

Ivii.

40 days residence; accompanied with, 1. Notice. epitomifed. 2. Renting a tenement of ten pounds annual value. 3. Paying their affeffed taxations, 4. Serving an annual office. 5. Hiring and fervice for a year. 6. Apprenticeship for seven years. 7. Having a sufficient estate in the parish.

liii SECT. X. Of the people, whether aliens, denizens, or natives.

> (1.) THE people are either aliens, that is, born out of the dominions, or allegiance, of the crown of Great Britain : or natives, that is, born within it.

(2.) Allegiance is the duty of all fubjects; being the reciprocal tie of the people to the prince, in return for the protection he affords them; and, in natives, this duty of allegiance is natural and perpetual; in aliens, is local and temporary only.

(3.) The rights of natives are also natural and perpetual: those of aliens, local and temporary only; unlefs they be made denizens by the king, or naturalifed

by parliament.

SECT. XI. Of the clergy.

(1.) THE people, whether aliens, denizens, or natives, are also either clergy, that is all persons in holy orders, or in ecclefialtical offices; or laity, which com-

prehends the rest of the nation.

(2) The clerical part of the nation, thus defined, are. I. Archbishops and bishops; who are elected by their feveral chapters, at the nomination of the crown, and afterwards confirmed and confecrated by each other. 2. Deans and chapters. 3. Arch-deacons. 4. Rural deans. 5. Parfons (under which are included appropriators) and vicars; to whom there are generally requisite, holy orders, presentation, institution, and in-duction. 6. Curates. To which may be added, 7. Church-wardens. 8. Parish-clerks and sextons.

SECT. XII. Of the civil flate.

(1.) THE laity are divisible into three states: civil. military, and maritime.

(2.) The civil state (which includes all the nation, except the clergy, the army, and the navy, and many individuals among them also), may be divided into the

nobility and the commonalty.

(3.) The nobility are dukes, marquifes, earls, vifcounts, and barons. These had anciently duties annexed to their respective honours: they are created either by writ, that is, by fummons to parliament; or by the king's letters patent, that is, by royal grant; and they enjoy many privileges exclusive of their fenatorial capacity.

(4.) The commonalty confift of knights of the garter, knights bannerets, baronets, knights of the bath, knights bachelors, efquires, gentlemen, yeomen, tradefmen, artificers, and labourers.

SECT. XIII. Of the military and maritime flates. īvi.

(1.) THE military flate, by the flanding conflitutional law, confifts of the militia of each county, raifed from among the people by lot, officered by the Nº 176.

principal landholders, and commanded by the lord lieu-

(2.) The more disciplined occasional troops of the epitomisei kingdom are kept on foot only from year to year by parliament; and, during that period, are governed by martial law, or arbitrary articles of war, formed at the pleafure of the crown.

(3.) The maritime state consists of the officers and mariners of the British navy; who are governed by exprefs and permanent laws, or the articles of the navy.

established by act of parliament.

W.

SECT. XIV. Of master and servant.

(1.) THE private, economical, relations of persons are those of, 1. Master and servant. 2. Husband and

wife. 3. Parent and child. 4. Guardian and ward.,
(2.) The tirst relation may subsist between a master and four species of fervants; (for flavery is unknown to our laws) : viz. 1. Menial fervants; who are bired. 2. Apprentices; who are bound by indentures. 3. Labourers; who are cafually employed. 4. Stewards, bailiffs, and factors; who are rather in a ministerial state.

(3.) From this relation refult divers powers to the

maiter, and emoluments to the fervant.

(4.) The master hath a property in the service of his fervant; and must be answerable for such acts as the fervant does by his express, or implied, command.

SECT. XV. Of husband and wife.

(1.) THE fecond private relation is that of marriage; which includes the reciprocal rights and duties

of bulband and wife. (2.) Marriage is duly contracted between persons, 1. Confenting: 2. Free from canonical impediments. which make it voidable : 3. Free also from the civil impediments, -of prior marriage, -of want of age, -of non confent of parents or guardians, where requifite, -and of want of reason; either of which make it totally void. And it must be celebrated by a clergyman in due form and place

(3). Marriage is diffolved, 1. By death. 2. By divorce in the spiritual court; not a mensa et thoro only, but a vinculo matrimonii, for canonical cause existing previous to the contract. 3. By act of parliament,

as for adultery. (4.) By marriage the husband and wife become one person in law; which unity is the principal foundation of their respective rights, duties, and disabilities.

SECT. XVI. Of parent and child.

(1.) THE third, and most universal private relation, is that of parent and child.

(2.) Children are, 1. Legitimate; being those who are born in lawful wedlock, or within a competent time after. 2. Baftards, being those who are not fo.

(3.) The duties of parents to legitimate children are, 1. Maintenance. 2. Protection. 3. Education.

(4.) The power of parents confifts principally in correction, and confent to marriage. Both may after death be delegated by will to a guardian; and the for mer alfo, living the parent, to a tutor or master.

(5.) The duties of legitimate children to parents are obedience, protection, and maintenance.

(6.)

epitomifed.

maintenance.

SECT. XVII. Of guardian and ward.

(1.) THE fourth private relation is that of guardian and ward, which is plainly derived from the last; these being, during the continuance of their relation, reciprocally fubject to the fame rights and duties.

(6.) The duty of parents to baflards is only that of

(7.) The rights of a baftard are fuch only as he can acquire; for he is incapable of inheriting any thing.

(2.) Guardians are of divers forts: 1. Guardians by nature, or the parents. 2. Guardians for nurture, affigned by the ecclefiaftical courts. 3. Guardians in focage, affigned by the common law. 4. Guardians by statute, affigned by the father's will. All subject to the fuperintendance of the court of chancery.

(3.) Full age in male or female for all purposes is the age of 21 years (different ages being allowed for different purposes); till which age the person is an in-

īxi.

(4.) An infant, in respect of his tender years, bath various privileges, and various difabilities, in law; chiefly with regard to fuits, crimes, estates, and contracts.

SECT. XVIII. Of corporations.

(1.) Bodies politic, or corporations, which are artificial persons, are established for preserving in perpetual fuccession certain rights; which, being conferred on natural persons only, would fail in process of time.

(2.) Corporations are, 1. Aggregate, confifting of many members. 2. Sole, confifting of one person only.

(3.) Corporations are also either spiritual, erected to perpetuate the rights of the church; or lay. And the lay are, 1. Civil; erected for many temporal purpofes. 2. Eleemofynary; erected to perpetuate the charity of

(4.) Corporations are usually erected and named, by virtue of the king's royal charter; but may be crea-

ted by act of parliament.

(5.) The powers incident to all corporations are, 1. To maintain perpetual fuccession. 2. To act in their corporate capacity like an individual. 3. To hold lands, fubject to the flatutes of mortmain. 4. To have a common feal. 5. To make by-laws. Which last power, in spiritual or eleemosynary corporations, may be executed by the king or the founder.

(6.) The duty of corporations is to answer the ends

of their institution.

(7.) To enforce this duty, all corporations may be vifited: spiritual corporations by the ordinary; lay corporations by the founder, or his representatives; viz. the civil by the king (who is the fundator incipiens of all) reprefented in his court of king's bench; the eleemofynary by the endower (who is the fundator perficiens of fuch), or by his heirs or affigns.

(8.) Corporations may be diffolved, 1. By act of parliament. 2. By the natural death of all their members. 3. By furrender of their franchises. 4. By for-

feiture of their charter.

CHAP. II.

Of the RIGHTS of THINGS.

SECT. I. Of Property in general.

(1.) A LL dominion over external objects has its ori-ginal from the gift of the Creator to man in general.

(2.) The fubstance of things was, at first, common to all mankind; yet a temporary property, in the use of them, might even then be acquired, and continued,

by occupancy. (3.) In process of time a permanent property was established in the substance, as well as the use, of things; which was also originally acquired by occupancy only.

(4.) Left this property should determine by the owner's dereliction or death, whereby the thing would again hecome common, focieties have established conveyances, wills, and heir/hips, in order to continue the property of the first occupant: and, where by accident fuch property becomes discontinued or unknown, the thing usually results to the fovereign of the state, by virtue of the municipal law.

(5.) But of fome things, which are incapable of permanent fubstantial dominion, there still subsists only the fame transient usufructuary property, which originally

fubfifted in all things.

SECT. II. Of real property; and, first, of corporeal hereditaments.

(1.) In this property, or exclusive dominion, confift the rights of things; which are, 1. Things real. 2. Things personal.

(2.) In things real may be considered, 1. Their several kinds. 2. The tenures by which they may be holden. 3. The estates which may be acquired therein. 4. Their title, or the means of acquiring and lo-

fing them. (3.) All the feveral kinds of things real are reducible to one of these three, viz. lands, tenements, or hereditaments; whereof the fecond includes the first, and

the third includes the first and second. (4.) Hereditaments, therefore, or whatever may come to be inherited (being the most comprehensive denomination of things real), are either corporeal or incor-

poreal. (5.) Corporeal hereditaments confift wholly of lands. in their largest legal fense; wherein they include not only the face of the earth, but every other object of fense adjoining thereto, and sublisting either above or beneath it.

SECT. III. Of incorporeal hereditaments.

(1.) INCORPOREAL hereditaments are rights iffuing out of things corporeal, or concerning, or annexed to, or exercifable within the fame.

(2.) Incorporeal hereditaments are, 1. Advowfons. 2. Tithes. 3. Commons. 4. Ways. 5. Offices. 6. Dignities. 7. Franchifes. 8. Corodies or pensions. 9. Anmuities. 10. Rents. 4 K

Vol. IX. Part II.

Part II. England.

(2.) An advowson is a right of presentation to an 4. Privileged villenage, or villein socage; where the fer-England, ecclefiaftical benefice; either appendant, or in grofs. This may be, 1. Prefentative. 2. Collative. 3. Do-

native.

(4.) Tithes are the tenth part of the increase yearly ariting from the profits and flock of lands, and the perfonal industry of mankind. These, by the ancient and politive law of the land, are due of common right to the parson, or (by endowment) to the vicar; unless fpecially discharged, 1. By real composition. 2. By prescription, either de modo decimandi, or de non decimando.

(5.) Common is a profit which a man hath in the lands of another; being, 1. Common of pasture; which is either appendant, appurtenant, because of vicinage, or in gross. 2. Common of piscary. 3. Common of turbary. 4. Common of eftovers, or botes.

(6.) Ways are a right of passing over another man's

ground.

(7.) Offices are the right to exercise a public or private employment.

(8.) For dignities, which are titles of honour, fee

Chap. I. Sect. 12.

- (9.) Franchifes are a royal privilege, or branch of the king's prerogative, fubfilting in the hands of a fub-
- (10.) Corodies are allotments for one's fustenance; which may be converted into pensions, fee Chap. L.

(11.) An annuity is a yearly fum of money, charged upon the person, and not upon the lands of the granter.

(12.) Rents are a certain profit iffuing yearly out of lands and tenements; and are reducible to, 1. Kentfervice. 2. Rent-charge. 3. Rent-feck.

SECT IV. Of the Feodal System.

(1.) THE doctrine of tenures is derived from the feodal law; which was planted in Europe by its northern conquerors at the diffolution of the Roman em-

(2.) Pure and proper feuds were parcels of land allotted by a chief to his followers, to be held on the condition of perfonally rendering due military fervice to

their lord

hyi.

Exvii-

(3.) These were granted by investiture; were held under the bond of fealty; were inheritable only by defcendants; and could not be transferred without the mutual confent of the lord and vaffal.

(4.) Improper feuds were derived from the other; but differed from them in their original, their fervices and renders, their descent, and other circumstances.

(5.) The lands of England were converted into feuds, of the improper kind, foon after the Norman conquest; which gave rife to the grand maxim of tenure, viz. That all lauds in the kingdom are holden, mediately or immediately, of the king.

SECT. V. Of the ancient English Tenures.

(1.) THE diffinction of tenures confifted in the nature of their fervices : as, 1. Chivalry, or knight-fervice : where the fervice was free, but uncertain. 2. Free foeage; where the fervice was free, and certain. 3. Pure willenage; where the fervice was base, and uncertain.

(2.) The most universal ancient tenure was that in epitomised chivalry, or by knight-fervice; in which the tenant of every knight's fee was bound, if called upon, to attend his lord to the wars. This was granted by livery, and perfected by homage and fealty; which usually drew after them fuit of court.

(3.) The other fruits and confequences of the tenure by knight-fervice were, 1. Aid. 2. Relief. 3. Primer feisin. 4. Wardship. 5. Marriage. 6. Fines upon

alienation. 7. Escheat.

W.

vice was bafe, but certain,

(4.) Grand ferjeanty differed from chivalry principally in its render, or fervice; and not in its fruits and consequences.

(5.) The personal service in chivalry was at length gradually changed into pecuniary affeffments, which

were called fcutage or escuage.

(6.) These military tenures (except the services of grand ferjeanty) were, at the restoration of King Charles, totally abolished, and reduced to free focage by act of parliament.

SECT. VI. Of the modern English Tenures.

(1.) FREE focage is a tenure by any free, certain, and determinate fervice.

(2.) This tenure, the relic of Saxon liberty, includes petit serjeanty, tenure in burgage, and gavelkind.

(3.) Free focage lands partake strongly of the feodal nature, as well as those in chivalry: being holden; fubject to some fervice, at the least to fealty and fuit of court; fubject to relief, to wardship, and to efcheat, but not to marriage; fubject also formerly to aids, primer feifin, and fines for alienation.

(4.) Pure villenage was a precarious and flavish tenure, at the absoluce will of the lord, upon uncertain

fervices of the bafest nature.

(5.) From hence, by tacit confent or encroachment. have arisen the modern copyholds, or tenure by copy of court-roll; in which lands may be still held at the (nominal) will of the lord, (but regulated) according to the custom of the manor.

(6.) These are subject, like socage lands, to fervices relief, and escheat; and also to heriots, wardship,

and fines upon defcent and alienation.

(7.) Privileged villenage, or villein focage, is ar exalted species of copyhold tenure, upon base, but certain, fervices; fublifting only in the ancient demefnes of the crown; whence the tenure is denominated the tenure in ancient demesne.

(8.) These copyholds of ancient demesne have divers immunities annexed to their tenure; but are still held by copy of court-roll, according to the custom of the manor, though not at the will of the lord,

(9.) Frankalmoign is a tenure by spiritual services at large, whereby many ecclefiaftical and eleemofynary. corporations now hold their lands and tenements; being of a nature diftinct from tenure by divine fervice in certain.

SECT. VII. Of freehold estates of inheritance.

(1.) ESTATES in lands, tenements, and hereditaments, are fuch interest as the tenant hath therein; to ascertain which, may be considered, 1. The quantity Ixim.

W.

627 England

lxxii

31 The number Law of of interest. 2. The time of enjoyment. England, and connections of the tenants.

(2.) Estates, with respect to their quantity of intereft, or duration, are either freehold, or lefs than free-

(3.) A freehold effate, in lands, is fuch as is created by livery of feifin at common law; or, in tenements of an incorporeal nature, by what is equivalent

(4.) Freehold eftates are either estates of inheritance, or not of inheritance, viz. for life only : and inberitances are, 1. Absolute, or fee simple. 2. Limited

(5.) Tenant in fee simple is he that hath lands, tenements, or hereditaments, to hold to him and his heirs

for ever. (6.) Limited fees are, 1. Qualified, or base, sees.

2. Fees conditional at the common law. (7.) Qualified or base fees are those which, having a qualification fubjoined thereto, are liable to be de-

feated when that qualification is at an end. (8.) Conditional fees, at the common law, were fuch as were granted to the donee, and the heirs of his bo-

dy, in exclusion of collateral heirs,

(9.) These were held to be fees, granted on condition that the donee had iffue of his body; which condition being once performed by the birth of iffue, the donee might immediately aliene the land: but the statute de donis being made to prevent such alteration, thereupon from the division of the fee (by construction of this statute) into a particular estate and a reversion, the conditional fees began to be called fees tail.

(10.) All tenements real, or favouring of the realty,

are subject to entails.

(11.) Estates tail may be, 1. general, or special; 2. male, or female; 3. given in frank marriage.

(12.) Incident to estates tail are, 1. Waste. Dower. 3. Curtefy. 4. Bar ;-by fine, recovery, or

lineal warranty with affets.

(13.) Estates tail are now, by many statutes and refolutions of the courts, almost brought back to the ftate of conditional fees at the common law.

SECT. VIII. Of freeholds, not of inheritance. Exx.

(1.) FREEHOLDS, not of inheritance, or for life only, are, 1. Conventional, or created by the act of the parties. 2. Legal, or created by operation of law. (2.) Conventional effaces for life are created by an

express grant for term of one's own life, or pur auter vie; or by a general grant, without expressing any term at all.

(3,) Incident to this, and all other estates for life, are estovers, and emblements : and to estates per auter vie general occupancy was also incident; as special occupancy still is, if cefluy que vie survives the tenant.

(4.) Legal estates for life are, 1. Tenancy in tail, after poffibility of iffue extinct. 2. Tenancy by the

curtefy of England. 3. Tenancy in dower.

(5.) Tenancy in tail, after possibility of issue extinct, is where an effate is given in special tail; and, before iffue had, a person dies from whose body the iffue was to fpring; whereupon the tenant (if furviving) becomes tenant in tail, after possibility of iffue extinct.

(6.) This estate partakes both of the incidents to an Law of eftate tail, and those of an estate for life.

(7.) Tenancy by the curtefy of England is where a epitomifed. man's wife is feifed of an estate of inheritance; and he by her has iffue, born alive, which was capable of inheriting her estate; in which case he shall, upon her death, hold the tenements for his own life, as tenant by the curtefy.

(8.) Tenancy in doquer is where a woman's husband is feifed of an estate of inheritance, of which her iffue might by any possibility have been heir; and the hufband dies: the woman is thereupon intitled to dower, or one third part of the lands and tenements, to hold for her natural life.

(9.) Dower is either by the common law: by fpecial custom; ad offium ecclefia; or, ex affensu patris.

(10.) Dower may be forfeited or barred, particularly by an estate in jointure.

SECT. IX. Of estates less than freehold.

(1.) ESTATES less than freehold are, 1. Estates for years. 2. Estates at will. 3. Estates at Sufferance.

(2.) An effate for years is where a man, feifed of lands and tenements, letteth them to another for a certain period of time, which transfers the interest of the term; and the leffee enters thereon, which gives him possession of the term, but not legal seisin of the

(3.) Incident to this estate are estovers; and also emblements, if it determines before the full end of the

(4) An estate at will is where lands are let by one man to another, to hold at the will of both parties;

and the leffee enters thereon. (5.) Copyholds are estates held at the will of the lord.

(regulated) according to the custom of the manor. (6.) An estate at sufferance is where one comes into possession of land by lawful title, but keeps it afterwards without any title at all.

SECT. X. Of estates upon condition.

(1.) ESTATES (whether freehold or otherwise) may also be held upon condition; in which case their exiftence depends on the happening, or not happening, of some uncertain event.

(2.) These estates are, 1. On condition implied. 2. On condition expressed. 3. Estates in gage. 4. Estates by flatute, merchant or staple. 5. Estates by

elegit.

(3.) Estates on condition implied are where a grant of an estate has, from its essence and constitution, a condition infeparably annexed to it; though none be expressed in words.

(4.) Eflates on condition expressed are where an express qualification or provision is annexed to the grant

of an estate.

(5.) On the performance of these conditions either expressed or implied (if precedent) the estate may be veited or enlarged; or on the breach of them (if subsequent) an estate already vested may be defeated.

(6.) Estates in gage, in vadio, or in pledge, are estates granted as a fecurity for money lent; being,

Irvei

Law of England, epitomifed

1. In vivo vadio, or living gage; where the profits of land are granted till a debt be paid, upon which payiment the granter's effate will revive. 2. In mortuo vadio, in dead, or mort gage; where an effate is granted, on condition to be void at a day certain, if the granter then repays the money borrowed; on failure of which, the effate becomes abfolutely dead to the granter.

(7.) Estates by flatute-merchant, or flatute-staple, are also estates conveyed to creditors, in pursuance of certain statutes, till their profits shall discharge the

debt.

(8.) Estates by elegit are where, in consequence of a judicial writ so called, lands are delivered by the sheriss to a plaintiss, till their profits shall satisfy a debt adjudged to be due by law.

exiii. Sect. XI. Of estates in possession, remainder, and reversion.

(1.) ESTATES, with respect to their time of enjoyment, are either in immediate possiblinon, or in expediancy; which edates in expediancy are created at the same time, and are parcel of the same estates, as those upon which they are expectant. These are, 1. Remainders. 2. Reversions.

(z.) A remainder is an eftate limited to take effect, and be enjoyed, after another particular eftate is de-

ermined.

(3.) Therefore, 1. There mult be a precedent particular eflate, in order to fupport a remainder. 2. The remainder mult pass out of the granter, at the creation of the particular eflate. 3. The remainder must vest in the grantee, during the continuance, or at the determination, of the particular eslate.

(4.) Remainders are, 1. Vested; where the estate is fixed to remain to a certain person, after the particular estate is spent. 2. Contingent; where the estate is limited to take effect, either to an uncertain person,

or upon an uncertain event

(5.) An executory devife is fuch a difpofition of lands, by will, that an eftate fhall not veit thereby at the death of the devifor, but only upon fome future contingency, and without any precedent particular effate to fupport it.

(6.) A reversion is the refidue of an estate left in the granter, to commence in possession after the determination of some particular estate granted: to which are

incident fealty, and rent.

(7.) Where two elitates, the one lefs, the other greater, the one in possession, the other in expectancy, meet together in one and the same person, and in one and the same right, the less is merged in the greater.

laxiv. SECT. XII. Of estates, in severalty, joint tenancy, coparcenary, and common.

(1.) ESTATES, with respect to the number and connections of their tenants, may be held, 1. In severalty. 2. In joint-tenancy. 3. In coparcenary. 4. In common.

(2.) An eftate in feveralty is where one tenant holds it in his own fole right, without any other person be-

ing joined with him.

(3.) An effate in joint-tenancy is where an effate is Law of granted to two or more persons; in which case the law confirues them to be joint-tenants, unless the words of the grant expressly exclude such confirue-

(4.) Joint-tenants have an unity of interest, of title, of time, and of possession: they are seiled per my of per tout: and therefore upon the deccase of one joint-tenant, the whole interest remains to the survivor.

(5.) Joint tenancy may be diffolved, by destroying

one of its four constituent unities.

(6.) An eflate in coparcenary is where an eflate of inheritance defeends from the anceftor to two or more perfons; who are called parceners, and all together make but one heir.

(7.) Parceners have an unity of interest, title, and possessing is but are only seised per my, and not per tout: wherefore there is no survivorship among parceners.

(8.) Incident to this estate is the law of hotchpot.
(9.) Coparcenary may also be dissolved, by destroy-

ing any of its three constituent unities.

(10.) An effate in common is where two or more perfons hold lands, possibly by diffinet titles, and for diflinct interests; but by unity of possession, because none knoweth his own severalty.

(11.) Tenants in common have therefore an unity of possession, (without survivorship; being seised per my, and not per tout;) but no necessary unity of title.

time, or interest.

(12) This eflate may be created, t. By diffolying the conflituent unities of the two former; 2. By express limitation in a grant: and may be deftroyed, t. By uniting the feveral titles in one tenant; 2. By partition of the land.

SECT. XIII. Of the title to things real, in geneneral.

(1.) A tille to things real is the means whereby a man cometh to the just possession of his property.

(2.) Herein may be confidered, 1. A mere of naked poffeffion. 2. The right of poffeffion; which is, 1/3, an apparent, 2/1/3, an actual right. 3. The mere right of property. 4. The conjunction of actual poffers on with both these rights; which constitutes a perfect title.

SECT. XIV. Of title by descent.

(1.) THE title to things real may be reciprocally acquired or lost, 1. By descent. 2. By purchase.

(2.) Descent is the means whereby a man, on the death of his ancestor, acquires a title to his estate, in

right of representation, as his heir at law.

(3.) To underfland the doctrine of defcents, we must form a clear notion of confanguinity; which is the connection, or relation, of perions defcended from the fame stock or common ancestor; and it is, 1. Lineal, where one of the kinfmen is lineally defcended from the other. 2. Collateral, where they are lineally defcended, not one from the other, but both from the fame common ancestor.

(4.) The rules of descent, or canons, of inheritance,

observed by the laws of England, are these:

ift, Inheritances shall lineally descend to the iffue of

epitomifed

lxxx.

the person last actually seised, in infinitum; but shall never lineally afcend.

2d. The male iffue shall be admitted before the female. 3d, Where there are two or more males in equal degree, the eldest only shall inherit; but the females

all together. 4th, The lineal descendants, in infinitum, of any perfon deceased shall represent their ancestor; that is,

shall stand in the same place as the person himself would have done, had he been living.

5th, On failure of lineal descendants, or issue, of the person last feised, the inheritance shall descend to the blood of the first purchaser; subject to the three pre-ceding rules. To evidence which blood, the two following rules are established.

6th, The collateral heir of the person last seised must be his next collateral kinfman, of the whole blood.

7th, In collateral inheritances, the male flocks shall be preferred to the female; that is, kindred derived from the blood of the male ancestors shall be admitted before those from the blood of the female: unless where the lands have, in fact, descended from a female.

SECT. XV. Of title by purchase, and first by

- (1.) PURCHASE, or perquifition, is the poffession of an estate which a man hath by his own act or agreement; and not by the mere act of law, or descent from any of his angestors. This includes, 1. Escheat. 2. Occupancy. 3. Prescription. 4. Forfeiture. 5. Alienation.
- (2.) Escheat is where, upon deficiency of the tenant's inheritable blood, the estate falls to the lord of the fee.
- (3.) Inheritable blood is wanting to, I. Such as are not related to the person last feifed. 2. His maternal relations in paternal inheritances, and vice verla. 2. His kindred of the half blood. 4. Monters. 5. Bastards. 6. Aliens, and their issue. 7. Persons attainted of treason or felony. 8. Papists, in respect of themselves only, by the statute law.

SECT. XVI. Of title by occupancy.

(1.) Occupancy is the taking possession of those

things which before had no owner.

(2.) Thus, at the common law, where tenant pur auter vie died during the life of ceftuy que vie, he, who could first enter, might lawfully retain the possession; unless by the original grant the heir was made a special occupant.

(3.) The law of dereliations and alluvious has narrowed the title by occupancy.

SECT. XVII. Of title by prescription.

(1) PRESCRIPTION (as distinguished from custom) is a personal imme morial usage of enjoying a right in some incorporeal hereditament, by a man, and either his anceftors or those whose effate of inheritance he hath : of which the first is called preferibing in his ancestors, the latter in a que estate.

SECT. XVIII. Of title by forfeiture.

(1.) FORFEITURE is a punishment annexed by law to fome illegal act, or negligence, in the owner of things real; whereby the estate is transferred to ano-

ther, who is usually the party injured. (2.) Forfeitures are occasioned, 1. By crimes. 2. By alienation, contrary to law. 3. By lapfe. 4. By fimony. 5. By nonperformance of conditions. 6. By walle, 7. By

breach of copyhold customs. 8. By bankruptcy. (3.) Forfeitures for crimes, or missemeanors, are for,
1. Treason. 2. Felony. 3. Misprisson of treason. 4. Pramunire. 5. Affaults on a judge, and batteries,

fitting the courts. 6. Popish recusancy, &c. (4.) Altenations, or conveyances, which induce a forfeiture, are, 1. These in mortmain, made to corporations contrary to the flatute law. 2. Those made

to aliens. 3. Those made by particular tenants, when larger than their estates will warrant. (5.) Laple is a forfeiture of the right of presenta-

tion to a vacant church, by neglect of the patron to

prefent within fix kalendar months. (6.) Simony is the corrupt prefentation of any one to an ecclefiaftical benefice, whereby that turn becomes forfeited to the crown.

(7.) For forfeiture by nonperformance of conditions,

fee Sect. 10.

(8.) Waste is a spoil, or destruction, in any corporeal hereditaments, to the prejudice of him that hath the inheritance.

(9.) Copyhold estates may have also other peculiar causes of forfeiture, according to the cuftom of the manor.

(10.) Bankruptcy is the act of becoming a bankrupt; that is, a trader who fecretes himfelf, or does certain other acts tending to defraud his creditors, (See Sect. 22.)

(11.) By bankruptcy all the effates of the bankrupt are transferred to the affignees of his commissioners, to be fold for the benefit of his creditors.

SECT. XIX. Of title by alienation.

(1.) ALIENATION, conveyance, or purchase in its more limited fenfe, is a means of transferring real estates, wherein they are voluntarily refigure by one man, and accepted by another.

(2.) This formerly could not be done by a tenant, without licence from his lord; nor by a lord, without

attornment of his tenant.

(3.) All persons are capable of purchasing; and all that are in possession of any estates, are capable of conveying them : unless under peculiar disabilities by law; as being attainted, non compotes, infants, under durefs, feme-coverts, aliens, or papifts.

(4.) Alienations are made by common offurances: which are, 1. By deed, or matter in pais. 2. By matter of record. 3. By special custom. 4. By devise.

SECT. XX. Of alienation by deed.

laxvi.

(1.) In affurances by deed may be confidered, 1. Its general nature. 2. Its feveral species. (2.) A deed, in general, is the folemn act of the

Janix.

laxviii.

Ixxxiii

Law of parties; being usually a writing scaled and delivered; ing some condition, upon which the estate may be de-England, and it may be, I. A deed indented, or indenture. 2. A

(3.) The requisites of a deed are, I. Sufficient parties, and proper fubject-matter. 2. A good and fufficient consideration. 3. Writing on paper, or parchment, duly stamped. 4. Legal and orderly parts: (which are usually, ift, the premises; 2dly, the babendum : 3dly, the tenendum; 4thly, the reddendum; 5thly, the conditions; 6thly, the warranty, which is either lineal or collateral; 7thly, the covenants; 8thly, the conclusion, which includes the date). c. Reading it, if defired. 6. Sealing, and, in many cases, figning it also. 7. Delivery. 8. Attestation.

(4.) A deed may be avoided, I. By the want of any of the requifites before mentioned. 2. By fublequent matter; as, 1ft, Rasure, or alteration. 2dly, Defacing its feal. 3dly, Cancelling it. 4thly, Difagreement of those whose consent is necessary. 5thly, Judg-

ment of a court of justice.

(5.) Of the feveral species of deeds, some serve to convey real property, fome only to charge and discharge it. (6.) Deeds which serve to convey real property, or

conveyances, are either by common law, or by flatute. And, of conveyances by common law, some are original or primary, others derivative or fecondary.

(7.) Original conveyances are, 1. Feofinents. 2. Gifts. 3. Grants. 4. Leafes. 5. Exchanges. 6. Partitions. Derivative are, 7. Releases. 8. Confirmations. 9. Sur-

renders. 10. Assignments. 11. Defeazances. (8.) A feoffment is the transfer of any corporeal hereditament to another, perfected by livery of feifin, or delivery of bodily possession from the feosfer to the feoffee; without which no freehold effate therein can

be created at common law.

tail. (10.) A grant is the regular method, by common

law, of conveying incorporeal hereditaments. (11.) A lease is the demise, granting, or letting to farm of any tenement, usually for a less term than the leffor hath therein; yet fometimes possibly for a greater; according to the regulations of the reftraining and

enabling statutes.

interests, the one in consideration of the other. (13.) A partition is the division of an estate held in joint-tenancy, in coparcenary, or in common, between the respective tenants; so that each may hold his diflinct part in feveralty.

(14.) A release is the discharge or conveyance of a man's right, in lands and tenements, to another that hath fome former estate in possession therein.

(15.) A confirmation is the conveyance of an estate or right in effe, whereby a voidable estate is made fure, or a particular estate is increased.

(16.) A surrender is the yielding up of an eftate for life, or years, to him that hath the immediate remainder or reversion; wherein the particular estate may

(17.) An affignment is the transfer, or making over to another, of the whole right one has in any estate; but usually in a lease, for life or years.

(18.) A defeazance is a collateral deed, made at the fame time with the original conveyance; contain-

(19.) Conveyances by flatute depend much on the epitomifed doctrine of uses and trusts: which are a confidence reposed in the terre tenant, or tenant of the land, that he shall permit the profits to be enjoyed, according to the directions of ceftuy que ufe, or ceftuy que truft.

(20.) The ftatute of uses, having transferred all uses into actual poffession, (or, rather, having drawn the possession to the use), has given birth to divers other species of conveyance: 1. A covenant to stand seifed to ufe. 2. A bargain and fale, enrolled. 3. A leafe and release. 4. A deed to lead or declare the use of other more direct conveyances. 5. A revocation of uses; being the execution of a power, referred at the creation of the use, of recalling at a future time the use or estate fo creating. All which owe their present operation principally to the statute of uses.

(21.) Deeds which do not convey, but only charge real property, and discharge it, are, 1. Obligations. 2. Re-

cognizances. 3. Defeazances upon both.

SECT. XXI. Of alienation by matter of record.

(1.) Assurances by matter of record are where the fanction of some court of record is called in, to substantiate and witness the transfer of real property. Thefe are, 1. Private alls of parliament. 2. The king's grants. 3. Fines. 4. Common recoveries.

(2.) Private acts of parliament are a species of asfurances, calculated to give (by the transcendent authority of parliament) fuch reasonable powers or relief as are beyond the reach of the ordinary course of

(3.) The king's grants, contained in charters or (9.) A gift is properly the conveyance of lands in letters patent, are all entered on record, for the dignity of the royal person, and security of the royal re-

> (4.) A fine (fometimes faid to be a feoffment of record) is an amicable composition and agreement of an actual, or fictitious, fuit: whereby the estate in question is acknowledged to be the right of one of the parties.

(5.) The parts of a fine are, 1. The writ of cove-(12.) An exchange is the mutual conveyance of equal nant. 2. The licence to agree. 3. The concord. 4. The note. 5. The foot. To which the statute

hath added, 6. Proclamations.

(6.) Fines are of four kinds : 1. Sur cognizance de droit, come ceo que il ad de son done. 2. Sur cognizance de droit tantum. 3. Sur concessit. 4. Sur done, grant, et render; which is a double fine.

(7.) The force and effect of fines (when levied by fuch as have themselves any interest in the estate) are to affure the lands in question to the cognizee, by barring the respective rights of parties, privies, and

(8.) A common recovery is by an actual, or fictitious, fuit or action for land, brought against the tenant of the freehold; who thereupon vouches another, who undertakes to warrant the tenant's title: but, upon fuch vouchee's making default, the land is recovered by judgment at law against the tenant; who, in return, obtains judgment against the vouchee to recover lands of equal value in recompense.

(9.) The force and effect of a recovery are to affure lands

Law of lands to the recoverer, by barring estates tail, and all England, remainders and reversions expectant thereon; provided spitomifed. the tenant in tail either fuffers, or is vouched in, fuch

> (10.) The uses of a fine or recovery may be directed by, 1. Deeds to lead fuch uses; which are made previous to the levying or fuffering them. 2. Deeds to declare the uses; which are made subsequent.

SECT. XXII. Of alienation by fpecial custom. laxxiv.

> (1) Assurances by special custom are confined to the transfer of copybold estates.

> (2.) This is effected by, 1. Surrender by the tenant into the hands of the lord to the use of another, according to the cuftom of the manor. 2. Presentment, by the tenants or homage, of fuch furrender. 3. Ad-

> mittance of the forrenderee by the lord, according to the uses expressed in such surrender. (2.) Admittance may also be had upon original grants to the tenant from the lord, and upon descents

SECT. XXIII. Of alienation by devise.

to the heir from the ancestor.

(1.) DEVISE is a disposition of lands and tenements, contained in the last will and testament of the owner.

(2.) This was not permitted by the common law, as it flood fince the conquest; but was introduced by the statute law, under Henry VIII. fince made more universal by the statute of tenures under Charles II. with the introduction of additional folen nities by the statute of frauds and perjuries in the same reign.

(3.) The construction of all common affurances should be, I. Agreeable to the intention. 2. To the words of the parties. 3. Made upon the entire deed. 4. Bearing strongest against the contractor. 5. Conformable to law. 6. Rejecting the latter of two totally repugnant clauses in a deed, and the former in a will. 7. Most favourable in case of a devise.

SECT. XXIV. Of things personal.

(1.) THINGS perfonal are comprehended under the general name of chattels; which includes whatever wants either the duration, or the immobility, attending things real.

(2.) In these are to be considered, 1. Their distribution. 2. The property of them. 3. The title to that

(3.) As to the distribution of chattels, they are, 1.

Chattels real. 2. Chattels perfonal.

(4.) Chattels real are such quantities of interest, in things immoveable, as are short of the duration of freeholds; being limited to a time certain, beyond which they cannot fubfift. (See Sect. 7.)

(5.) Chattels perfonal are things moveable; which may be transferred from place to place, together with

the person of the owner.

SECT. XXV. Of property in things personal.

(1.) PROPERTY, in chattels personal, is either in posfession, or in action.

(2.) Property in possession, where a man has the actual enjoyment of the thing, is, I. Absolute. 2. Qualified.

(3.) Absolute property is where a man has fuch an Law of exclusive right in the thing, that it cannot cease to be England, his, without his own act or default.

(4.) Qualified property is fuch as is not, in its nature, permanent; but may fometimes fubfift, and at other times not fublift.

(c.) This may arise, 1. Where the subject is incapable of absolute ownership. 2. From the peculiar cir-

cumstances of the owners. (6.) Property in action, is where a man hath not the actual occupation of the thing; but only a right to it, arifing upon fome contract, and recoverable by an

action at law. (7.) The property of chattels personal is liable to remainders, expectant on effates for life; to joint-te-

nancy; and to tenancy in common.

SECT. XXVI. Of title to things personal by occupancy.

(1.) THE title to things personal may be acquired or lost by, 1. Occupancy. 2. Prerogative. 3. Forfeiture. 4. Custom. 5. Succession. 6. Marriage. 7. Judgement. 8. Gift, or grant. 9. Contrad. 10. Bankruptcy. 11. Testament. 12. Administration.

(2.) Occupancy ftill gives the first occupant a right to those few things which have no legal owner, or which are incapable of permanent ownership. Such as, 1. Goods of alien enemies. 2. Things found. 3. The benefit of the elements. 4. Animals fere natura. 5. Emblements. 6. Things gained by accelfion ; or, 7. By confusion. 8. Literary property.

SECT. XXVII. Of title by prerogative, and forfeiture.

(1.) By prerogative is vested in the crown, or its grantees, the property of the royal revenue, (fee Chap. I. Sect. 8.); and also the property of all game in the kingdom, with the right of purfuing and taking it.

(2.) By forfeiture, for crimes and misdemeanors. the right of goods and chattels may be transferred from one man to another; either in part or totally.

(3.) Total forfeitures of goods arife from conviction of, 1. Treason, and misprision thereof. 2. Felony. 3. Excufable homicide. 4. Outlawry for treason or felony. 5. Flight. 6. Standing mute. 7. Assaults on a judge; and batteries, fitting the courts. 8. Premunire. 9. Pretended prophecies. 10. Owling. 11. Refiding abroad of artificers. 12. Challenges to fight, for debts at play.

SECT. XXVIII. Of title by cuftom.

(1.) By custom, obtaining in particular places, a right may be acquired in chattels: the most usual of which customs are those relating to, I. Heriots. 2. Mortuaries. 3. Heir looms.
(2.) Heriots are either heriot-fervice, which dif-

fers little from a rent; or heriot-custom, which is a customary tribute, of goods and chattels, payable to the lord of the fee on the decease of the owner of lands.

(3.) Mortuaries are a customary gift, due to the minister in many parishes, on the death of his parishioners.

Issaviii.

Ixxxia.

Law of (4.) Heir-looms are fuch personal chattels, as descend England, by special custom to the heir, along with the inheritance of his ancestor.

SECT. XXIX. Of title by fuccession, marriage, and

(1.) By fuccession the right of chattels is vested in corporations aggregate; and likewife in fuch corporations fole as are the heads and representatives of bodies aggregate.

(2.) By marriage the chattels real and personal of the wife are vested in the husband, in the same degree of property, and with the fame powers, as the wife when fole had over them; provided he reduces them to poffession.

(3.) The wife also acquires, by marriage, a property

in her own paraphernalia.

(4.) By judgment, confequent on a fuit at law, a man may in some cases, not only recover, but originally acquire, a right to personal property. As, 1. To penalties recoverable by action popular. 2. To damages, 2. To cofts of fuit.

zcii. SECT. XXX. Of title by gift, grant, and con-

> (1.) A gift, or grant, is a voluntary conveyance of a chattel perfonal in possession, without any consideration or equivalent.

(2.) A contract is an agreement, upon fufficient confideration, to do or not to do a particular thing: and, by fuch contract, any personal property (either in posfession or in action) may be transferred.

(3.) Contracts may either be express or implied;

either executed or executory.

(4.) The confideration of contracts is, 1. A good confideration. 2. A valuable confideration; which is, 1. Do, ut des. 2. Facio, ut facias. 3. Facio, ut des. 4. Do, ut facias.

(5.) The most usual species of personal contracts are, 1. Sale or exchange. 2. Bailment. 3. Hiring or

borrowing. 4. Debt.

(6.) Sale or exchange is a transmutation of property from one man to another, in confideration of some re-

compense in value.

(7.) Bailment is the delivery of goods in trust; upon a contract, express or implied, that the trust shall

be faithfully performed by the bailee.

(8.) Hiring or borrowing is a contract, whereby the possession of chattels is transferred for a particular time, on condition that the identical goods (or fometimes their value) be reftored at the time appointed: together with (in case of biring) a stipend or price for the

(9.) This price, being calculated to answer the hazard as well as inconvenience of lending, gives birth to the doctrine of interest, or usury, upon loans; and, confequently, to the doctrine of bottomry or respondentia,

and infurance.

(10.) Debt is any contract, whereby a certain fum of money becomes due to the creditor. This is, I. A debt of record. 2. A debt upon special contract. 3. A debt upon simple contract; which last includes paper credit, or bills of exchange, and promisfory notes.

SECT. XXXI. Of title by bankruptcy.

(1.) BANKRUPTCY (as defined in Sect. 18.) is the

act of becoming a bankrupt. (2.) Herein may be confidered, s. Who may become a bankrupt. 2. The ads whereby he may become a bankrupt. 3. The proceedings on a commis-fion of bankrupt. 4. How his property is transferred

(3.) Persons of full age, using the trade of merchandize, by buying, and felling, and feeking their livelihood thereby, are liable to become bankrupts; for

debts of a fufficient amount.

(4.) A trader, who endeavours to avoid his creditors, or evade their just demands, by any of the ways specified in the several statutes of bankruptcy, doth

thereby commit an act of bankruptev.

(5.) The proceedings on a commission of bankrupt, fo far as they affect the bankrupt himfelf, are princis pally by, 1. Petition. 2. Commission. 3. Declaration of bankruptcy. 4. Choice of assignees. 5. The bankrupt's furrender. 6. His examination. 7. His discovery. 8. His certificate. 9. His allowance. 10. His indemnity.

(6.) The property of a bankrupt's personal estate is, immediately upon the act of bankruptcy, vetted by construction of law in the assignees: and they, when they have collected, distribute the whole by equal di-

vidends among all the creditors.

SECT. XXXII. Of title by testament, and admini-

(1.) CONCERNING testaments and administrations, confidered jointly, are to be observed, 1. Their original and antiquity. 2. Who may make a testament. 3. Its nature and incidents. 4. What are executors and administrators. 5. Their office and duty.

(2.) Testaments have subsisted in England immemo-

rially; whereby the deceased was at liberty to dispose of his personal estate, referving anciently to his wife and children their reasonable part of his effects.

(3.) The goods of inteflates belonged anciently to the king; who granted them to the prelates to be difposed in pious uses: but, on their abuse of this trust in the times of popery, the legislature compelled them to delegate their power to administrators expressly provided by law.

(4.) All persons may make a testament unless difabled by, I. Want of difcretion. 2. Want of free-will.

3. Criminal conduct.

(5.) Testaments are the legal declaration of a man's intentions, which he wills to be performed after his death. These are, I. Written. 2. Nuncupative.

(6.) An executor is he, to whom a man by his will

commits the execution thereof.

(7.) Administrators are, 1. Durante minore etate of an infant executor or administrator; or durante absentia; or pendente lite. 2. Cum testamento annexo; when no executor is named, or the executor refuses to act. 3. General administrators; in purfuance of the statutes of Edward III. and Henry VIII. 4. Administrators de bonis non; when a former executor or administrator dies without completing his truft.

(8.) The office and duty of executors (and, in many neys; and advocates or counsel, viz. either barristers

epitomifed.

Law of epitomifed.

points, of administrators also), are, 1. To bury the or serjeants at law. deceased. 2. To prove the will, or take out administration. 3. To make an inventory. 4. To collect the goods and chattels. 5. To pay debts; observing the rules of priority. 6. To pay legacies, either general or specific; if they be vested, and not lapsed. 7. To distribute the undevised furplus, according to the statute of distributions.

CHAP. III. OF PRIVATE WRONGS.

SECT. I. Of the redress of private wrongs, by the MCV. mere all of the parties.

> (1.) TN Rongs are the privation of right; and are, 1. Private. 2. Public.

> (2.) Private wrongs, or civil injuries, are an infringement, or privation, of the civil rights of indivi-

> duals, confidered as individuals. (3.) The redress of civil injuries is one principal ob-

ject of the laws of England. (4.) This redress is effected, 1. By the mere all of the parties. 2. By the mere operation of law. 3. By

both together, or fuit in courts. (5.) Redress, by the mere att of the parties, is that which arises, I. From the fole act of the party injured. 2. From the joint act of all the parties.

(6.) Of the first fort are, 1. Defence of one's self, or relations. 2. Recaption of goods. 3. Entry on lands and tenements. 4. Abatement of nulances. 5. Distress; for rent, for suit or service, for amercements, for damage, or for divers statutable penalties; - made of fuch things only as are legally diffrainable ;- and taken and disposed of according to the due course of law. 6. Seifing of heriots, &c.

(7.) Of the second fort are, 1. Accord. 2. Arbi-

SECT. II. Of redress by the mere operation of law. xcvi.

> REDRESS, effected by the mere operation of law, is, 1. In the case of retainer; where a creditor is executor or administrator, and is thereupon allowed to retain his own debt. 2. In the case of remitter; where one, who has a good title to lands, &c. comes into poffeffion by a bad one, and is thereupon remitted to his ancient good title, which protects his ill-acquired pof-

SECT. III. Of courts in general.

(1.) REDRESS, that is effected by the all both of law and of the parties, is by fuit or action in the courts

(2.) Herein may be confidered, 1. The courts themfelves. 2. The cognizance of wrongs or injuries therein. And, of courts, I. Their nature and incidents. 2. Their feveral species.

(3.) A court is a place wherein juffice is judicially administered, by officers delegated by the crown; being a court either of record, or not of record.

and judge: and, with us, there are also usually attor- or those of common law.

SECT. IV. Of the public courts of common law and zevili.

(1.) Cours of juffice, with regard to their feveral species, are, I. Of a public, or general, jurisdiction throughout the realm. 2. Of a private, or special, ju-

(2.) Public courts of justice are, I. The courts of common law and equity. 2. The ecclefiastical courts. 3. The military courts. 4. The maritime courts.

(3.) The general and public courts of common law and equity are, I. The court of piepoudre. 2. The court baron. 3. The hundred court. 4. The county court. 5. The court of common pleas. 6. The court of king's bench. 7. The court of exchequer. 8. The court of chancery. (Which two last are courts of equity as well as law). 9. The courts of exchequerchamber. 10. The house of peers. To which may be added, as auxiliaries, 11. The courts of affize and nisi prius.

SECT. V. Of courts ecclefiastical, military, and maritime.

(1.) Ecclesiastical courts (which were feparated from the temporal by William the Conqueror), or courts Christian, arc, 1. The court of the archdeacon. 2. The court of the bishop's consistory. 3. The court of arches. 4. The court of peculiars. 5. The prerogative court. 6. The court of delegates. 7. The court

(2.) The only permanent military court is that of chivalry; the courts martial, annually established by

act of parliament, being only temporary.

(3.) Maritime courts are, 1. The court of admiralty and vice admiralty. 2. The court of delegates. 3. The lords of the privy council, and others, authorifed by the king's commission, for appeals in prizecauses.

SECT. VI. Of courts of a special jurisdiction.

Courts of a special or private jurisdiction are, 1. The forest courts; including the courts of attachments, regard, swienmote, and justice feat. 2 The court of commissioners of sewers. 3. The court of po-licies of assurance. 4. The court of the marshalea and the palace court. 5. The courts of the principality of Wales. 6. The court of the duchy chamber of Lan-caster. 7. The courts of the counties palatine, and other royal franchifes. 8. The stannery courts. 9. The courts of London, and other corporations:- To which may be referred the courts of requests or courts of conscience; and the modern regulations of certain courts baron and county courts. 10. The courts of the two universities.

SECT. VII. Of the cognifance of private wrongs.

(1.) ALL private wrongs or civil injuries are cogni-(4.) Incident to all courts are a plaintiff, defendant, fable either in the courts ecclefiastical, military, maritime,

4 L (2.)

Revii.

Vol. IX. Part II,

(2.) Injuries cognifable in the ecclefiaftical courts are, England, 1. Pecuniary. 2. Matrimonial. 3. Testamentary.

(3.) Pecuniary injuries, here cognifable, are, I. Subtraction of tithes. For which the remedy is by fuit to compel their payment, or an equivalent; and also their double value. 2. Nonpayment of ecclefiaftical dues. 3. Spoliation. Re-Remedy: by fuit for payment. medy: by fuit for reflitution. 4. Dilapidations. Remedy: by fuit for damages. 5. Non-repair of the church, &c.; and non-payment of church-rates. Remedy: by fuit to compel them.

(4.) Matrimonial injuries are, I. Jacitation of marriage. Remedy: by fuit for perpetual filence. 2. Subtraction of conjugal rights. Remedy: by fuit for restitution. 3. Inability for the marriage state. Remedy: by fuit for divorce. 4. Refufal of decent mainte-

nance to the wife. Remedy: by fuit for alimony. (5.) Testamentary injuries are, I. Disputing the validity of wills. Remedy: by fuit to establish them. 3. Obstructing of administrations. Remedy: by suit for the granting them. 3. Subtraction of legacies. Re-

medy: by fuit for the payment.

(6.) The course of proceedings herein is much conformed to the civil and canon law : but their only compullive process is that of excommunication; which is enforced by the temporal writ of fignificavit, or de excommunicato capiendo.

(7.) Civil injuries, cognifable in the court military, or court of chivalry, are, 1. Injuries in point of honour. Remedy: by fuit for honourable amends. 2. Encroachments in coat-armour, &c. Remedy: by fuit to remove them. The proceedings are in a fummary method.

(8.) Civil injuries cognifable in the courts maritime, are injuries, in their nature of common-law cognifance, but arising wholly upon the sea, and not within the precincts of any county. The proceedings are herein alfo much conformed to the civil law.

(Q.) All other injuries are cognifable only in the courts of common law : of which in the remainder of

this chapter.

(10.) Two of them are, however, commissible by these and other inserior courts; viz. 1. Refusal, or neglett, of justice. Remedies: by writ of procedendo, or mandamus. 2. Encroachment of jurisdiction. Remedy: by writ of prohibition.

6ii SECT. VIII. Of wrongs, and their remedies, respecting the rights of persons.

(1.) In treating of the cognifance of injuries by the courts of common law, may be confidered, 1. The injuries themselves, and their respective remedies. 2. The purfuit of those remedies in the several courts.

(2.) Injuries between subject and subject, cognifable by the courts of common law, are in general remedied by putting the party injured into possession of that right whereof he is unjully deprived.

(3.) This is effected, 1. By delivery of the thing detained to the rightful owner. 2. Where that remedy is either impossible or inadequate, by giving the party injured a fatisfaction in damages.

(4.) The instruments, by which these remedies may be obtained, are fuits or adions; which are defined to

be the legal demand of one's right: and these are, 1. Personal. 2. Real. 3. Mixed.

epitomifed. (5.) Injuries (whereof fome are with, others without, force) are, 1. Injuries to the rights of persons. 2. Injuries to the rights of property. And the former are, 1. Injuries to the absolute. 2. Injuries to the relative,

rights of perfons. (6.) The absolute rights of individuals are, 1. Perfonal security. 2 Personal liberty. 3. Private property :: (See Chap. I. Sect. 1.). To which the injuries must

be correspondent.

(7.) Injuries to personal security are, 1. Against a man's life. 2. Against his limbs. 3. Against his body. 4. Against his health. 5. Against his reputation .-The first must be referred to the next chapter.

(8.) Injuries to the limbs and body, are, I. Threats. 2. Affault. 3. Battery. 4. Wounding. 5. Mayhem. Remedy: by action of trespals, vi et armis; for da-

(9.) Injuries to health, by any unwholesome practices, are remedied by a special action of trespals, on

the cafe : for damages.

(10.) Injuries to reputation are, 1. Slanderous and malicious words. Remedy : by action on the cafe : for damages. 2. Libels. Remedy: the same. 3. Malicious prosecutions. Remedy: by action of conspiracy, or on the case; for damages.

(11.) The fole injury to perfonal liberty is false imprisonment. Remedies: 1. By writ of, 1st, Mainprize; 2dly, Odio et atia; 31ly, Homine replegiando. 4thly, Habeas corpus; to remove the wrong. 2. By action of trespais; to recover damages.

(12.) For injuries to private property, fee the next

fection. (13.) Injuries to relative rights affect, 1. Husbands.

2. Parents. 3. Guardians. 4. Masters.
(14.) Injuries to an husband are, 1. Abduction, or taking away his wife. Remedy: by action of trefpals, de uxore rapta et abducta; to recover possession of his wife, and damages. 2. Criminal conversation with her. Remedy: by action on the case; for damages. 3. Beating her. Remedy: by action on the cafe, per guod con-

fortium amisit; for damages. (15.) The only injury to a parent or guardian is the abduction of their children or wards. Remedy: by action of trespass, de filiis, vel custodiis, raptis vel abductis; to recover possession of them, and damages.

(16.) Injuries to a mafter are, 1. Retaining his fervants. Remedy: by action on the case; for damages. 2. Beating them. Remedy: by action on the case, per quod servitium amisit; for damages.

SECT. IX. Of injuries to personal property.

(1.) INJURIES to the rights of property are either to those of personal or real property

(2.) Personal property is either in possession or in

(3.) Injuries to perfonal property in possession are, 1. By dispossession. 2. By damage, while the owner remains in possession.

(4.) Dispossession may be effected, 1. By an unlawful taking. 2. By an unlawful detaining.

(5.) For the unlawful taking of goods and chattels perfonal,

personal, the remedy is, I, Actual restitution, which ticular estate of freehold is determined, before him in Bingland, (in case of a wrongful distress) is obtained by action of replevin, 3. Satisfaction in damages: 1/1, in case of rescous, by action of rescous, poundbreach, or on the case; adly, in case of other unlawful takings, by action of trefpals or trover.

(6.) For the unlawful detaining of goods lawfully taken, the remedy is also, I. Actual restitution; by action of replevin or detinue. 2. Satisfaction in damages: by action on the case, for trover and conver-

(7.) For damage to perfonal property, while in the owner's possession, the remedy is in damages; by action of trespals vi et armis, in case the act be immediately injurious; or by action of trespass on the case, to redrefs confequential damage.

(8.) Injuries to personal property, in action, arise by breach of contracts, I. Express. 2. Implied.

(9.) Breaches of express contracts are, 1. By nonpayment of debts. Remedy: 1/1, Specific payment; recoverable by action of debt. 2dly, Damages for nonpayment; recoverable by action on the cafe. 2. By nonperformance of covenants. Remedy: by action of covenant, 1/2, to recover damages, in covenants perfonal; 2dly, to compel performance, in covenants real, 3. By nonperformance of promises, or assumpsits. Remedy ; by action on the case ; for damages.

(10.) Implied contracts are fuch as arife, 1. From the nature and conflitution of government. 2. From

reason and the construction of law.

(11.) Breaches of contracts, implied in the nature of government, are by the nonpayment of money which the laws have directed to be paid. Remedy: by action of debt (which, in fuch cases, is frequently a popular, frequently a qui tam, action); to compel the specific payment ;--or, fometimes, by action on the case; for damages.

(12.) Breaches of contracts, implied in reason and construction of law, are by the nonperformance of legal presumptive assumpsits : for which the remedy is in damages; by an action on the case on the implied assumpsits, 1. Of a quantum meruit. 2. Of a quantum valebat 3. Of money expended for another. 4. Of receiving money to another's use. 5. Of an infimul computaffent, on an account flated (the remedy on an account unstated being by action of account). 6. Of performing one's duty, in any employment, with integrity, diligence, and skill. In some of which cases an action of deceit (or on the case, in nature of deceit) will lie.

SECT. X. Of injuries to real property; and, first, of dispossession, or ouster, of the freehold.

(1.) INJURIES affecting real property are, 1. Oufter. 2. Trespass. 3. Nusance. 4. Waste. 5. Subtraction. 6. Difturbance. (2.) Oufler is the amotion of possession; and is,

1. From freeholds 2. From chattels real.

(3.) Ouster from freeholds is effected by, 1. Abate-2. Intrusion. 3. Diffeisin. 4. Discontinuance. 5. Deforcement.

(4.) Abatement is the entry of a stranger, after the

death of the ancestor, before the heir.

remainder or reversion.

epitomifed. (6.) Diffeifin is a wrongful putting out of him that

is seised of the freehold.

(7.) Discontinuance is where tenant in tail, or the husband of tenant in see, makes a larger estate of the land than the law alloweth.

(8.) Deforcement is any other detainer of the freehold from him who hath the property, but who never

had the poffession.

(9.) The universal remedy for all these is restitution or delivery of possession; and, fometimes, damages for the detention. This is effected, 1. By mere entry.

2. By action possessory.

3. By writ of right.

(10.) Mere entry, on lands, by him who hath the apparent right of possession, will (if peaceable) divest the mere possession of a wrongdoer. But forcible entries are remedied by immediate restitution, to be given by

a justice of the peace.

(11.) Where the wrongdoer hath not only mere poffession, but also an apparent right of possession, this may be devested by him who hath the actual right of possession, by means of the possessions of surit of entry or affife.

(12.) A writ of entry is a real action, which difproves the title of the tenant, by showing the unlawful means under which he gained or continues poffession. And it may be brought either against the wrongdoer himself, or in the degrees called the per, the per and

cui, and the poft.

(13.) An affife is a real action, which proves the title of the demandant, by showing his own or his anceftor's poffession. And it may be brought either to remedy abatements; viz the affife of mort d'ancestor. &c. : Or to remedy recent diffeifins; viz. the affife of

novel disseifin.

(14.) Where the wrongdoer hath gained the actual right of possession, he who hath the right of property can only be remedied by a writ of right, or some writ of a fimilar nature. As, 1. Where fuch right of poffession is gained by the discontinuance of tenant in tail. Remedy, for the right of property : by writ of formedon, 2. Where gained by recovery in a possession, had against tenants of particular estates by their own default. Remedy: by writ of quod ei deforceat. 3. Where gained by recovery in a possessory action, had upon the merits. 4. Where gained by the flatute of limitations. Remedy, in both cases: by a mere writ of right, the highest writ in the law.

SECT. XI. Of dispossession, or ouster, of chattels

(1.) OUSTER from chattels real s, 1. From estates by flatute and elegit. 2. From an effate for years. (2) Ouster from estates by flatute or elegit, is ef-

fected by a kind of diffeifin Remedy: reflitution and damages; by affife of novel diffeifin.

(3.) Outter from an citate for years, is effected by a like diffeifin, or ejeament. Remedy : restitution, and damages; 1. By writ of ejedione firma. 2. By writ of quare ejecit infra terminum.

(4.) A writ of ejectione firme, or action of trespass in ejectment, lieth where lands, &c. are let for a term (5.) Intrusion is the entry of a stranger, after a par- of years, and the lessee is ousted or ejected from his 4 L 2

ci2

EYI.

cvii.

gviii.

Law of term; in which case he shall recover possession of his England, term, and damages.

(5.) This is now the usual method of trying titles to land, instead of an action real : viz. By, 1. The claimant's making an actual (or supposed) lease upon the land to the plaintiff. 2. The plaintiff's actual (or supposed) entry thereupon. 3. His actual (or supposed) ouster and ejectment by the defendant. For which injury this action is brought either against the tenant, or (more usually) against some casual or fictitious ejector; in whose stead the tenant may be admitted defendant, on condition that the leafe, entry, and oufter, be confessed, and that nothing else be disputed but the merits of the title claimed by the leffor of the plaintiff.

(6.) A writ of quare ejecit infra terminum is an action of a fimilar nature; only not brought against the wrongdoer or ejector himfelf, but fuch as are in pof-

fession under his title.

SECT. XII. Of trespass.

TRESPASS is an entry upon, and damage done to, another's lands, by one's felf, or one's cattle; without any lawful authority, or cause of justification: which is called a breach of his closs. Remedy: damages; by action of trespals, quare clausum fregit: besides that of distress, damage seasant. But, unless the title to the land came chiefly in question, or the trespass was wilful or malicious, the plaintiff (if the damages be under forty shillings) shall recover no more cofts than damages.

SECT. XIII. Of nufance.

(I.) NUSANCE, or annoyance, is any thing that worketh damage or inconvenience: and it is either a public and common nusance, of which in the next chapter; or, a private nufance, which is any thing done to the hurt or annoyance of, 1. The corporeal; 2. The incorporeal, hereditaments of another.

(2.) The remedies for a private nufance (besides that of abatement) are. 1. Damages; by action on the case; (which also lies for special prejudice by a public nusance). 2. Removal thereof, and damages; by affife of nufance. 3. Like removal, and damages; by writ of Quod permittat prosternere.

SECT. XIV. Of wafte.

(1.) WASTE is a spoil and destruction in lands and tenements, to the injury of him who hath, 1. An immediate interest (as, by right of common) in the lands. 2. The remainder or reversion of the inheritance.

(2.) The remedies, for a commoner, are reflitution, and damages; by affife of common: Or, damages on-

ly; by action on the case.

(3.) The remedy, for him in remainder, or reverfion, is, 1. Preventive: by writ of estrepement at law, or injunction out of chancery; to ftay waste. 2. Corrective: by action of waste; to recover the place wafted, and damages.

SECT. XV. Of Subtraction.

(1.) SUBTRACTION is when one, who owes fervices

to another, withdraws or neglects to perform them. Law of This may be, 1. Of rents, and other fervices, due by England, epitomifed, tenure. 2. Of those due by custom.

(2.) For fubtraction of rents and fervices, due by tenure, the remedy is, 1. By diffress; to compel the payment or performance. 2. By action of debt. 3. By affife. 4. By writ de confuetudinibus et fervitiis : -to compel the payment, 5. By writ of cellapit :and, 6. By writ of right fur disclaimer ;-to recover the land itself.

(3.) To remedy the oppression of the lord, the law has also given, I. The writ of Ne injuste vexes : 2. The

writ of melne.

nage.

(4.) For fubtraction of fervices, due by cultom, the remedy is. I. By writ of Seca ad molendinum, furnum, torrale, &c. to compel the performance, and recover damages. 2. By action on the case; for damages

SECT. XVI. Of disturbance.

(1.) DISTURBANCE is the hindering, or disquieting, the owners of an incorporeal hereditament, in their regular and lawful enjoyment of it

(2.) Disturbances are, 1. Of franchises. 2. Of com-3. Of ways. 4. Of tenure. 5. Of patro-

(3.) Disturbance of franchifes, is remedied by a spe-

- cial action on the case; for damages. (4.) Disturbance of common, is, I. Intercommoning without right. Remedy: Damages; by an action on the case, or of trespass: besides diltress, damage seafant ; to compel fatisfaction. 2. Surcharging the common. Remedies: distress, damage feasant; to compel fatisfaction: Action on the case; for damages: or, Writ of admeasurement of pasture; to apportion the common; and writ de secunda superoneratione; for the fupernumerary cattle, and damages. 3. Inclosure, or obstruction. Remedies: Restitution of the common, and damages; by affife of novel diffeifin, and by writ of quod permittat: or, Damages only; by action on the cafe.
- (5.) Diffurbance of ways, is the obstruction, 1. Of a way in gross, by the owner of the land. 2. Of a way appendant, by a stranger. Remedy, for both: damages; by action on the cafe.

(6.) Disturbance of tenure, by driving away tenants, is remedied by a special action on the case; for

(7.) Disturbance of patronage, is the hindrance of a patron to prefent his clerk to a benefice; whereof usurpation, within fix months, is now become a fpe-

(8.) Disturbers may be, 1. The pseudo-patron, by his wrongful prefentation. 2. His clerk, by demanding inflitution. 3. The ordinary, by refusing the clerk

of the true patron.

(9.) The remedies are, 1. By affife of darrein prefentment; 2. By writ of quare impedit; - to compel institution and recover damages: Confequent to which are the writs of quare incumbravit, and quare non admissit; for subsequent damages. 3. By writ of right of advowson; to compel institution, or establish the permanent right.

wix.

Law of SECT. XVII. Of injuries proceeding from, or af-England, feeling, the crown. lepitomifed.

(1.) INJURIES to which the crown is a party are, cxi.

I. Where the crown is the aggressor. 2. Where the crown is the fufferer. (2.) The crown is the aggressor, whenever it is in

possession of any property to which the subject hath a

(3.) This is remedied, 1. By petition of right , where the right is grounded on facts disclosed in the petition itself .. 2. By monstrans de droit : where the claim is grounded on facts, already appearing on record. The effect of both which is to remove the hands (or poffef-

fion) of the king.

(4.) Where the crown is the fufferer, the king's remedies are, 1. By fuch common law actions as are confiftent with the royal dignity. 2. By inquest of office, to recover possession: which, when found, gives the king his right by folemn matter of record; but may afterwards be traversed by the subject. 3. By writ of fcire faciar, to repeal the king's patent or grant. 4. By information of intrufion, to give damages for any trespass on the lands of the crown; or of debt, to recover moneys due upon contract, or forfeited by the breach of any penal flatute; or fometimes (in the latter case) by information in rem : all filed in the exchequer ex officio by the king's attorney-general. 5. By writ of quo warranto, or information in the nature of fuch writ; to feife into the king's hands any franchife usurped by the subject, or to oust an usurper from any public office. 6. By writ of mandamus, unless cause; to admit or reftore any person intitled to a franchise or office : to which if a falle cause be returned, the remedy is by traverse, or by action on the case for damages; and, in confequence, a peremptory mandamus, or writ of restitution.

SECT. XVIII. Of the pursuit of remedies by action; and, first, of the original writ.

(1.) THE pursuit of the feveral remedies furnished by the laws of England, is, 1. By action in the courts of common law. 2 By proceedings in the courts of equity.

(2.) Of an adion in the court of common pleas (originally the proper court for profecuting civil fuits) the orderly parts are, 1. The original writ. 2. The process. 3. The pleadings. 4. The issue, or demurrer, 5. The trial. 6. The judgment. 7. The proceedings in nature of appeal. 8. The execution.

exiii.

(3.) The original writ is the beginning or foundation of a fuit, and is either optional (called a precipe), commanding the defendant to do fomething in certain, or otherwise show cause to the contrary; or peremptory called a fi fecerit te fecurum), commanding, upon fecurity given by the plaintiff, the defendant to appear in court, to show wherefore he hath injured the plaintiff: both iffuing out of chancery under the king's great feal, and returnable in bank during term-time.

SECT. XIX. Of process.

(1.) PROCESS is the means of compelling the defendant to appear in court.

(2.) This includes, 7. Summons. 2. The writ of Law of attachment, or pone; which is fometimes the first or England, original process. 3. The writ of distringas, or distress epitomised. infinite. 4. The writs of capias ad respondendum, and testatum capias ; or, instead of these, in the king's bench, the bill of Middlefex, and writ of latitat : - and, in the exchequer, the writ of quo minus. 5. The alias and pluries writs. 6. The exigent, or writ of exigi facias, proclamations, and outlawry. 7. Appearance, and common bail. 8. The arreft. 9. Special bail, first to the theriff, and then to the action

SECT. XX. Of pleadings.

crist.

PLEADINGS are the mutual altercations of the plaintiff and defendant in writing; under which are comprifed, 1. The declaration or count : (wherein, incidentally, of the vifne, nonfuit, retraxit, and discontinuance). 2. The defence, claim of cognizance, imparlance, view, over, aid-prayer, voucher, or age: 3. The plea; which is either a dilatory plea (1/2, to the jurifdiction; 2dly, in difability of the plaintiff; adly, in abatement), or it is a plea to the action : fometimes confessing the action either in whole or in part : (wherein of a tender, paying money into court, and fet off): but usually denying the complaint, by pleading either, 1st, the general iffue; or, 2dly, a special bar (wherein of justifications, the statutes of limitation, &c.). 4. Replication, rejoinder, furrejoinder, rebutter, furrebutter, &c. Therein of estoppels, colour, duplicity, departure, new affignment, protestation, averment, and other incidents of pleading.

SECT. XXI. Of issue and demurrer.

CXV.

(1.) Issue is where the parties, in a course of pleading, come to a point affirmed on one fide and denied on the other; which, if it be a matter of law, is called a demurrer; if it be a matter of fact, still retains the name of an iffue, of fact.

(2.) Continuance is the detaining of the parties in court from time to time, by giving them a day certain to appear upon. And, if any new matter arises fince the last continuance or adjournment, the defendant may take advantage of it, even after demurrer or iffuc, by alleging it in a plea puis darrein continuance.

(3.) The determination of an iffue in law, or demurrer, is by the opinion of the judges of the court ;

which is afterwards entered on record.

SECT. XXII. Of the feveral species of trial.

(1.) TRIAL is the examination of the matter of fact put in iffue.

(2.) The species of trials are, I. By the record. 2. By inspection. 3. By certificate. 4. By witnesses, 5. By wager of battel. 6. By wager of law. 7. By jury. (3.) Trial by the record is had, when the existence

of fuch record is the point in iffue.

(4.) Trial by inspection or examination is had by the court, principally when the matter in iffue is the evident object of the fenfes.

(5.) Trial by certificate is liad in those cases, where fuch certificate must have been conclusive to a jury.

exvii.

erviii.

wix.

CKYL

Law of (6.) Trial by witneffes (the regular method in the England, civil law) is only ufed on a writ of dower, when the epitomifed death of the hufband is in iffue.

(7.) Trial by wager of battel, in civil cases, is only had on a writ of right; but, in lieu thereof, the tenant may have, at his option, the trial by the grand affile.

(8.) Trial by wager of law is only had, where the matter in iffue may be supposed to have been privily transacted between the parties themselves, without the intervention of other witnesses.

SECT. XXIII. Of the trial by jury.

(1.) Trial by jury is, 1. Extraordinary; as, by the grand affize, in writs of right; and by the grand jury, in writs of attaint. 2. Ordinary.

(2.) The method and process of the ordinary trial by jury is, 1. The writ of venire facias to the fheriff, coroners, or elifors; with the fubfequent compultive process of habeas corpora, or diffringas. 2. The carrying down of the record to the court of nift prius. 3. The sheriff's return ; or panel of, 1st, special, 2dly, common jurors. 4. The challenges; ift, to the array; 2dly, to the polls of the jurors; either, propter honoris respectum, propter desectum, propter affectum (which is femetimes a principal challenge, fometimes to the favour), or propter deliaum. 5. The tales de circumstantibus. 6. The oath of the jury. 7. The evidence; which is either by proofs, 1st, written; 2dly, parole :- or, by the private knowledge of the jurors. 6. The verdict; which may be, 1st, privy; 2dly, public; 3dly, special.

SECT. XXIV. Of judgment, and its incidents

(1.) WHATEVER is transacted at the trial, in the court of nift prius, is added to the record under the name of a piftea: consequent upon which is the judgement.

(a.) Judgment may be arrefled or flayed for causes, I. Extrinsic, or debors the record; as in the case of new trials. 2. Intrinsic, or within it; as where the declaration varies from the writ, or the verdict from the picatings, and iffue; or where the case, laid in the declaration, is not sufficient to support the action in point of law.

(3.) Where the iffue is immaterial, or insufficient,

the court may award a repleader.

(4.) Judgment is the fentence of the law, pronounced by the court, upon the matter contained in the re-

(5.) Judgments are, 1. Interlocutory; which are incomplete till perfected by a writ of inquiry. 2. Final. (6.) Cofts, or expences of uit, are now the necessary confequence of obtaining judgment.

Sect. XXV. Of proceeding, in the nature of appeals.

(t.) PROCEEDINGS, in the nature of appeals from judgment, are, 1. A writ of attaint; to impeach the verdict of a jury; which of late has been superfeded by new trials. 2. A writ of audita querela; to difcharge a judgment by matter that has since happened.

3. A writ of error, from one court of record to another; to correct judgments, erroneous in point of law, and not helped by the statutes of amendment and jeo-fails.

(2.) Writs of error lie, 1. To the court of king's bench, from all inferior courts of record; from the court of common-pleas at Weffminfler; and from the court of king's kench in Ireland. 2. To the courts of exchequer-chamber, from the law fide of the court of exchequer; and from proceedings in the court of king's bench by bill. 3. To the house of peers, from proceedings in the court of king's bench by original, and on writs of error; and from the feveral courts of exchequer-chamber; and from the feveral courts of exchequer-chamber;

SECT. XXVI. Of execution.

Execution is the putting in force of the fenence or judgment of the law. Which is effected, I. Where possession of the law. Which is effected, by writ of babere facias selfinam, possession, escapellar of the law. Which as well the good of the deep case, by a special writ for that purpose: as, by writ of abatement, in case of nulance; retorne babende, and capitas in withernam, in replevin; distringua and serve size in detinue. 3. Where money only is recovered; by writ of, it, capita as fluistfaciendam, against the body of the defendant; or, in default thereof, serve facias against his ball. 2dly. Feir facias, against his goods and the profit of his lands. 4thly, Elegit, against his goods, and the possession of his lands. 4thly, Estentification, and other process, on statutes, recognizances, &c. against his dowly, lands, and goods.

Sect. XXVII. Of proceedings in the courts of exel

(1.) MAYTERS of equity which belong to the pecculiary jurification of the court of chancery, are, 1. The guardianflip of infants. 2. The cultody of ideots and lunatics. 3. The fuperintendance of charities. 4. Commifions of bankrupt.

(2.) The court of exchequer and the duchy court of Lancaster, have also some peculiar causes, in which the interest of the king is more immediately concerned.

(3.) Equity is the true fenfe and found interpretation of the rules of law; and, as fuch, is equally attended to by the judges of the courts both of common

law and equity.

(4.) The effential differences, whereby the English courts of equity are ditinguished from the courts of law, are, 1. The mode of proof, by a discovery on the oath of the party; which gives a jurification in matters of account, and fraud. 2. The mode of riai; by depositions taken in any part of the world. 3. The mode of relief; by giving a more specine and extensive remedy than can be had in the courts of law; as, by carrying agreements into execution, flaying washe or other injuries by injunction, directing the sale of incumbered lands, &c. 4. The true construction of fractifies for money, by considering them merely as a pledge. 5. The execution of trulys, or second uses, in a manner analogous to the law of legal effaces.

W.

L (5.) The proceedings in the court of chancery (to which those in the exchequer. &c. very nearly conform) pitomifed are, I. Bill. 2. Writ of fubpana; and, perhaps, injunction. 3. Process of contempt; viz. (ordinarily) attachment, attachment with proclamations, commif fion of rebellion, ferjeant at arms, and fequestrations. 4. Appearance. 5. Demurrer. 6. Plea. 7. Answer. 8. Exceptions; amendments; crofs, or supplemental, bills; bills of revivor, interpleader, &c. 9. Replication. 10. Iffue. 11. Depolitions, taken upon interrogatories; and subsequent publication thereof. 12. Hearing. 13. Interlocutory decree; feigned iffue, and trial; reference to the mafter, and report; &c.

CHAP. IV.

14. Final decree. 15. Rehearing, or bill of review.

16. Appeal to parliament.

Of PUBLIC WRONGS. SECT. I. Of the nature of crimes, and their punishment.

(1.) IN treating of public wrongs may be confidered, 1. The general nature of crimes and punishments. 2. The persons capable of committing crimes. 3. Their feveral degrees of guilt. 4. The feveral fecies of crimes, and their respective punishments. The means of prevention. 6. The method of punish-

(2.) A crime, or misdemeanor, is an act committed, or omitted, in violation of a public law either forbidding or commanding it.

(3.) Crimes are diftinguished from civil injuries, in that they are a breach and violation of the public rights, due to the whole community, confidered as a community.

(4.) Punishments may be confidered with regard to, 1. The power; 2. The end; 3. The measure :- of their infliction.

(5.) The power, or right, of inflicting human punishments for natural crimes, or such as are mala in fe, was by the law of nature vested in every individual; but, by the fundamental contract of fociety, is now transferred to the fovereign power; in which also is vefted, by the fame contract, the right of punishing positive offences, or such as are mala prohibita.

(6., The end of human punishments is to prevent future offences; I. By amending the offender himfelf. 2. By deterring others through his example. 3. By depriving him of the power to do future mischief.

(7.) The measure of human punishments must be determined by the wifdom of the fovereign power, and not by any uniform universal rule: though that wifdom may be regulated, and affifted, by certain general, equitable, principles.

SECT. II. Of the persons capable of committing

exxiv.

(1.) ALL persons are capable of committing crimes, unless there be in them a defect of will: for, to conflitute a legal crime, there must be both a vitious will, and a vitious act.

(2.) The will does not concur with the act, 1. Where ligious impossures. Penalty: fine, imprisonment, and

there is a defect of understanding. 2. Where no will Law of is exerted, 3. Where the act is constrained by force England, and violence

(3.) A vitious will may therefore be wanting, in the cases of, 1. Infancy 2. Idiocy, or Junacy. 3. Drunkenness; which doth not, however, excuse. 4. Misfortune. 5. Ignorance, or mi take of fact. 6. Compulsion, or necessity; which is, 1st, that of civil subjection; 2dly, that of duress per minas; 3dly, that of choosing the least pernicious of two evils, where one is unavoidable; 4thly, that of want, or hunger; which is no legitimate excuse.

(4.) The king, from his excellence and dignity, is

also incapable of doing wrong.

SECT. III. Of principals and accessories.

(1.) THE different degrees of guilt in criminals are, 1. As principals. 2. As accessories.

(2.) A principal in a crime is, I. He who commits the fact. 2. He who is prefent at, aiding, and abet-

ting, the commission.

3.) An accessory is he who doth not commit the fact, nor is prefent at the commission : but is in some fort concerned therein, either before or after.

(4.) Accessories can only be in petit treason, and felony: in high treason, and misdemeanors, all are prin-

(5.) An acceffory, before the fact. is one who, being absent when the crime is committed, hath procured, counfelled, or commanded, another to commit

(6.) An acceffory after the fact, is where a person, knowing a felony to have been committed, receives, relieves, comforts, or affifts, the felon. Such acceffory is usually intitled to the benefit of clergy; where the principal, and acceffory before the fact, are excluded from it.

SECT. IV. Of offences against GoD and religion.

(1.) CRIMES and misdemeanors cognizable by the laws of England are fuch as more immediately offend, 1. God, and his holy religion. 2. The law of nations. 3. The king, and his government. 4. The public, or commonwealth. 5. Individuals.

(2.) Crimes more immediately offending Gop and religion are, 1. Apostacy For which the penalty is incapacity, and imprisonment. 2. Herefy. Penalty, for one species thereof: the same. 3. Offences against the established church :- Either, by reviling its ordinances. Penalties: fine; deprivation; imprisonment; forfeiture .- Or, by nonconformity to its worship: 1st, Thro' total irreligion. Penalty : fine. 2dly, Thro' protestant diffenting. Penalty: suspended by the toleration act. 3dly, Through popery, either in professors of the popish religion, popish recusants, convict, or popish priests. Penalties: incapacity; double taxes: imprisonment; fines; forfeitures; abjuration of the realm; judgment of felony, without clergy; and Judgment of high treason. 4. Blasphemy. Penalty: fine, imprisonment, and corporal punishment. 5. Profane swearing and cursing. Penalty : fine, or house of correction. 6. Witchcraft; or, at least, the pretence thereto. Penalty: imprisonment, and pillory. 7. ReCXXE

exxix.

corporal punishment. 8. Simony. Penalties : forfeientermised, ture of double value; incapacity. 9. Sabbath-breaking. Penalty : fine. 10. Drunkennefs. Penalty : fine, or flocks. 11. Lewdnefs. Penalties: fine; imprisonment ; house of correction.

cxxvii. SECT. V. Of offences against the law of nations.

> (1.) The law of nations is a system of rules, deducible by natural reason, and established by universal confent, to regulate the intercourse between independent flates

> (2.) In England, the law of nations is adopted in its full extent, as part of the law of the land.

> (3.) Offences against this law are principally incident to whole flates or nations; but, when committed by private subjects, are then the objects of the municipal law.

> (4.) Crimes against the law of nations, animadverted on by the laws of England, are, 1. Violation of fafeconducts. 2. Infringement of the rights of embaffadors. Penalty, in both : arbitrary. 3. Piracy. Penalty : judgment of felony, without clergy.

exxviii.

SECT. VI. Of high treason.

(1.) CRIMES and misdemeanors more peculiarly offending the king and his government are, 1. High treason. 2. Felonies injurious to the prerogative. 3. Pramunire. 4. Other misprissions and contempts.

(2.) High treason may, according to the statute of Edward III. be committed, 1. By compassing or imagining the death of the king, or queen-confort, or their eldeft fon and heir; demonstrated by some overt act. 2. By violating the king's companion, his eldeft daughter, or the wife of his eldest son. 3. By some overt act of levying war against the king in his realm. 4. By adherence to the king's enemies. 5. By counterfeiting the king's great or privy feal. 6. By counterfeiting the king's money, or importing counterfeit money. 7. By killing the chancellor, treasurer, or king's justices, in the execution of their offices.

(3.) High treasons, created by subsequent statutes, are such as relate, 1. To papists: as, the repeated defence of the pope's jurifdiction; the coming from beyond fea of a natural-born popish priest; the renouncing of allegiance, and reconciliation to the pope or other foreign power. 2. To the coinage, or other fignatures of the king : as, counterfeiting (or, importing and uttering counterfeit) foreign coin, here curreut; forging the fign manual, privy fignet, or privy feal ; falfifying, &c. the current coin. 3. To the protestant succession: as, corresponding with, or remitting to, the late Pretender's fons; endeavouring to impede the fuccession; writing or printing, in defence of any Pretender's title, or in derogation of the act of fettlement, or of the power of parliament to limit the descent of the crown.

(4.) The punishment of high treason, in males, is (generally) to be, 1. Drawn. 2. Hanged. 3. Emboweiled alive. 4. Beheaded. 5. Quartered. 6. The head and quarters to be at the king's disposal. But, in treafons relating to the coin, only to be drawn, and hanged till dead. Females, in both cases, are to be drawn, and burned alive.

Nº 176.

SECT. VII. Of felonies injurious to the king's prerogative.

(1.) FELONY is that offence which occasions the total forfeiture of lands or goods at common law; now usually also punishable with death, by hanging; unless through the benefit of clergy.

(2.) Felonies injurious to the king's prerogative (of which fome are within, others without, clergy) are, 1. Such as relate to the coin: as, the wilful uttering of counterfeit money, &c.; (to which head some inferior misdemeanors affecting the coinage may be also referred). 2. Conspiring or attempting to kill a privy counsellor. 3. Serving foreign states, or enlisting foldiers for foreign fervice. 4. Embezzling the king's armour or flores. 5. Defertion from the king's armies, by land or fea.

SECT. VIII. Of pramunire.

(1.) PREMUNIRE, in its original fense, is the offence of adhering to the temporal power of the Pope, in derogation of the regal authority. Penalty : outlawry, forfeiture, and imprisonment : which hath fince been extended to some offences of a different nature.

(2.) Among these are, 1. Importing Popish trinkets. 2. Contributing to the maintenance of Popish seminaries abroad, or Popish priests in England. 3. Molesting the possessors of abbey-lands. 4. Acting as broker in an usurious contract, for more than ten per cent. 5. Obtaining any flay of proceedings in fuits for monopolies. 6. Obtaining an exclusive patent for gunpowder or arms. '7. Exertion of purveyance or pre-emption. 8. Afferting a legislative authority in both or either house of parliament. 9. Sending any subject a prisoner beyond sea. 10. Refusing the oaths of allegiance and supremacy. 11. Preaching, teaching, or advised speaking, in defence of the right of any pretender to the crown, or in derogation of the power of parliament to limit the fuccession. 12. Treating of other matters by the affembly of peers of Scotland, convened for electing their representatives in parliament. 15. Unwarrantable undertakings by unlawful fubscriptions to public funds.

Sea. IX. Of misprisions and contempts affecting the king and government.

(1.) MISPRISIONS and contempts are all fuch high offences as are under the degree of capital.

(2.) These are, I. Negative, in concealing what ought to be revealed. 2. Positive, in committing what ought not to be done.

(3.) Negative misprisions are, 1. Misprision of treafon. Penalty: forfeiture and imprisonment. 2. Misprision of felony. Penalty: fine and imprisonment. 3. Concealment of treasure trove. Penalty: fine and imprisonment.

(4.) Politive misprisions or high misdemeanors and contempts, are, I. Mal-administration of public trufts, which includes the crime of peculation. Usual penalties : banishment ; fines ; imprisonment ; disability. 2. Contempts against the king's prerogative. Penalty: fine, and imprisonment. 3. Contempt against his exxx.

CXXXYI -

2. Excufable. (3.) Homicide is, 1. Justifiable.

spitomifed. 3. (4.) Homicide is justifiable, 1. By necessity, and command of law. 2. By permission of law; 1/1, for the furtherance of public justice; 2dly, for prevention of fome forcible felony.

(5.) Homicide is excufable. 1. Per infortunium, or by mif-adventure. 3. Se defendendo, or in felf-defence, by chance-medley. Penalty, in both: forfeiture of goods; which however is pardoned of courfe.

(6.) Felonious homicide is the killing of a human creature without justification or excuse. This is, 1. Kil-

ling one's felf. 2. Killing another.

7.) Killing one's felf, or felf murder, is where one deliberately, or by any unlawful malicious act, puts an end to his own life. This is felony; punished by ignominious burial, and forfeiture of goods and chattels.

(8.) Killing another is, 1. Manslaughter. 2. Murder. (9.) Manflaughter is the unlawful killing of another, without malice, express or implied. This is either, 1. Voluntary, upon a fudden heat. 2. Involuntary, in the commission of some unlawful act. Both are felony, but within clergy; except in the cafe of flabbing.

(10.) Murder is when a person, of sound memory and diferetion, unlawfully killeth any reasonable creature, in being, and under the king's peace; with malice aforethought, either express or implied. This is felony, without clergy; punished with speedy death. and hanging in chains, or diffection.

(11.) Petit treason (being an aggravated degree of murder) is where the fervant kills his mafter, the wife her husband, or the ecclesiastic his fuperior. Penalty: in men, to be drawn and hanged; in women, to be

drawn and burned.

viduals.

CRIMES affecting the persons of individuals, by other corporal injuries not amounting to homicide, are, 1. Maybem; and also shooting at another. Penalties: fine; imprisonment; judgment of felony, without clergy. 2. Forcible abdustion, and marriage or defilement, of an heirefs; which is felony: also, flealing, and deflowering or marrying any woman-child under the age of fixteen years; for which the penalty is imprisonment, fine, and temporary forfeiture of her lands. - 3. Rape, and also carnal knowledge, of a woman child under the age of ten years. 4. Buggery, with man or beaft. Both these are felonies, without clergy .- 5. Affault. 6. Battery; especially of clergymen. 7. Wounding. Penalties, in all three: fine; imprisonment; and other corporal punishment. 8. False imprisonment. Penalties : fine ; imprisonment ; and (in some atrocious cases) the pains of pramunire, and incapacity of office or pardon o. Kidnapping, or forcibly flealing away the king's fubjects. Penalty: fine; imprisonment; and pillory.

MINIVILL SECT. XVI. Of offences against the habitations of

(1.) CRIMES, affecting the habitations of individuals are, 1. Arfon. 2. Burglary.

(2.) Arfon is the malicious and wilful burning of Law of the house, or out house, of another man. This is fe- England epitomised. lony; in fome cases within, in others without, cler-

(3.) Burglary is the breaking and entering, by night, into a mansion-house; with intent to commit a felony. This is felony, without clergy.

SECT. XVII. Of offences against private property. cxxxix.

(1.) CRIMES affecting the private property of individuals are, I. Larciny. 2. Malicious mischief. Forgery.

(2.) Larciny is, 1. Simple. 2. Mixed, or compound.

(3.) Simple larciny is the felonious taking, and carrying away, of the personal goods of another. And it is, 1. Grand larginy; being above the value of twelve pence. Which is felony; in some cases within, in others without, clergy. 2. Petit larciny; to the value of twelve pence or under. Which is also felony, but not capital; being punished with whipping, or transportation.

(4.) Mixed, or compound, larciny is that wherein the taking is accompanied with the aggravation of be-

ing, 1. From the house. 2. From the person. (5.) Larcinies from the boufe, by day or night, are felonies without clergy, when they are, I. Larcinies, above twelve pence, from a church; or by breaking a tent or booth in a market or fair, by day or night, the owner or his family being therein ;- or by breaking a dwelling-house by day, any person being therein ;-or from a dwelling-house by day, without breaking, any perfon therein being put in fear ;-or from a dwellinghouse by night, without breaking, the owner, or his SECT. XV. Of offences against the persons of indi- family being therein and put in fear. 2. Larcinies, of five fbillings, by breaking the dwelling-house, shop, or warehouse by day, though no person be therein :or, by privately stealing in any shop, warehouse, coachhouse, or flable, by day or night, without breaking, and though no person be therein. 3. Larcinies, of forty shillings, from a dwelling-house or its out-houses,

> (6.) Larciny from the person is, 1. By privately fealing, from the person of another, above the value of twelve pence. 2. By robbery; or the felonious and forcible taking, from the person of another, in or near the highway, goods or money of any value, by put-ting him in fear. These are both felonies without clery. An attempt to rob is also felony.

without breaking, and though no perfon be therein.

(7.) Malicious mischief, by destroying dikes, goods, cattle, ships, garments, fish-ponds, trees, woods, churches, chapels, meeting-houses, houses, out houses, corn, hay, ftraw, fea or river banks, hop-binds, coalmines (or engines thereunto belonging), or any fences for inclosures by act of parliament, is felony; and, in most cases, without benefit of clergy

(8.) Forgery is the fraudulent making or alteration of a writing, in prejudice of another's right. Penalties: fine; imprifonment; pillory; lofs of nofe and ears; forfeiture; judgment of felony, without cler-

Law of England epitomifed. exl.

SECT. XVIII. Of the means of preventing offences.

(1.) CRIMES and misdemeanors may be prevented, by compelling suspected persons to give security : which is effected by binding them in a conditional recognizance to the king, taken in court, or by a magi-

(2.) These recognizances may be conditioned, 1. To keep the peace. 2. To be of good behaviour.

(3.) They may be taken by any justice or confervator of the peace, at his own discretion; or, at the

request of fuch as are intitled to demand the same. (4.) All persons, who have given sufficient cause to apprehend an intended breach of the peace, may be bound over to keep the peace; and all those, that be not of good fame, may be bound to the good behaviour ; and may, upon refusal in either case, be committed to gaol.

dili. SECT. XIX. Of courts of criminal jurisdiction.

> (1.) In the method of punishment may be considered, 1. The feveral courts of criminal jurisdiction. 2.

> The feveral proceedings therein. (2.) The criminal courts are, 1. Those of a public and general jurisdiction throughout the realm. 2. Those

of a private and special jurisdiction.

(3.) Public criminal courts are, 1. The high court of parliament; which proceeds by impeachment. 2. The court of the lord high steward; and the court of the king in full parliament : for the trial of capitally indicted peers. 3. The court of king's bench. 4. The court of chivalry. 5. The court of admiralty, under the king's commission. 6. I'he courts of oyer and terminer, and general gaol-delivery. 7. The court of quarter-fessions of the peace. 8. The sheriff's tourn. Q. The court left. 10. The court of the coroner. 11. The court of the clerk of the market.

(4.) Private criminal courts are, 1. The court of the lord steward, &cc. by statute of Henry VII. 2. The court of the lord iteward, &c. by flatute of Hen-

ry VIII. 3. The university courts.

exlii. SECT. XX. Of Summary convictions.

(I.) PROCEEDINGS in criminal courts are, I. Sum-

mary. 2. Regular.

(2.) Summary proceedings are fuch, whereby a man may be convicted of divers offences, without any formal process or jury, at the discretion of the judge or judges appointed by act of parliament, or common

(3.) Such are, 1. Trials of offences and frauds against the laws of excise and other branches of the king's revenue. 2. Convictions before juffices of the peace upon a variety of minute offences, chiefly against the public police. 3. Attachments for contempts to

SECT. XXI. Of arrests.

(1.) REGULAR proceedings in the courts of com- for other groß and notorious misdemeanors. All dif-

mon law, are, 1. Arreft. 2. Commitment and bail. Law of 3. Profecution. 4. Process. 5. Arraignment, and England its incidents. 6. Plea and iffue. 7. Trial and conviction. 8. Clergy. 9. Judgment, and its consequences. 10. Reverfal of judgment. 11. Reprieve or pardon. 12. Execution.

(2.) An arrest is the apprehending, or restraining, of one's person; in order to be forthcoming to answer

a crime whereof one is accused or suspected. (3.) This may be done, 1. By warrant. 2. By an

officer, without warrant. 3. By a private person, without warrant. 4. By hue and cry.

> SECT. XXII. Of commitment and bail. gali,

(1.) COMMITMENT is the confinement of one's perfon in prison, for safe custody, by warrant from proper authority; unless, in bailable offences, he puts in fufficient bail, or fecurity for his future appearance.

(2.) The magistrate is bound to take reasonable bail, if offered; unless the offender be not bailable.

(3.) Such are, 1. Persons accused of treason; or, 2. Of murder; or, 3. Of manslaughter, by indictment; or if the prisoner was clearly the flaver. 4. Prifon-breakers, when committed for felony. 5. Outlaws. 6. Those who have abjured the realm. 7. Approvers, and appellees. 8. Perfons taken with the mainour. o. Perfons accufed of arfon. 10. Excommunicated persons.

(4.) The magistrate may, at his discretion, admit to bail, or otherwise, persons not of good fame, charged with other felonies, whether as principals or as ac-

(5.) If they be of good fame, he is bound to admit

them to bail. (6.) The court of king's bench, or its judges in time of vacation, may bail in any cafe what soever.

SECT. XXIII. Of the several modes of profecution.

(1.) PROSECUTION, or the manner of accusing offenders, is either by a previous finding of a grand jury; as, 1. By presentment. 2. By indiament. Or, without such finding. 3. By information. 4. By

2. A presentment is the notice taken by a grand jury of any offence, from their own knowledge or ob-

fervation.

(3.) An indictment is a written accusation of one or more persons of a crime or misdemeanor, preferred to, and prefented on oath by, a grand jury; expreffing, with fufficient certainty, the person, time, place, and

(4). An information is, v. At the fuit of the king and a subject, upon penal statutes. 4. At the suit of the king only. Either, 1. Filed by the attorney general ex officio, for fuch misdemeanors as affect the king's person or government : or, 2. Filed by the mafler of the crown-office (with leave of the court of king's bench) at the relation of some private subject,

(5) An appeal is an accusation or suit, brought by one private subject against another, for larciny, rape, mayhem, arfon, or homicide; which the king cannot discharge or pardon, but the party alone can re-

SECT. XXIV. Of process upon an indistment. exlvi.

(1.) PROCESS to bring in an offender, when indicted in his absence, is, in misdemeanors, by venire facias, diffres infinite, and capias: in capital crimes, by capias only: and, in both, by outlawry.

(2.) During this stage of proceedings, the indictment may be removed into the court of king's bench from any inferior jurisdiction, by writ of certiorari facias: and cognizance must be claimed in places of ex-

clusive jurisdiction.

exlvii.

Aklviii.

jexlix.

SECT. XXV. Of arraignment, and its incidents.

(1.) ARRAIGNMENT is the calling of the prisoner to the bar of the court, to answer the matter of the indictment.

(2.) Incident hereunto are, 1. The standing mute of the prisoner; for which, in petit treason, and felonies of death, he shall undergo the peine fort & dure. 2. His confession; which is either simple, or by way of approvement.

SECT. XXVI. Of plea, and iffue.

(1.) THE plea, or defensive matter alleged by the prisoner, may be, I. A plea to the jurisdiction. 2. A demurrer in point of law. 3. A plea in abatement. 4. A special plea in bar; which is, rft, Auterfoits acquit; 2dly, Auterfoits convict; 3dly, Auterfoits attaint; 4thly, A pardon. 5. The general iffue, not guilty. (2.) Hereupon iffue is joined by the clerk of the arraigns, on behalf of the king.

SECT. XXVII. Of trial, and conviction.

(1.) TRIALS of offences, by the laws of England, were and are, I. By ordeal, of either fire or water. 2. By the corfned. Both these have been long abolished. 3. By battel, in appeals and improvements. 4. By the peers of Great Britain. 5. By jury.
(2.) The method and process of trial by jury is,

The impannelling of the jury. 2. Challenges; 1ft, for cause ; 2dly, peremptory. 3. Tales de circumflantibus. 4. The oath of the jury. 5. The evidence.

6. The verdict, either general or special.
(3.) Convidion is when the prisoner pleads, or is

found guilty: whereupon, in felonies, the profecutor is intitled to, I. His expences. 2. Restitution of his goods.

SECT. XXVIII. Of the benefit of clergy.

(I.) CLERGY, or the benefit thereof, was originally derived from the usurped jurisdiction of the Popish

(2.) It is an exemption of the clergy from any other epitomifed. fecular punishment for felony, than imprisonment for a year, at the court's discretion; and it is extended likewife, absolutely, to lay peers, for the first offence; and to all lay commoners, for the first offence also, upon condition of branding, impriforment, or transportation.

(3.) All felonies are intitled to the benefit of clergy, except fuch as are now outled by particular fta-

(4.) Felons, on receiving the benefit of clergy. (though they forfeit their goods to the crown), are discharged of all clergyable felonies before committed. and reflored in all capacities and credits.

SECT. XXIX. Of judgment, and its consequences.

(I.) JUDGMENT (unless any matter be offered in arrest thereof) follows upon conviction; being the pronouncing of that punishment which is expressly ordained by law.

(2.) Attainder of a criminal is the immediate confequence, 1. Of having judgment of death pronounced upon him. 2. Of outlawry for a capital offence.

(3.) The confequences of attainder are, 1. Forfeis ture to the king. 2. Corruption of blood.

(4.) Forfeiture to the king, is, I. Of real effates. upon attainder; -in high treason, absolutely, till the death of the late Pretender's fons; in felonies, for the king's year, day, and waste; - in misprisson of treason, affaults on a judge, or battery fitting the courts; during the life of the offender. 2. Of personal estates, upon conviction; in all treason, misprisson of treason, felony, excufable homicide, petit larceny, standing mute upon arraignment, the above-named contempts of the king's courts, and flight.

(5.) Corruption of blood is an utter extinction of all inheritable quality therein: fo that, after the king's forfeiture is first fatisfied, the criminal's lands escheat to the lord of the fee; and he can never afterwards inherit, be inherited, or have any inheritance derived through him.

SECT. XXX. Of reverfal of judgment.

(1.) JUDGMENTS, and their confequences, may be avoided, I. By falfifying, or reverfing, the attainder. 2. By reprieve, or pardon.

(2.) Attainders may be falfified, or reverfed. 1. Without a writ of error; for matter debors the record. 2. By writ of error; for millakes in the judgment, or record.

3. By act of parliament; for favour.

(3.) When an outlarary is reverfed, the party is reftored to the same plight as if he had appeared upon the capias. When a judgment, on conviction, is reverfed, the party flands as if never accused.

SECT. XXXI. Of reprieve, and pardon.

(1.) A REPRIEVE is a temporary fuspension of the judgment, 1. Ex arbitrio judicis. 2. Ex necessitate legis ; for pregnancy, infanity, or the trial of identity of perfon, which must always be tried instanter.

clin

(2.) A pardon is a permanent avoider of the judg-Law of ment by the king's majefty, in offences against his crown and dignity; drawn in due form of law, allowed in open court, and thereby making the offender a new

> (3.) The king cannot pardon, I. Imprisonment of the subject beyond the seas. 2. Offences prosecuted by appeal: 3. Common nuifances. 4. Offences against popular or penal statutes, after information brought by a subject. Nor is his pardon pleadable to an impeachment by the commons in parliament.

SECT. XXXII. Of execution.

(1.) EXECUTION is the completion of human punishment, and must be strictly performed in the manner which the law directs.

(2.) The warrant for execution is fometimes under the hand and feal of the judge; fometimes by writ from the king; fometimes by rule of court; but commonly by the judge's figning the calendar of prisoners, with their feparate judgments in the margin.

PART III. THE LAW OF SCOTLAND.

GENERAL OBSERVATIONS.

HE municipal law of Scotland, as of most other countries, confifts partly of flatutory or written law, which has the express authority of the legislative power; partly of customary or unwritten law, which derives force from its prefumed or tacit confent.

2. Under our statutory or written law is comprehended, (1.) Our acts of parliament : not only those which were made in the reign of James I. of Scotland, and from thence down to our union with England in 1707, but fuch of the British statutes enacted fince the union as concerned this part of the united

kingdom.

3. The remains of our ancient written law were pu-Wajestatem blished by Sir John Skene clerk register, in the beginning of the last century, by licence of parliament. The books of Regiam Majestatem, to which the whole collection owes its title, feem to be a fystem of Scots law, written by a private lawyer at the command of David I.; and though no express confirmation of that treatife by the legislature appears, yet it is admitted to have been the ancient law of our kingdom by express statutes. The borough laws, which were also enacted by the same King David, and the statutes of William, Alexander II. David II. and the three Roberts, are universally allowed to be genuine. Our parliaments have once and again appointed commissions to revise and amend the Regiam Majestatem, and the other ancient books of our law, and to make their report: but, as no report appears to have been made, nor confequently any ratification by parliament, none of these remains are received, as of proper authority, in our courts; yet they are of excellent use in proving and illustrating our most ancient customs.

4. Our written law comprehends, (2.) The acts of federunt, which are ordinances for regulating the forms of proceeding before the court of fession in the administration of justice, made by the judges, who have a delegated power from the legislature for that purpose. Some of these acts dip upon matter of right, which declare what the judges apprehend to be the law of Scotland, and what they are to observe afterwards as a rule

of judgment.

5. The civil, or Roman and canon laws, though f the civil they are not perhaps to be deemed proper parts of our nd cauon written law, have undoubtedly had the greatest influence in Scotland. The powers exercifed by our fovereigns and judges have been justified upon no other ground, than that they were conformable to the civil

or canon laws; and a special statute was judged necesfary, upon the reformation, to refeind fuch of their conflitutions as were repugnant to the Protestant doctrine. From that period, the canon law has been little respected, except in questions of tithes, patronages, and some few more articles of ecclesiastical right: but the Roman continues to have great authority in all cases where it is not derogated from by statute or cuflom, and where the genius of our law fuffers us to apply it.

6. Our unwritten or customary law, is that which, Customary without being expressly enacted by statute, derives its or common force from the tacit confent of king and people; which law. confent is prefumed from the ancient cultom of the community. Custom, as it is equally founded in the will of the lawgiver with written law, has therefore the fame effects: hence, as one flatute may be explained or repealed by another, fo a flatute may be explained by the uniform practice of the community, and even go into difuse by a posterior contrary custom. But this power of custom to derogate from prior statutes is generally confined by lawyers to flatutes concerning private right, and does not extend to those which regard public policy.

7. An uniform tract of the judgments or decisions Decisions be of the court of fession is commonly considered as part the sessionof our customary law; and without doubt, where a particular cultom is thereby fixed or proved, fuch cuftom of itself constitutes law: but decisions, though they bind the parties litigating, have not, in their own nature, the authority of law in fimilar cases; yet, where they continue uniform, great weight is justly laid on

them. Neither can the judgments of the house of peers Judgments of Great Britain reach farther than to the parties in the of the houfer appeal, fince in these the peers act as judges, not as of peers.

lawgivers.

8. Though the laws of nature are fufficiently pub. Promulgalished by the internal suggestion of natural light, civil tion of lawer laws cannot be confidered as a rule for the conduct of life, till they are notified to those whose conduct they are to regulate. The Scots acts of parliament were, by our most ancient custom, proclaimed in all the different thires, boroughs, and baron-courts, of the kingdom, But after our statutes came to be printed, that custom was gradually neglected; and at last, the publication of our laws, at the market-cross of Edinburgh, was declared fufficient; and they became obligatory 40 days thereafter. British statutes are deemed sufficiently notified, without formal promulgation; either because the printing is truly a publication; or because

clv. Municipal

statutory Acts of par iament.

Regiam

erunt.

Strict.

Law of every subject is, by a maxim of the English law, party Scotland, to them, as being prefent in parliament, either by himfelf or his representative. After a law is published, no pretence of ignorance can excuse the breach of it.

9. As laws are given for the rule of our conduct, they can regulate future cases only; for past actions, being out of our power, can admit of no rule. Declaratory laws form no exception to this; for a statute, where it is declaratory of a former law, does no more than interpret its meaning; and it is included in the notion of interpretation, that it must draw back to the

date of the law interpreted.

10. By the rules of interpreting statute-law received Interpreta- in Scotland, an argument may be used from the title to the act itself, a rubro ad nigrum; at least, where the rubric has been either originally framed, or afterwards adopted by the legislature. The preamble or narrative, which recites the inconveniences that had arisen from the former law; and the causes inducing the enactment, may also lead a judge to the general meaning of the flatute. But the chief weight is to be laid

on the flatutory words.

11. Laws, being directed to the unlearned as well as the learned, ought to be construed in their most obvious meaning, and not explained away by fubtle distinctions; and no law is to fuffer a figurative interpretation, where the proper fenfe of the words is as commodious, and equally fitted to the fubject of the ftatute. Laws ought to be explained fo as to exclude abfurdities, and in the fenfe which appears most agreeable to former laws, to the intention of the lawgiver, and to the general frame and ftructure of the conflitution. In prohibitory laws, where the right of acting is taken from a person, solely for the private advantage of another, the confent of him, in whose behalf the law was made, shall support the act done in breach of it; but the confent of parties immediately interested has no effect in matters which regard the public utility of a state. Where the words of a statute are capable but of one meaning, the flatute must be observed, however hard it may bear on particular persons. Nevertheless, as no human fystem of laws can comprehend all poffible cases, more may sometimes be meant by the lawgiver than is expressed; and hence certain statutes, where extension is not plainly excluded, may be extended beyond the letter, to fimilar and omitted cases : others are to be confined to the flatutory words.

12. A strict interpretation is to be applied, (1.) To correctory statutes, which repeal or restrict former laws; and to flatutes which enact heavy penalties, or rettrain the natural liberties of mankind. (2.) Laws, made on occasion of present exigencies in a state, ought not to be drawn to fimilar cases, after the pressure is over. (3.) Where statutes establish certain solemnities as requifite to deeds, fuch folemnities are not suppliable by equivalents; for folemnities lofe their nature, when they are not performed specifically. (4.) A statute, which enumerates special cases, is, with difficulty, to be extended to cases not expressed; but, where a law does not defeend to particulars, there is greater region to extend it to fimilar cases. (5.) Statutes, which carry a dispensation or privilege to particular persons or societies, fuffer a strict interpretation; because they derogate from the general law, and imply a burden upon the rest of the community. But at no rate can a pri-

vilege be explained to the prejudice of those in whose Lawor behalf it was granted. As the only foundation of cn. Scotland stomary law is usage, which confists in fact, such law

can go no farther than the particular usage has gone. 13. All statutes, concerning matters specially fa- Ample. voured by law, receive an ample interpretation; as laws for the encouragement of commerce, or of any ufeful public undertaking, for making effectual the wills of dying persons, for restraining fraud, for the security of creditors, &c. A flatute, though its subject-matter should not be a favourite of the law, may be extended to fimilar cases, which did not exist when the statute was made; and for which, therefore, it was not in the

lawgiver's power to provide.

W.

14. Every flatute, however unfavourable, must receive the interpretation necessary to give it effect : and. on the other hand, in the extension of favourable laws, fcope must not be given to the imagination, in discovering remote refemblances; the extension must be limited to the cases immediately fimilar. Where there is ground to conclude that the legislature has omitted a case out of the statute purposely, the statute cannot be extended to that case, let it be ever so similar to the cases expressed.

15. The objects of the laws of Scotland, according to Mr Erskine, one of the latest writers on the subject.

are, Persons, Things, and Actions.

CHAP. I. Of PERSONS.

Mong perfons, judges, who are invested with ju-A rifdiction, deferve the first consideration.

SECT. I. Of jurisdiction and judges in general.

JURISDICTION is a power conferred upon a judge or Jurisdiction magistrate, to take cognisance of and decide causes according to law, and to carry his fentences into execution. That tract of ground, or district, within which a judge has the right of jurifdiction, is called his territory: and every act of jurifdiction exercised by a

judge without his territory, either by pronouncing fentence, or carrying it into execution, is null. 2. The supreme power, which has the right of en-King the acting laws, falls naturally to have the right of erec jurisdiction ting courts, and appointing judges, who may apply thefe laws to particular cafes: but, in Scotland, this

right has been always intrufted with the crown, as having the executive power of the state.

3. Jurisdiction is either supreme, inferior, or mixed. Distinc-That jurifdiction is supreme, from which there lies no tions of peappeal to a higher court. Inferior courts are those ifdiction. whose sentences are subject to the review of the supreme courts, and whose jurifdiction is confined to a particular territory. Mixed jurifdiction participates of the nature both of the supreme and inferior: thus the judge of the high court of admiralty, and the commiffar es of Edinburgh, have an universal jurifdiction over Scotland, and they can review the decrees of inferior admirals and commissaries; but fince their own decrees are fubject to the review of the courts of fession or jufliciary, they are, in that respect, inferior courts.

4. Jurisdiction is either civil or criminal : by the first, questions of private right are decided; by the other, crimes are punished. But, in all jurisdiction, though

clus

iction,

ounded

tetters of

punish either corporally, or by a pecuniary fine, those who offend during the proceedings of the court, or who shall afterwards obstruct the execution of the sen-

5. Jurisdiction is either privative or cumulative. Privative jurisdiction, is that which belongs only to one court, to the exclusion of all others. Cumulative, otherwise called concurrent, is that which may be exercifed by any one of two or more courts, in the same cause. In civil cumulative jurisdiction, the private purfuer has the right of election before which of the courts he shall fue; but as, in criminal questions which are profecuted by a public officer of court, a collision of jurisdiction might happen, through each of the judges claiming the exercise of their right, that judge, by whose warrant the delinquent is first cited or apprebended (which is the first step of jurisdiction), acquires thereby (jure praventionis) the exclusive right of judging in the caufe.

6. All rights of jurifdiction, being originally grant. ed in confideration of the fitness of the grantee, were therefore perfonal, and died with himfelf. But, upon the introduction of the feudal fystem, certain jurisdictions were annexed to lands, and descended to heirs, as well as the lands to which they were annexed; but now all heritable jurisdictions, except those of admiralty and a small pittance reserved to barons, are either abolish-

ed, or refumed and annexed to the crown.

7. Jurisdiction is either proper or delegated. Proper jurifdiction, is that which belongs to a judge or magistrate himself, in virtue of his office. Delegated, is that which is communicated by the judge to another who acts in his name, called a depute or deputy. Where a deputy appoints one under him, he is called a fublitute. No grant of jurisdiction, which is an office requiring personal qualifications, can be delegated by the grantee to another, without an express power in the grant.

Civil jurif-8. Civil jurisdiction is founded, 1. Ratione domicilii, if the defender has his domicile within the judge's territory. A domicile is the dwelling place where a perfon lives with an intention to remain; and custom has fixed it as a rule, that refidence for 40 days founds it risdiction. If one has no fixed dwelling place, e. g. a foldier, or a travelling merchant, a personal citation against him within the territory is sufficient to found the judge's jurisdiction over him, even in civil que-Rions. As the defender is not obliged to appear before a court to which he is not subject, the pursuer must follow the defender's domicile.

9. It is foundee, 2. Ratione rei sita, if the subject in question lie within the territory. If that subject be immoveable, the judge, whose jurisdiction is founded in this way, is the fole judge competent, excluding the

10. Where one, who has not his domicile within the Applement territory, is to be fued before an inferior court rutione rei fita, the court of leffion must be applied to, whose jurisdiction is universal, and who, of course, grants letters of supplement to cite the defender to appear be-fore the inferior judge. Where the party to be sued refides in another kingdom, and has an estate in this, the court of fession is the only proper court, as the commune forum to all persons residing abroad; and the

Law of merely civil, there is a power inherent in the judge to defender, if his effate be heritable, is confidered as law. Law of fully fummoned to that court, by a citation at the mar- Scotland ket cross of Edinburgh, and pier and shore of Leith: but where a stranger, not a native of Scotland, has only a moveable effate in this kingdom, he is deemed to be fo little subject to the jurisdiction of our courts, that action cannot be brought against him till his effects be first attached by an arrestment jurisdictionis fundanda causa; which is laid on by a warrant iffuing from the supreme courts of session, or admiralty, or from that within whose territory the subject is lituated, at the fuit of the creditor.

11. A judge may, in special cases, arrest or secure Arrestments the persons of fuch as have neither domicile nor estate of strangers within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of course by the judge ordinary of either fide, against those who have their domicile upon the oppofite fide, for arrefting their perfons, till they give caution judicio fifti: and even the perfons of citizens or natives may be fo fecured, where there is just reason to sufpect that they are in meditatione fuga, i. e. that they intend fuddenly to withdraw from the kingdom; upon which fuspicion, the creditor who applies for the warrant must make oath. An inhabitant of a boroughroyal, who has furnished one who lives without the borough in meat, clothes, or other merchandize, and who has no fecurity for it but his own account-book, may arrest his debtor, till he give fecurity judicio fifti.

12. A judge may be declined, i. e. his jurifdiction Grounds of difowned judicially, 1. Ratione cause, from his incomed clinature. petency to the special cause brought before him, 2. Ratione suspecti judicis; where either the judge himself, or his near kintman, has an interest in the fuit. No judge can vote in the cause of his father, brother, or son, either by confanguinity or affinity; nor in the cause of his uncle or nephew by confanguinity. 3. Ratione privilegii; where the party is by privilege exempted

from their jurifdiction.

13. Prorogated jurisdiction (jurisdictio in consentien Prorogated tes) is that which is, by the confent of parties, confer inrifdictions red upon a judge, who, without fuch confent, would be incompetent. Where a judge is incompetent, every ftep he takes must be null, till his jurisdiction be made competent by the party's actual submission to it. It is otherwise where the judge is competent, but may be

declined by the party upon privilege.

14. In order to prorogation, the judge must have jurisdiction, such as may be prorogated. Hence, prorogation cannot be admitted where the judge's jurifdiction is excluded by flatute. Yet where the cause is of the fame nature with those to which the judge is competent, though law may have confined his jurifdiction within a certain fum, parties may prorogate it above that fum unless where prorogation is prohibited. Prorogation is not admirted in the king's causes; for the interest of the crown cannot be hurt by the negligence of its officers.

15. All judges must at their admission swear, 1. The Oaths 5% oath of allegiance, and subscribe the affurance; 2. The judges. oath of abjuration ; 3. The oath of supremacy ; lastly, The oath de fideli administratione.

16. A party who has either properly declined the Letters of jurisdiction of the judge before whom he had been ci-advocation. ted, or who thinks himfelf aggrieved by any proceed-

6.18 Scotland

ings in the cause, may, before decree, apply to the court of fession to iffue letters of advocation for calling the action from before the inferior court to themselves. The grounds, therefore, upon which a party may pray for letters of advocation, are incompetency and iniqui-Under incompetency, is comprehended not only defect of jurifdiction, but all the grounds of declining a jurisdiction, in itself competent, arising either from fuspicion of the judge, or privilege in the parties. A judge is faid to commit iniquity, when he either delays justice, or pronounces fentence, in the exercise of his jurifdiction, contrary to law

Advocation cd.

17. That the court of fession may not waste their how limit- time in trifles, no cause for a sum below twelve pounds Sterling can be advocated to the court of fession from the inferior judge competent : but if an inferior judge shall proceed upon a cause to which he is incompetent, the cause may be carried from him by advocation, let the fubject be ever so inconsiderable.

SECT. II. Of the supreme judges and courts of clvii.

I. THE king, who is the fountain of jurifdiction, King, might by our constitution have judged in all causes, either in his own person, or by those whom he was pleafed to vest with jurisdiction.

parliament. 2. The parliament of Scotland, as our court of the last refort, had the right of reviewing the fentences of

all our fupreme courts.

Parliament of Great Britain.

3. By the treaty of union, 1707, the parliaments of Scotland and England are united into one parliament of Great Britain. From this period, the British house of peers, as coming in place of the Scots parliament, is become our court of the last refort, to which appeals lie from all the supreme courts of Scotland: but that court has no original jurisdiction in civil matters, in which they judge only upon appeal. By art. 22. of that treaty, the Scots share of the representation in the house of peers is fixed to 16 Scots peers elective; and in the house of commons, to 45 commoners, of which 30 are elected by the freeholders of counties, and 15 by the royal boroughs. The Scots privy council was also thereupon abolished, and sunk into that of Great Britain, which for the future is declared to have no other powers than the English privy council had at the time of the union.

Mourt of Billion.

4. A court was erected in 1425, confifting of certain perfons to be named by the king, out of the three effates of parliament, which was vefted with the jurifdiction formerly lodged in the council, and got the name of the fellion, because it was ordained to hold annually a certain number of fessions at the places to be specially appointed by the king. This court had a jurisdiction, cumulative with the judge ordinary, in fpuilzies, and other possessory actions, and in debts; but they had no cognisance in questions of property of heritable subjects. No appeal lay from its judgments to the parliament. The judges of this court ferved by rotation, and were changed from time to time, after having fat 40 days; and became fo negligent in the administration of justice, that it was at last thought necessary to transfer the jurisdiction of this court to a council to be named by the king, called the daily gouncil.

Nº 177.

5. The prefent model of the court of fession, or col- Law of lege of justice, was formed in the reign of James V. Scotland The judges thereof, who were vefted with an univerfal civil jurisdiction, confifted originally of seven church College of men, feven laymen, and a prefident, whom it behoved justice. to be a prelate; but spiritual judges were in 1584 partly, and in 1640 totally, prohibited. The judges judges, by of fession have been always received by warrants from wh the crown. Anciently his majesty seems to have trans. med. ferred to the court itself the right of choosing their own president; and in a sederunt recorded June 26. 1503. the king condescended to present to the lords, upon every vacancy in the bench, a lift of three perfons, out of which they were to choose one. But his majesty soon refumed the exercise of both rights, which continued with the crown till the usurpation; when it was ordained, that the king should name the judges of the fession, by the advice of parliament. After the restoration, the nomination was again declared to be folely in the fovereign.

6. Though judges may, in the general case, be na-Their qu med at the age of 21 years, the lords of fession must incations be at least 25. No person can be named lord of session, and trial. who has not ferved as an advocate or principal clerk of fession for five years, or as a writer to the fignet for ten: and in the case of a writer to the fignet, he must undergo the ordinary trials upon the Roman law, and be found qualified two years before he can be named. Upon a vacancy in the bench, the king prefents the fucceffor by a letter addressed to the lords, wherein he requires them to try and admit the person presented. The powers given to them to reject the prefentee upon trial are taken away, and a bare liberty to remonstrate

fubstituted in its place.

7. Befides the 15 ordinary judges, the king was allowed to name three or four lords of his great council, who might fit and vote with them. These extraordinary lords were suppressed in the reign of Geo. I.

8. The appellation of the college of justice is not con-Privileges fined to the judges, who are diffinguished by the name of the coll of fenators; but comprehends advocates, clerks of fef-lege of ju fion, writers to the fignet, and others, as described, AR S. 23d Feb. 1687. Where, therefore, the college of justice is intitled to any privilege, it extends to all the members of the college. They are exempted from watching, warding, and other fervices within borough; and from the payment of ministers stipends, and of all customs, &c. imposed upon goods carried to or from the city of Edinburgh. Part of these privileges and immunities were lately called in question by the city of Edinburgh; but they were found by the court of seffion (affirmed upon appeal) to be in full force.

9. Though the jurifdiction of the fession be properly Jurisdiction limited to civil causes, the judges have always sustained of the selthemselves as competent to the crime of falselood. fion, Where the falsehood deserves death or demembration, they, after finding the crime proved, remit the criminal to the court of jufficiary. Special statute has given to the court of fession jurisdiction in contraventions of law-burrows, deforcements, and breach of arrestment; and they have been in use to judge in battery pendente

lite, and in usury.

10. In certain civil causes, the jurisdiction of the feffion is exclusive of all inferior jurisdictions; as in declarators of property, and other competitions of heri-

Tufficiary court.

Law of table rights, provings of the tenor, ceffiones bonorum, Scotland. restitution of minors, reductions of decrees or of writings, fales of the estates of minors or bankrupts, &c. In a fecond class of causes, their jurisdiction can be only exercifed in the way of review, after the cause is brought from the inferior court; as in maritime and confistorial causes, which must be pursued in the first instance before the admiral or commissary; and in actions below twelve pounds Sterling, which must be commenced before the judge-ordinary. In all civil actions, which fall under neither of these classes, the jurisdiction of the fession is concurrent, even in the first instance, with that of the judge-ordinary. The fession may proceed as a court of equity by the rules of conscience, in abating the rigour of law, and giving aid in proper cases to fuch as in a court of law can have no remedy : and this power is inherent in the supreme court of every country, where separate courts are not established for law and for equity.

This court formerly met upon the 12th day of June and rose upon the 11th day of August for the fummer fession; but now, in consequence of an act paffed in the fession of parliament 1700, it meets on the 12th of May and rifes on the 11th of July for the fummer fession; the winter sederunt still remaining as formerly, viz. from the 12th of November to the 11th

of March inclusive.

11. The supreme criminal judge was styled the Jufficiar; and he had anciently an universal civil jurisdiction, even in matters of heritage. He was obliged to hold two juffice courts or ayres yearly at Edinburgh or Peebles, where all the freeholders of the kingdom were obliged to attend. Besides this univerfal court, special justice ayres were held in all the different shires in the kingdom twice in the year. These last having gone into difuse, eight deputies were appointed. two for every quarter of the kingdom, who should make their circuits over the whole in April and October.

12. The office of deputies was suppressed in 1672: and five lords of fession were added, as commissioners of jufficiary, to the juffice-general and juffice-clerk. The justice general, if present, is constant president of the court, and in his absence the justice-clerk. The kingdom is divided into three diffricts, and two of the judges are appointed to hold circuits in certain boroughs of each district twice in the year; one judge may proceed to bufiness in the absence of his colleague. In trials before this court the evidence was always taken down in writing till the act 23d Geo. III. was paffed; by which the judges may try and determine all causes by the verdict of an affize upon examining the witneffes viva voce without reducing the testimony into writing, unless it shall appear more expedient to proceed in the former way, which they have it in their power to do. This act was at first temporary, but is now made perpetual by 27th Geo. III. cap. 18.

13. By an old statute, the crimes of robbery, rape, murder, and wilful fire raifing, (the four pleas of the Crown), are faid to be referved to the King's court of justiciary; but the only crime in which, de praxi, the jurisdiction of justiciary became at last exclusive of all inferior criminal jurisdiction, was that of high treason. The court of jufficiary, when fitting at Edinburgh, has a power of advocating causes from all inferior criminal judges, and of fulpending their fentences.

Vol. IX. Part II.

14. The circuit-court can also judge in all criminal Law of causes which do not infer death or demembration, upon appeal from any inferior court within their diffrict : and has a supreme civil jurisdiction, by way of appeal, in all causes not exceeding twelve pounds Sterling, in which their decrees are not subject to review ; but no appeal is to lie to the circuit, till the cause be finally determined in the infeior court.

15. The court of exchequer, as the King's cham-Court of berlain court, judged in all questions of the revenue. In excheques. pursuance of the treaty of Union, that court was abolished, and a new court erected, confishing of the Lord High Treasurer of Great Britain, and a chief Baron. with four other Barons of Exchequer; which Barons are to be made of ferjeants at law, English barristers. or Scots advocates of five years flanding. This court has a privative jurisdiction conferred upon it, as to the duties of customs, excise, or other revenues appertaining to the king or prince of Scotland, and as to all honours and estates that may accrue to the crown ; in which matters, they are to judge by the forms of proceeding used in the English court of exchequer, under the following limitations; that no debt due to the crown shall affect the debtor's real estate in any other manner than fuch estate may be affected by the laws of Scotland, and that the validity of the crown's titles to any honours or lands shall continue to be tried by the court of fession. The barons have the powers of the Scots court transferred to them, of passing the accounts of sheriffs, or other officers who have the execution of writs issuing from, or returnable to, the court of exchequer, and of receiving refignations, and paffing fignatures of charters, gifts of casualties, &c. But tho' all these must pass in exchequer, it is the court of seffion only who can judge of their preference after they are completed.

16. The jurisdiction of the admiral in maritime Admirals causes was of old concurrent with that of the session. court. The high-admiral is declared the king's juffice general upon the feas, on fresh water within flood mark, and in all harbours and creeks. His civil jurifdiction extends to all maritime causes; and so comprehends queftions of charter-parties, freights, falvages, bottomries, &c. He exercises this supreme jurisdiction by a delegate, the judge of the high court of admiralty; and he may also name inferior deputies, whose jurisdiction is limited to particular diffricts, and whose sentences are fubject to the review of the high court. In causes which are declared to fall under the admiral's cognizance, his jurisdiction is sole; in so much, that the session itfelf, though it may review his decrees by suspension or reduction, cannot carry a maritime question from him by advocation. The admiral has acquired, by ufage, a jurisdiction in mercantile causes, even where they are not strictly maritime, cumulative with that of the judge-ordinary.

17. All our supreme courts have seals or signets, pro- Signets. per to their feveral jurisdictions. The courts of fession and justiciary used formerly the same fignet, which was called the king's, because the writs iffuing from thence run in the king's name ; and though the justiciary got at last a separate fignet for itself, yet that of the session still retains the appellation of the king's fignet. In this office are fealed furnmonfes for citation, letters of executorial diligence, or for staying or prohibiting of dili-

gence

Law of Scotland.

gence, and generally whatever passes by the warrant of the fession, and is to be executed by the officers of the court. All these must, before fealing, be figned by the writers or clerks of the fignet : But letters of diligence, where they are granted in a depending process, merely for probation, though they pais by the fignet, mult be fubferibed by a clerk of fession. The clerks of the fignet also prepare and subscribe all fignatures of charters, or other royal grants, which pass in exchequer.

clviii. SECT. III. Of the inferior judges and courts of

Sheriff

SHERIFF, (from reeve, governor, and fbeer to cut or divide), is the judge-ordinary conflituted by the crown over a particular division or county. The sheriff's jurifdiction, both civil and criminal, was, in ancient times, nearly as ample within his own territory as that of the supreme courts of session and justiciary was over the whole kingdom.

2. His civil jurisdiction now extends to all actions upon contracts, or other perfonal obligations; forthcomings, poindings of the ground, mails and duties; and to all poffesfory actions, as removings, ejections, fpuilzies, &c. ; to all brieves iffuing from the chancery, as of inquest, terce, division, tutory, &c.; and even to adjudications of land effates, when proceeding on the renunciation of the apparent heir. His present criminal jurifdiction extends to certain capital crimes, as theft, and even murder, though it be one of the pleas of the crown; and he is competent to most questions of public police, and has a cumulative jurifdiction with juftices of the peace in all riots and breaches of the peace.

3. Sheriffs have a ministerial power, in virtue of which they return juries, in order to the trial of causes that require juries. The writs for electing members of parliament have been, fince the union, directed to the sheriffs, who, after they are executed, return them to the crown-office from whence they issued. They also execute writs iffuing from the court of exchequer; and in holding them. It has been lately, however, found by the general, take care of all estates, duties, or cafualties that fall to the crown within their territory, for which

they must account to the exchequer.

Lord of regality.

4. A lord of regality was a magistrate who had a grant of lands from the fovereign, with royal jurisdiction annexed thereto. His civil jurisdiction was equal to that of a shcriff; his criminal extended to the four pleas of the crown. He had a right to repledge or reclaim all criminals, fubject to his jurisdiction, from any other competent court, though it were the justiciary itself, to his own. He had also right, according to the most common opinion, to the fingle escheat of all denounced persons residing within his jurisdiction, even though fuch privilege had not been expressed in the grant of regality.

tewart.

Bailie.

5. The flewart was the magistrate appointed by the king over fuch regality lands as happened to fall to the crown by forfeiture, &c. and therefore the flewart's jurifdiction was equal to that of a regality. The two flewartries of Kirkcudbright, and of Orkney and Zetland, make shires or counties by themselves, and fend each a representative to parliament.

6. Where lands not erected into a regality fell into the king's hands, he appointed a bailie over them, whose jurisdiction was equal to that of a sheriff.

7. By the late jurisdiction act, 20 Geo. II. all heri- Law of table regalities and bailieries, and all fuch heritable Scorland. theriffships and flewartries as were only parts of a thire, are diffelved; and the powers formerly vested in them are made to devolve upon fuch of the king's courts as these powers would have belonged to if the jurisdictions diffolved had never been granted. All fheriffships and flewartries that were no part of a shire, where they had been granted, either heritably or for life, are refumed and annexed to the crown. No high sheriff or stewart can hereafter judge personally in any cause. One sherisf or stewart-depute is to be appointed by the king in every shire, who must be an advocate of three years standing; and whose office as sheriff or stewart-depute is now by 28. Geo. 1I. held ad vitam aut culpam.

8. The appanage, or patrimony, of the prince of Prince of Scotland, has been long erected into a regality-jurif- Scotlard. diction, called the Principality. It is personal to the king's eldeit fon, upon whose death or succession it returns to the crown. The prince has, or may have, his own chancery, from which his writs iffue, and may name his own chamberlain and other officers for receiving and managing his revenue. The vaffals of the princes are intitled to elect, or 10 be elected, members

of parliament for counties, equally with those who hold of the crown.

9. Justices of the peace are magistrates named by the fovereign over the feveral counties of the kingdom. for the special purpose of preserving the public peace. Anciently their power reached little farther than to bind over diforderly persons for their appearance before the privy council or justiciary; afterwards they were anthorifed to judge in breaches of the peace, and in most of the laws concerning public policy. They may compel workmen or labourers to ferve for a reasonable fee, and they can condemn mafters in the wages due to their servants. They have power to judge in questions of highways, and to call out the tenants with their cottars and fervants to perform fix days work yearly for upcourt of fession, that justices have no jurisdiction whatever in common actions for debt. So that it now feems fixed, that they are incompetent in such actions, except where they are declared competent by fpecial flatute.

10. Since the union, our justices of the peace, over and above the powers committed to them by the laws of Scotland, are authorifed to exercise whatever belonged to the office of an English justice, in relation to the public peace. From that time, the Scots and the English commissions have run in the same ftyle, which contain powers to inquire into and judge in all capital crimes, witchcrafts, felonies, and feveral others fpecially enumerated; with this limitation subjoined, of which justices of the peace may lawfully in-quire. Two justices can constitute a court. Special flatute has given the cognizance of feveral matters of excise to the justices, in which their fentences are final. As to which, and the powers thereby vested in them, the reader must of necessity be referred to the excise laws; it not falling within the plan of this work, to enter into fo very minute a detail as that would prove.

11. A borough is a body-corporate, made up of Brough the inhabitants of a certain tract of ground erected by the fovereign, with jurisdiction annexed to it. Bo-

Barons

Law of roughs are creeted, either to be holden of the fovereign Scotland, himfelf, which is the general case of royal boroughs; or of the superior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their charters, to choose annually certain office bearers or magistrates; and in boroughs of regality and barony, the nomination of magistrates is, by their charter, lodged fometimes in the inhabitants, fometimes in the fuperior. Bailies of boroughs have jurisdiction in matters of debt, fervices, and questions of possession betwixt the inhabitants. Their criminal jurisdiction extends to petty riots, and reckless fire railing. The dean of guild is that magistrate of a royal borough who is head of the merchant company; he has the cognizance of mercantile causes within borough; and the inspection of buildings, that they encroach neither on private property, nor on the public ftreets; and he may direct infufficient houses to be pulled down. His jurisdiction has no dependence on the court of the borough, or bailie-court.

12. A baron, in the large fenfe of that word, is one who holds his lands immediately of the crown; and, as fuch, had, by our ancient constitution, right to a feat in parliament, however fmall his freehold might have been. The leffer barons were exempted from the burden of attending the fervice of parliament. This exemption grew infentibly into an utter difability in all the leffer barons from fitting in parliament, without election by the county; though no flatute is to be found expressly excluding them.

13. To conflitute a baron in the ftrict law fenfe, his lands must have been erected, or at least confirmed, by the king, in liberam baroniam; and fuch baron had a certain jurifdiction, both civil and criminal, which he might have exercised, either in his own person, or by

14. By the late jurifdiction-act, the civil jurifdiction of a baron is reduced to the power of recovering. from his vaffals and tenants, the rents of his lands, and of condemning them in mill-fervices; and of judging in causes where the debt and damages do not exceed 40 s. Sterling. His criminal jurifdiction is, by the fame flatute, limited to affaults, batteries, and other fmal er offences, which may be punished by a fine not exceeding 20 s. Sterling, or by fetting the offender in the flocks in the day-time not above three hours; the fine to be levied by poinding, or one month's imprisonment. The jurisdiction formerly competent to proprietors of mines, and coal or falt works, over their workmen, is referved; and also that which was competent to proprietors who had the right of fairs or markets, for correcting the diforders that might happen during their continuance; provided they shall exercife no jurisdiction inferring the loss of life or demembration

15. The high conftable of Scotland had no fixed territorial jurifdiction, but followed the court; and had, jointly with the marifchal, the cognizance of all orimes committed within two leagues of it. All other conflabularies were dependent on him: thefe had caftles, and fometimes boroughs, subject to their jurisdiction, as Dundee, Montrofe, &c. and among other powers, now little known, they had the right of exerciting criminal jurisdiction within their respective territories du- to name commendators for life, and without any obli-

ring the continuance of fairs. By the late jurifdiction- Law of act, all jurifdictions of conflabulary are diffolved, ex- Scotland. cept that of high-conflable.

16. The office of the Lyon King of arms was chief- Lyon king ly ministerial, to denounce war, proclaim peace, carry at arms. public messages, &c. But he has also a right of jurisdiction, whereby he can punish all who usurp arms contrary to the law of aims, and deprive or fuspend messengers, heralds, or pursuivants, (who are officers named by himself); but he has no cognizance of the damage arifing to the private party through the melfenger's fault. Messengers are subservient to the fupreme courts of fession and justiciary; and their proper bufiness is to execute all the king's letters either in civil or criminal causes. They must find caution for the proper discharge of their duty qua messengers; and in case of any malversation, or neglect, by whic." damage arises to their employers, their fureties may be recurred upon for indemnification. These sureties, however, are not answerable for the conduct of the messenger in any other capacity but qua fuch; and therefore, if a messenger is authorised to uplift payment from a debtor, and fails to account to his employer, the cautioner is not liable; his obligation extending only to the regular and proper duties of the office in executing the diligence, or the like.

17. Our judges had, for a long time, no other fa- Sentencelaries or appointments than what arose from the fen-money. tences they pronounced. Our criminal judges applied to their own use the fines or issues of their several courts; and regalities had a right to the fingle escheat of all perfors denounced, who refided within their jurisdiction; and our civil judges got a certain proportion of the fum contained in the decree pronounced. But these were all prohibited upon regular salaries be-

ing fettied upon them.

SECT. V. Of eccleficatical perfons.

clim

THE Pope, or bishop of Rome, was long acknow. The pope. ledged, over the weltern part of Christendom, for the head of the Christian church. The papal jurisdiction was abolished in Scotland anno 1560. The king was, by act 1669, declared to have supreme authority over all persons, and in all causes ecclesiastical; but this act was repealed by 1690, as inconfiftent with Presbyterian church government, which was then upon the point of

being ettablished. 2. Before the reformation from Popery, the clergy Clergy. was divided into fecular and regular. The fecular had a particular tract of ground given them in charge, within which they exercised the pastoral office of bishop, presbyter, or other church-officer. The regular clergy had no cure of fouls; but were tied down to refidence in their abbacies, priories, or other monasteries: and they got the name of regular, from the rules of mortification to which they were bound, according to the institution of their several orders. Upon the vacancy of any benefice, whether fecular or regular, commendators were frequently appointed to levy the fruits, as factors or itewards during the vacancy. The Pope alone could give the higher benefices in commendam; and at last, from the plenitude of his power, he came

4 N 2

Conflabu laries.

Law-of Scotland

gation to account. After the reformation, feveral abbacies and priories were given by James VI. in perpetuam commendam, to laics.

3. Upon abolishing the Pope's authority, the regular elergy were totally suppressed; and, in place of all the different degrees which diffinguished the secular clergy, we had at first only parochial presbyters or minifters, and superintendants, who had the overlight of the church within a certain district : foon thereafter the church-government became episcopal by archbifhops, bishops, &c.; and after some intermediate turns, is now preflyterian by kirk fellions, preflyteries, fy-

nods, and general affemblies.

4. Prelate, in our flatutes, fignifies a bishop, abbot, or other dignified clergyman, who in virtue of his office had a feat in parliament. Every bishop had his chapter, which confifted of a certain number of the ministers of the diocese, by whose affistance he managed the affairs of the church within that district. The nomination of bishops to vacant sees has been in the crown fince 1540, though under the appearance of continuing the ancient right of election, which was in the chapter. The confirmation by the crown under the great feal, of the chapter's election, conferred a right to the spirituality of the benefice; and a second grant, upon the confecration of the bishop-elect, gave a title to the temporality; but this fecond grant fell foon into difufe.

Patronage.

5. He who founded or endowed a church was intitled to the right of patronage thereof, or advocatio ecclefia; whereby, among other privileges, he might present a churchman to the cure, in case of a vacancy. The presentee, after he was received into the church, had a right to the benefice proprio jure; and if the church was parochial, he was called a parson. The Pope claimed the right of patronage of every kirk to which no third party could flew a special title; and, fince the reformation, the crown, as coming in place of the Pope, is confidered as univerfal patron, where no right of patronage appears in a fubject. Where two churches are united, which had different patrons, each patron prefents by turns.

6. Gentlemen of ellates frequently founded colleges or collegiate churches; the head of which got the name of provolt, under whom were certain prebendaries, or canons, who had their feveral stalls in the church, where they fung maffes. Others of leffer fortunes founded chaplainries, which were donations granted for the finging of masses for deceased friends at particular altars in a church. Though all these were suppressed npon the reformation, their founders continued patrons of the endowments; out of which they were allowed to provide burfars, to be educated in any of the

universities.

7. Where a fund is gifted for the establishment of a fecond minister in a parish where the cure is thought too heavy for one, the patronage of fuch benefice does not belong to the donor, but to him who was patron of the church, unless either where the donor has referved to himself the right of patronage in the donation, or where he and his fucceffors have been in the constant use of presenting the second minister, without challenge from the patron. The right of prefenting incumbents was by 1690, c. 23. taken from patrons, and refled in the heritors and elders of the parish, upon

payment to be made by the heritors to the patron of Law of 600 merks; but it was again restored to patrons, 10 Scotland An. c. 12. with the exception of the presentation fold in purfuance of the former act.

8. Patrons were not fimply administrators of the Patrons church; for they held the fruits of the vacant benefice as their own, for fome time after the reformation. But

that right is now no more than a trust in the patron, who must apply them to pious uses within the parish. at the fight of the heritors, yearly as they fall due. If he fail, he loses his right of administering the vacant flipend for that and the next vacancy. The king, who is exempted from this rule, may apply the vacant flipend of his churches to any pious use, though not within the parish. If one should be ordained to a church, in opposition to the presentee, the patron, whose civil right cannot be affected by any sentence of a church court, may retain the stipend as vacant. Patrons are to this day intitled to a feat and burial-place in the churches of which they are patrons, and to the

right of all the teinds of the parish not heritably difponed.

9. That kirks may not continue too long vacant, the patron must present to the presbytery (formerly to the bishop), a fit person for supplying the cure, within fix months from his knowledge of the vacancy, otherwife the right of prefentation accrues to the prefbytery jure devoluto. Upon presentation by the patron, the bishop collated or conferred the benefice upon the prefentee by a writing, in which he appointed certain minifters of the diocese to induce or institute him into the church; which induction completed his right, and was performed by their placing him in the pulpit, and delivering to him the bible and keys of the church. The bishop collated to the churches of which himself was patron, pleno jure, or without prefentation; which he alfo did in menfal churches, whose patronages were funk, by the churches being appropriated to him, as part of his patrimony. Since the revolution, a judicial act of admission by the presbytery, proceeding either upon a prefentation, or upon a call from the heritors and elders, or upon their own jus devolutum, completes the minister's right to the benefice.

10. Soon after the reformation, the Popish church- Pravision men were prevailed upon to refign in the fovereign's for the rehands a third of their benefices; which was appropri-formed ated, in the first place, for the subfistence of the reform-clergy. ed clergy. To make this fund effectual, particular localities were affigned in every benefice, to the extent of a third, called the assumption of thirds; and for the farther support of ministers, Queen Mary made a grant in their favour of all the fmall benefices not exceeding 300 merks. Bishops, by the act which restored them to the whole of their benefices, were obliged to maintain the ministers within their dioceses, out of the thirds; and in like manner, the laic titulars, who got grants of the teinds, became bound, by their accepta-

tion thereof, to provide the kirks within their erec-

tions in competent flipends. 11. But all those expedients for the maintenance of Commisthe clergy having proved ineffectual, a commission of son for parliament was appointed in the reign of James VI. planting for planting kirks, and modifying flipends to ministers hing out of the teinds; and afterwards feveral other come teinds, &ce. missions were appointed, with the more ample powers

Stipends

Manfe.

Law of of dividing large parishes, erecting new ones, &c. all Sootland. of which were, in 1707, transferred to the court of fession, with this limitation, that no parish should be

disjoined, nor new church erected, nor old one removed to a new place, without the confent of threefourths of the heritors, computing the votes, not by their numbers, but by the valuation of their rents within the parish. The judges of fession, when sitting in that court, are confidered as a commission of parliament, and have their proper clerks, macers, and o-

ther officers of court, as fuch.

12. The lowest stipend that could be modified to a minister by the first commission, was 500 merks, or five chalders of victual, unless where the whole teinds of the parish did not extend so far: and the highest was 1000 merks, or ten chalders. The parliament 1633 raifed the minimum to eight chalders of victual. and proportionably in filver; but as neither the commission appointed by that act, nor any of the subsequent ones, was limited as to the maximum, the commissioners have been in use to augment stipends considerably above the old maximum, where there is fufficiency of free teinds, and the cure is burdenfome, or living expensive.

13. Where a certain quantity of flipend is modified to a minister out of the teinds of a parish, without proportioning that stipend among the several heritors, the decree is called a decree of modification: but where the commissioners also fix the particular proportions payable by each heritor, it is a decree of modification and locality. Where a stipend is only modified, it is fecured on the whole teinds of the parifli, fo that the minister can insist against any one heritor to the full extent of his teinds; fuch heritor being always intitled to relief against the rest for what he shall have paid above his just share: but where the stipend is al-To localled, each heritor is liable in no more than his

own proportion.

14. Few of the reformed ministers were, at first, provided with dwelling houses; most of the Popish clergy having, upon the first appearance of the reformation, let their manses in feu, or in long cacks: miniflers therefore got a right, in 1563, to as much of thefe manfes as would ferve them, notwithstanding fuch feus or tacks. Where there was no parfon's nor vicar's manfe, one was to be built by the heritors, at the fight of the bishop, (now the presbytery), the charge not exceeding L. 1000 Scots, nor below 500 merks. Under a manfe are comprehended stable, barn, and byre, with a garden; for all which it is usual to allow half an acre of ground.

15. Every incumbent is intitled at his entry to have his manfe put in good condition; for which purpose, the presbytery may appoint a vilitation by tradefmen, and order estimates to be laid before them of the sums necessary for the repairing, which they may proportion among the heritors according to their valuations. The preflytery, after the manfe is made fufficient, ought, upon application of the heritors, to declare it a free manfe; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwise he or his executors shall be liable in damages; but they are not bound to make up the lofs arifing from the necessary decay of the building by the waste of time.

. 16. All ministers, where there is any landward or Law of country parish, are, over and above their flipend, in- Scotland. titled to a glebe, which comprehends four acres of a-Glebe, and rable land, or fixteen fowms of pasture-ground where there is no arable land (a fowm is what will graze ten fheep or one cow); and it is to be defigned or marked by the bishop or presbytery out of such kirklands within the parish as lie nearest to the kirk, and, in default of kirk-lands, out of temporal lands.

17. A right of relief is competent to the heritors. whose lands are fet off for the manse or glebe, against the other heritors of the parish. Manses and glebes, being once regularly defigned, cannot be feued or fold by the incumbent in prejudice of his fucceffors, which is in practice extended even to the case where such alienation evidently appears profitable to the benefice.

18. Ministers, beside their glebe, are intitled to Grafe. grass for a horse and two cows. And if the lands, out of which the grafs may be defigned, either lie at a diffance, or are not fit for pasture, the heritors are to pay to the minister L. 20 Scots yearly as au equivalent. Ministers have also freedom of foggage, pasturage, fuel, feal, divot, loaning, and free ish and entry, according to use and wont : but what these privileges are, must be determined by the local custom of

the feveral parishes. 19. The legal terms at which stipends become due Terms of to ministers are Whitfunday and Michaelmas. If the payment of incumbent be admitted to his church before Whitfug-Itipends. day (till which term the corns are not prefumed to be fully fown), he has right to that whole year's flipend; and, if he is received after Whitfunday, and before Michaelmas, he is intitled to the half of that year; because, though the corns were fown before his entry, he was admitted before the term at which they are prefumed to be reaped. By the same reason, if he dies or is transported before Whitfunday, he has right to no part of that year; if before Michaelmas, to the half; and if not till after Michaelmas, to the whole.

20. After the minister's death, his executors have Annat or right to the annat; which, in the fense of the canon ann. law, was a right referved to the Pope, of the first year's fruits of every benefice. Upon a threatened invalion from England anno 1547, the annat was given by our parliament, notwithstanding this right in the Pope, to the executors of fuch churchmen as should fall in battle in defence of their country : but the word annat or ann, as it is now understood, is the right which law gives to the executors of ministers, of half a year's benefice over and above what was due to the

minister himself for his incumbency.

21. The executors of a minister need make up no title to the ann by confirmation: neither is the right affiguable by the minister, or affectable with his debts : for it never belonged to him, but is a mere gratuity given by law to those whom it is prefumed the deceased could not sufficiently provide; and law has given it expressly to executors: and if it were to be governed by the rules of fuccession in executory, the widow, in case of no children, would get one half, the other would go to the next of kin; and where there are children, she would be intitled to a third, and the other two thirds would fall equally among the children. But the court of fellion, probably led by the general practice.

clr.

practice, have in this last case divided the ann into two equal parts, of which one goes to the widow, and the other among the children in capita.

Turifdiction of bifhons.

22. From the great confidence that was, in the first ages of Christianity, reposed in churchmen, dying perfons frequently committed to them the care of their estates, and of their orphan children; but these were fimply rights of trull, not of jurifdiction. The clergy foon had the address to establish to themselves a proper junisdiction, not confined to points of ecclefiaffical right, but extending to questions that had no concern with the church. They judged not only in teinds, patronages, testaments, breach of vow, scandal, &c. but in questions of marriage and divorce, because marriage was a facrament; in tochers, because these were given in confideration of marriage; in all queftions where an oath intervened, on pretence that oaths were a part of religious worship, &c. churchmen came, by the means of this extentive jurifdiction, to be diverted from their proper functions, they committed the exercise of it to their officials or commissaries: hence the commissary-court was called the Bifbop's Court, and Curia Christianitatis; it was also fivled the Confisorial Court ; from confistory, a name first given to the court of appeals of the Roman emperors, and afterwards to the courts of judicature held by churchmen.

Commiffary.

23. At the reformation, all episcopal jurisdiction, exercised under the authority of the bishop of Rome, was abolished. As the course of justice in confistorial causes was thereby stopped, Q. Mary, besides naming a commiffary for every diocefe, did, by a special grant, eflablish a new commissary-court at Edinburgh, confifting of four judges or commissaries. This court is velled with a double jurisdiction; one diocesan, which is exercised in the special territory contained in the grant, viz. the counties of Edinburgh, Haddington, Linlithgow, Peebles, and a great part of Stirlingshire ; and another universal, by which the judges confirm the testaments of all who die in foreign parts, and may reduce the decrees of all inferior commissaries, provided the reduction be purfued within a year after the decree. Bishops, upon their re-establishment in the reign of James VI. were reftored to the right of naming their feveral commissaries.

24. As the clergy, in times of Popery, affumed a jurifdiction independent of the civil power or any fecular court, their fentences could be reviewed only by the Pope, or judges delegated by him; fo that, with regard to the courts of Scotland, their jurisdiction was fupreme. But, by an act 1560, the appeals from our bishops courts, that were then depending before the Roman confistories, were ordained to be decided by the court of fession: and by a posterior act, 1609, the fession is declared the king's great consistory, with power to review ail fentences pronounced by the commissaries. Nevertheless, since that court had no inherent jurifdiction in confistorial causes prior to this statute, and fince the flatute gives them a power of judging only by way of advocation, they have not, to this day, any proper confistorial jurisdiction in the first instance; neither do they pronounce sentence in any confiftorial cause brought from the commissaries, but remit it back to them with inftructions. By the practice immediately subsequent to the act before quoted,

they did not admit advocations from the inferior commiffaries, till the cause was first brought before the Scotland commissaries of Edinburgh; but that practice is now in difuse.

25. The commissaries retain to this day an exclusive power of judging in declarators of marriage, and of the nullity of marriage; in actions of divorce and of non-adherence, of adultery, baltardy, and confirmation of testaments; because all these matters are still confidered to be properly confiltorial. Inferior commissaries are not competent to questions of divorce, under which are comprehended questions of battardy and adherence, when they have a connection with the lawfulnefs of marriage, or with adultery.

26. Commissaries have now no power to pronounce decrees in absence for any sum above L. 40 Scots, except in causes properly consistorial; but they may authenticate rutorial and curatorial inventories; and all bonds, contracts, &c. which contain a clause for reg fration in the books of any judge competent, and protests on bills, may be registered in their books.

SECT. VI. Of marriage.

Persons, when confidered in a private capacity, are chiefly diftinguished by their mucual relations; as hufband and wife, tutor and minor, father and child, mafter and fervant. The relation of hufband and Marriage. wife is constituted by marriage; which is the conjunction of man and wife, vowing to live infeparably

2. Marriage is truly a contract, and fo requires the confent of parties. Idiots, therefore, and furious perfons, cannot marry. As no perfon is prefumed capable of confent within the years of pupillarity, which, by our law, lasts till the age of 14 in males, and 12 in females, marriage cannot be contracted by pupils; but if the married pair shall cohabit after puberty, such acquiescence gives force to the marriage. Marriage is fully perfected by confent; which, without confummation, founds all the conjugal rights and duties. The consent requisite to marriage mult be de presenti. A promise of marriage (Stipulatio Sponsalitia) may be refiled from, as long as matters are entire; but if any thing be done by one of the parties, whereby a pr.judice arises from the non-performance, the party refiling is liable in damages to the other. The canonifts, and after them our courts of justice, explain a copula subsequent to a promise of marriage into actual marriage.

3. It is n t necessary, that marriage should be cele- Form of brated by a clergyman. The confent of parties may celebration. be declared before any magiltrate, or simply before witnesses: and though no formal confent should appear, marriage is prefumed from the cohabitation, or living together at bed and board, of a man and woman who are generally reputed husband and wife. One's acknowledgment of his marriage to the midwife whom he called to his wife, and to the minister who baptized his child, was found fufficient prefumptive evidence of marriage, without the aid either of cohabitation, or of babite and repute. The father's confent was, by the Roman law, effential to the marriage of children in familia: but, by our law, children may enter into marriage, without the knowledge, and even against the remonstrances, of a father.

4. Mar

art III. Law of cotiand.

4. Marriage is forbidden within certain degrees of blood. By the law of Moles (Leviticus xviii.), which, by the act 1567. c. 15. has been adopted by us, feconds in blood, and all remoter degrees, may all lawfully marry. By feconds in blood are meant first coufins. Marriage in the direct line is forbidden in infinitum; as it is also in the collateral line in the special case where one of the parties is loco parentis to the other, as grand-uncle, great grand-uncle, &c. with refpect to his grand niece, &c. The fame degrees that are prohibited in confanguinity, are prohibited in affinity; which is the tie arifing from marriage, betwixt one of the married pair, and the blood relations of the other. Marriage also, where either of the parties is bunds of naturally unfit for generation, or flands already mar-

ried to a third person, is ibso jure null.

5. To prevent bigamy and incestuous marriages, the church has introduced proclamation of banns; which is the ceremony of publishing the names and defignations of those who intend to intermarry, in the churches where the bride and bridegroom refide, after the congregation is affembled for divine fervice; that all perfons who know any objection to the marriage may offer it. When the order of the church is obferved, the marriage is called regular; when otherwife, clandestine. Marriage is valid when entered into in either of these ways; but when clandestine, there are certain penalties imposed upon the parties as well as the celebrator and witnesses.

6. By marriage, a fociety is created between the married pair, which draws after it a mutual communication of their civil interests, in as far as is necessary for maintaining it. As the fociety lasts only for the joint lives of the focii; therefore rights that have the nature of a perpetuity, which our law flyles heritable, are not brought under the partnership or communion of goods; as a land-effate, or bonds bearing a yearly interest: it is only moveable subjects, or the fruits produced by heritable subjects during the marriage, that

become common to man and wife.

7. The husband, as the head of the wife, has the fole right of managing the goods in communion, which is called jus mariti. This right is fo abfolute, that it bears but little resemblance to a right of administering a common fubject. For the husband can, in virtue thereof, fell, or even gift, at his pleafure, the whole goods falling under communion; and his creditors may affect them for the payment of his proper debts : fo that the jus mariti carries all the characters of an affignation, by the wife to her husband, of her moveable effate. It arises ipso jure from the marriage; and therefore needs no other conflictation. But a stranger may convey an effate to a wife, fo as it shall not be fubject to the husband's administration; or the husband himfelf may, in the marriage-contract, renounce his jus mariti in all or any part of his wife's moveable

8. From this right are excepted paraphernal goods, which, as the word is understood in our law, comprehends the wife's wearing apparel, and the ornaments proper to her person; as necklaces, ear-rings, breast or arm jewels, buckles, &c. These are neither alienable by the husband, nor affectable by his creditors. Things of promifeuous use to husband and wife, as plate, medals, &c. may become paraphernal, by the husband's giving them to the wife, at or before marriage; but they are paraphernal only in regard to that husband who gave them as such, and are esteemed common moveables, if the wife, whose paraphernalia they were, be afterwards married to a fecond hufband; unless he shall in the same manner appropriate them to her,

Q. The right of the hufband to the wife's moveable Burdens afestate, is burdened with the moveable debts contracted feeting the by her before marriage: and as his right is univerfal jus maritifo also is his burden; for it reaches to her whole moveable debts, though they should far exceed her moveable estate. Yet the husband is not considered as the true debtor in his wife's debts. In all actions for payment, the is the proper defender: the husband is only cited for his interest, that is, as curator to her, and administrator of the fociety-goods. As foon therefore as the marriage is diffolved, and the fociety goods thereby fuffer a division, the husband is no faither concerned in the share belonging to his deceased wife; and confequently is no longer liable to pay her debts. which must be recovered from her reprefentatives, or her feparate effate.

10. This obligation upon the husband is, however, However perpetuated against him (1.) Where his proper estate, tended areal or personal, has been affected, during the marriage, gainst the by complete legal diligence; in which case, the hush husband. band must, by the common rules of law, relieve his

property from the burden with which it stands charged; but the utmost diligence against his person is not fufficient to perpetuate the obligation; nor even incomplete diligence against his estate. (2.) The husband continues liable, even after the wife's death, in so far as he is lucratus or profited by her effate : Still, howe ever, the law does not confider a hufband who has got but a moderate tocher with the wife as lucratus by the marriage; it is the excess only which it considers as lucrum, and that must be estimated by the quality of the parties and their condition of life, -- As he was at no time the proper debtor in his wife's moveable debtas therefore, though he should be lucratus, he is, after the diffolution, only liable for them fubfidiarie, i. e. if her own feparate estate is not fufficient to pay them

It. Where the wife is debtor in that fort of debt, which, if it had been due to her, would have excluded the jus mariti, e. g. in bonds bearing interest, which, as we shall afterwards see (clxiii. 4.), continues heritable as to the rights of husband and wife, notwithtlanding of the enactment of the flature 1661, which renders them moveable in certain other respects, the husband is liable only for the bygone interests, and those that may grow upon the debt during the marriage; because his obligation for her debts must be commensurated to the interest he has in her estate. It is the husband alone who is liable in perfonal diligence for his wife's debts, while the marriage fubfills; the wife, who is the proper debtor, is free from all perfonal execution upon them while she is vestita viro.

12. The husband by marriage becomes the perpe- The huse tual curator of the wife. From this right it arifes, band is the I. That no fuit can proceed against the wife till the wife's curb. husband be cited for his interest. 2. All deeds, done by a wife without the husband's confent, are null; neither can she sue in any action without the husband's

Law of

concurrence. Yet where the husband refuses, or by reason of forfeiture, &c. cannot concur; or where the action is to be brought against the husband himself, for performing his part of the marriage articles; the judge will authorife her to fue in her own name. The effects arising from this curatorial power discover themfelves even before marriage, upon the publication of banns; after which the bride, being no longer fui juris, can contract no debt, nor do any deed, either to the prejudice of her future husband, nor even to her own. But in order to this, it is necessary that the banns shall have been published in the bride's parishechurch as well as in that of her husband.

Separate alimony.

12. If the husband should either withdraw from his wife, or turn her out of doors; or if, continuing in family with her, he should by severe treatment endanger her life; the commiffaries will authorife a feparation a menfa et thoro, and give a separate alimony to the wife, fuitable to her husband's estate, from the time of fuch separation until either a reconciliation or a fentence of divorce.

What obligations of Aid.

14. Certain obligations of the wife are valid, notgations of the wife va- withflanding her being fub cura mariti; ex. gr. obligations arifing from delict; for wives have no privilege to commit crimes. But if the punishment resolves into a pecuniary mulct, the execution of it must, from her incapacity to fulfil, be suspended till the diffolution of the marriage, unless the wife has a separate estate exempted from the jus mariti.

15. Obligations arising from contract, affect either e person or the estate. The law has been so careful the person or the estate. to protect wives while fub cura marita, that all perfonal obligations granted by a wife, though with the husband's consent, as bonds, bills, &c. are null; with the following exceptions: (1.) Where the wife gets a separate peculium or stock, either from her father or a stranger, for her own or her children's alimony, she may grant personal obligations in relation to such stock: and by stronger reason, personal obligations granted by a wife are good, when her person is actually withdrawn from the husband's power by a judicial separation. (2.) A wife's perfonal obligation, granted in the form of a deed inter vivos, is valid, if it is not to take effect till her death. (3.) Where the wife is by the husband praposita negotiis, intrusted with the management either of a particular branch of business or of his whole affairs, all the contracts she enters into in

the exercise of her prepositura are effectual, even though

they be not reduced to writing, but should arise mere-

ly ex re, from furnishings made to her: but such obli-

gations have no force against the wife; it is the huf-

band only, by whose commission she acts, who is there-

by obliged. 16. A wife, while she remains in family with her husband, is considered as praposita negotiis domesticis; and consequently may provide things proper for the family; for the price whereof the hufband is liable, tho' they should be misapplied, or though the husband should have given her money to provide them else-where. A husband who suspects that his wife may hurt his fortune by high living, may use the remedy of inhibition against her; by which all persons are inter-

pelled from contracting with her, or giving her credit. After the completing of this diligence, whereby the propositura falls, the wife cannot bind the husband, un-Nº 177.

less for such reasonable furnishings as he cannot in- Law struct that he provided her with aliunde. As every man, and confequently every hufband, has a right to remove his managers at pleasure, inhibition may pass at the fuit of the husband against the wife, though he should not offer to justify that measure by an actual proof of the extravagance or profusion of her temper.

17. As to rights granted by the wife affecting her Rights estate; she has no moveable estate, except her para fec phernalia; and these she may alien or impignorate, estate. with confent of the husband. She can, without the husband, bequeath by testament her share of the goods in communion; but the cannot dispose of them inter vivos; for the herfelf has no proper right to them while the marriage fubfifts. A wife can lawfully oblige herfelf, in relation to her heritable estate, with confent of her husband : for though her person is in some sense funk by the marriage, the continues capable of holding a real effate; and in fuch obligations her effate is confidered, and not her person. A husband, though he be curator to his wife, can, by his acceptance or intervention, authorife rights granted by her in his own favour: for a husband's curatory differs in this respect from the curatory of minors, for it is not merely intended for the wife's advantage, but is considered as a mutual benefit to both.

18. All donations, whether by the wife to the huf. Donation band, or by the husband to the wife, are revocable by revocable the donor; but if the donor dies without revocation, cable. the right becomes absolute. Where the donation is not pure, it is not subject to revocation: thus, a grant made by the husband, in consequence of the natural obligation that lies upon him to provide for his wife, is not revocable, unless in fo far as it exceeds the measure of a rational fettlement; neither are remuneratory grants revocable, where mutual grants are made in confideration of each other, except where an onerous caufe is fimulated, or where what is given binc inde bears no proportion to each other. All voluntary contracts of separation, by which the wife is provided in an yearly alimony, are effectual as to the time past, but revocable either by the husband or wife.

19. As wives are in the strongest degree subject to Ratifilms the influence of their husbands, third parties, in whose by will favours they had made grants, were frequently vexed with actions of reduction, as if the grant had been extorted from the wife through the force or fear of the husband. To fecure the grantees against this danger. ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her hufband not present, that she was not induced to grant the deed ex vi aut metu. A wife's ratification is not absolutely necessary for securing the grantee : law indeed allows the wife to bring reduction of any deed fhe has not ratified, upon the head of force or fear; of which, if the bring fufficient evidence, the deed will be fet aside; but if she fails in the proof, it will remain effectual to the receiver.

20. Marriage. like other contracts, might, by the Different Roman law, be diffolved by the contrary confent of of manie parties; but, by the law of Scotland, it cannot be dif. riage folved till death, except by divorce, proceeding either upon the head of adultery or of wilful defertion.

21. Marriage is diffolved by death, either within year and day from its being contracted, or after year

Inhibition. against a wife.

clxi. 1

Scotland. rights granted in confideration of the marriage (unless guarded against in the contract) become void, and things return to the fame condition in which they flood before the marriage; with this restriction, that the husband is considered as a bona fide possessor, in relation to what he has confumed upon the faith of his right; but he is liable to repay the tocher, without any deduction, in confideration of his family-expence during the marriage. If things cannot be reftored on both fides, equity hinders the reftoring of one party and not the other. In a cafe which was lately before the court of fession, it was determined, after a long hearing in prefence, that where a marriage had been diffolved within the year without a living child, by the death of the husband, the widow was intitled to be alimented out of an effate of which he died poffeffed, though there were no conventional provisions flipulated in favour of the wife.

22. Upon the diffolution of a marriage, after year and day, the furviving husband becomes the irrevocable proprietor of the tocher; and the wife, where she furvives, is intitled to her jointure, or to her legal provifions. She has also right to mournings, suitable to the husband's quality; and to alimony from the day of his death till the term at which her liferent provision. either legal or conventional, commences. If a living child be procreated of the marriage, the marriage has the fame effect as if it had fublifted beyond the year. A day is adjected to the year, in majorem evidentiam, that it may clearly appear that the year itself is elapfed; and therefore, the running of any part of the day, after the year, has the same effect as if the whole were elapfed. The legal right of courtefy competent to the furviving husband is explained below,

Noclax, 28.

23. Divorce is such a separation of married persons, during their lives, as loofes them from the nuptial tie. and leaves them at freedom to intermarry with others. But neither adultery, nor wilful defertion, are grounds which must necessarily dissolve marriage; they are only handles, which the injured party may take hold of to be free. Cohabitation, therefore, by the injured party, after being in the knowledge of the acts of adultery, implies a paffing from the injury; and no divorce can proceed, which is carried on by collusion betwixt the parties, left, contrary to the first institution of marriage, they might difengage themselves by their own confent : and though, after divorce, the guilty person, as well as the innocent, may contract second marriages; yet, in the case of divorce upon adultery, marriage is by special statute (1600. c. 20.) prohibited betwixt the two adulterers.

24. Where either party has deferted from the other for four years together, that other may fue for adherence. If this has no effect, the church is to proceed, first by admonition, then by excommunication; all which previous steps are declared to be a fufficient ground for purfuing a divorce. De praxi, the commisfaries pronounce fentence in the adherence, after one year's defertion; but four years must intervene between the first defertion and the decree of divorce.

25. The legal effects of divorce on the head of defertion are, that the offending husband shall restore the exchequer; and by act 1672, no gift of tutory can tocher, and forfeit to the wife all her provisions, legal pass in exchequer, without the citation or consent of Vol. IX. Part II.

Law of and day. If it is diffolved within year and day, all and conventional; and, on the other hand, the offend. Law ing wife shall forfeit to the husband her tocher, and all Scotland the rights that would have belonged to her in the cafe of her furvivance. This was also esteemed the rule in divorces upon adultery. But by a decision of the court of fession 1662, founded on a tract of ancient decisions recovered from the records, the offending hufband was allowed to retain the tocher.

SECT. VII. Of Minors, and their tutors and curators.

1. THE stages of life principally distinguished in Pupillarity, law are, papillarity, puberty or minority, and majority. &c. A child is under pupillarity, from the birth to 14 years of age if a male, and till 12 if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of 21 years complete, both in males and females; but minority, in a large fense, includes all under age, whether pupils or puberes. Because pupils cannot in any degree act for themselves, and minors seldom with discretion, pupils are put by law under the power of tutors, and minors may put themselves under the direction of curators. Tutory is a power and faculty to Tutoff. govern the person, and administer the estate, of a pupil. Tutors are either nominate, of law, or dative.

2. A tutor nominate is he who is named by a father, in his testament or other writing, to a lawful child. Such tutor is not obliged to give caution for the faithful discharge of his office; because his fidelity is prefumed to have been fufficiently known to the fa-

3. If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwife, there is place for a tutor of law. This fort of tutory devolves upon the next agnate; by which we understand he who is nearest Agnates. related by the father, though females intervene.

4. Where there are two or more agnates equally near to the pupil, he who is intitled to the pupil's legal fuccession falls to be preferred to the others. But as the law suspects that he may not be over careful to preferve a life which stands in the way of his own interest, this fort of tutor is excluded from the custody of the pupil's person; which is commonly committed to the mother, while a widow, until the pupil be feven years old; and, in default of the mother, to the next cognate, i. e. the nighest relation by the mother. The tutor of law must (by act 1474) be at least 25 years of age. He is ferved or declared by a jury of fworn men, who are called upon a brief iffuing from the chancery, which is directed to any judge having jurisdiction. He must give fecurity before he enters upon the

management. 5. If no tutor of law demands the office, any perfon, even a stranger, may apply for a tutory dative. But because a tutor in law ought to be allowed a competent time to deliberate whether he will ferve or not, no tutory dative can be given till the elapfing of a year from the time at which the tutor of law had first a right to ferve. It is the king alone, as the father of his country, who gives tutors-dative, by his court of 40

Divorce,

[udicial

factor.

Who de-

curatory.

Law of the next of kin to the pupil, both by the father and mother, nor till the tutor give fecurity, recorded in the books of exchequer. There is no room for a tutor of law, or tutor-dative, while a tutor-nominate can be hoped for: and tutors of law, or dative, even after they have begun to act, may be excluded by the tutornominate, as foon as he offers to accept, unless he has expressly renounced the office. If a pupil be without tutors of any kind, the court of fession will, at the suit of any kinfman, name a factor (fleward) for the ma-

nagement of the pupil's effate. 6. After the years of pupillarity are over, the minor is confidered as capable of acting by himfelf, if he has confidence enough of his own capacity and pru-

Eurators, dence. The only two cases in which curators are imposed upon minors are, (1.) Where they are named by the father, in a state of health. (2.) Where the father is himself alive; for a father is ipso jure, without any fervice, administrator, that is, both tutor and curator of law, to his children, in relation to whatever effate may fall to them during their minority. This right in the father does not extend to grandchildren, nor to fuch even of his immediate children as are forisfamiliated. Neither has it place in subjects which are left by a stranger to the minor, exclusive of the father's administration. If the minor chooses to be under the direction of curators, he must raise and execute a fummons, citing at least two of his next of kin to appear before his own judge-ordinary, upon nine days warning (by act 1555.) At the day and place of appearance, he offers to the judge a lift of those whom he intends for his curators: fuch of them as refolve to undertake the office must sign their acceptance, and give caution; upon which an act of curatory is extracted. 7. These curators are fivled ad negotia; to diffinguish

them from another fort called curators ad lites, who are authorifed by the judge to concur with a pupil or minor in actions of law, either where he is without tutors and curators, or where his tutors and curators are parties to the fuit. This fort is not obliged to give caution, because they have no intermeddling with the minor's effate: they are appointed for a special purpose; and when that is over, their office is at an end. barred from Women are capable of being tutors and curators, under tutory and the following reftrictions: (1.) The office of a female tutor or curator falls by her marriage, even though the nomination should provide otherwise; for she is no longer fui juris, and incapable of course of having another under her power. (2.) No woman can be tutor of law. Papilts are (by act 1700) declared incapable of tutory or curatory. Where the minor has more tutors and curators than one, who are called in the nomination to the joint management, they must all concur in

every act of administration; where a certain number is

named for a quorum, that number must concur: where any one is named fine quo non, no act is valid without

that one's special concurrence. But if they are named

without any of these limitations, the concurrence of

the majority of the nominees then alive is sufficient. Mifference 8. In this, tutory differs from curatory, that as pubetween tupils are incapable of confent, they have no person casory and curatory. pable of acting; which defect the tutor fupplies : but a minor pubes can act for himfelf. Hence, the tutor

fubscribes alone all deeds of administration : but in cu- Law of ratory, it is the minor who fubfcribes as the proper Scotland party; the curator does no more than confent. Hence alfo, the persons of pupils are under the power either of their tutors or of their nearest cognates; but the minor, after pupillarity, has the disposal of his own perfon, and may refide where he pleafes. In most other particulars, the nature, the powers, and the duties of the two offices coincide. Both tutors and curators Judicial inmust, previous to their administration, make a judicial vento: ies inventory, subscribed by them and the next of kin, before the minor's judge-ordinary, of his whole eftate perfonal and real; of which, one subscribed duplicate is to be kept by the tutors or curators themselves; another, by the next of kin on the father's fide; and a third, by the next of kin on the mother's. If any eftate belonging to the minor shall afterwards come to their knowledge, they must add it to the inventory within two months after their attaining possession thereof. Should they neylect this, the minor's debtors are not obliged to make payment to them: they may be removed from their offices as suspected : and they are intitled to no allowance for the fums difburfed by them in the minor's affairs (act 1672), except the expence laid out upon the minor's entertainment, upon his lands and houses, and upon completing his titles.

9. Tutors and curators cannot grant leafes of the curators. minor's lands, to endure longer than their own office; nor under the former rental, without either a warrant from the court of fession, or some apparent necessity.

10. They have power to fell the minor's moveables: but cannot fell their pupil's land-effate, without the authority of a judge, yet this restraint reaches not to fuch alienations as the pupil could by law be compelled to grant, e. g. to renunciations of wadfets upon redemption by the reverser; for in such case, the very tenor of his own right lays him under the obligation; nor to the renewal of charters to heirs; but the charter must contain no new right in favour of the heir. The alienation, however, of heritage by a minor, with confent of his curators, is valid.

11. Tutors and curators cannot, contrary to the nature of their truft, authorife the minor to do any deed for their own benefit; nor can they acquire any debt affecting the minor's eftate: and, where a tutor or curator makes fuch acquifition, in his own name, for a less fum than the right is intitled to draw, the benefit thereof accrues to the minor. It feems, however, that fuch purchase would be considered as valid, provided it were bona fide acquired at a public fale; for in fuch case it occurs that the tutor or curator is in fact meliorating the fituation of his ward by enhancing the value of his property by a fair competition. In general, it feems to be the genius and spirit of our law, that tutors and curators shall do every thing in their power towards the faithful and proper discharge of their respective offices.

12. By the Roman law, tutory and curatory, being Their oblid munera publica, might be forced upon every one who gations. had not a relevant ground of excuse: but, with us, the persons named to these offices may either accept or decline: and where a father, in liege pouflie (when in a flate of health), names certain persons both as tutors. and curators to his children, though they have acted

Law of as tutors, they may decline the office of curatory. Tu-Scotland tors and curators having once accepted, are liable in diligence, that is, are accountable for the confequences of their neglect in any part of their duty from the time of their acceptance. They are accountable finguli in folidum, i. e. every one of them is answerable, not only for his own diligence, but for that of his co-tutors; and any one may be fued without citing the rest; but he who is condemned in the whole, has action of relief against his co-tutors.

13. From this obligation to diligence, we may except, (1.) Fathers or administrators in law, who, from the prefumption that they act to the best of their power for their children, are liable only for actual intromissions. (2.) Tutors and curators named by the father in confequence of the act 1696, with the special provifos, that they shall be liable barely for intromissions, not for omissions; and that each of them shall be liable only for himself, and not in solidum for the co-tutors : but this power of exemption from diligence is limited to the eftate descending from the father him. felf. Tutors or curators are not intitled to any falary or allowance for pains, unless a salary has been expressly contained in the testator's nomination; for their office is prefumed gratuitous.

14. Though no person is obliged to accept the office of tutor or curator; yet having once accepted, he cannot throw it up or renounce it without sufficient cause; but, if he should be guilty of misapplying the How tuto- minor's money, or fail in any other part of his duty, ry and cu- he may be removed at the fuit of the minor's next in ratory ex- kin, or by a co-tutor or co-curator. Where the mifconduct proceeds merely from indolence or inattention, the court, in place of removing the tutor, either

join a curator with him, or, if he be a tutor nominate,

they oblige him to give caution for his past and future management.

pire.

15. The offices of tutory and curatory expire also by the pupil's attaining the age of puberty, or the minor's attaining the age of 21 years complete; and by the death either of the minor, or of his tutor and curator. Curatory also expires by the marriage of a female minor, who becomes thereby under the coverture of her own husband. After expiry of the office, reciprocal actions lie at the instance both of the tutors and curators, and of the minor. That at the inflance of the minor is called actio tutela directa, by which he can compel the tutors to account ; that at the inflance of the tutors. actio tutele contraria, by which the minor can be compelled to repeat what has been profitably expended during the administration: but this last does not lie till after accounting to the minor; for till then the tutors are prefumed intus babere to have effects in their own hands for answering their disbursements.

16. Deeds either by pupils, or by minors having curators without their confent, are null; but they oblige the granters, in as far as relates to fums profitably applied to their use. A minor under curators can indeed make a testament by himself; but whatever is executed in the form of a deed inter vivos, requires the curator's confent. Deeds by a minor who has no curators, are as effectual as if he had had curators, and figned them with their confent; he may even alien his heritage, without the interpofition of a judge.

17. Minors may be restored against all deeds grant-Restitution.

ed in their minority, that are hurtful to them. Deeds, Law of in themselves void, need not the remedy of restitution; but where hurtful deeds are granted by a tutor in his pupil's affairs, or by a minor who has no curators, as these deeds subsist in law, restitution is necessary : and even where a minor, having curators, executes a deed hurtful to himfelf with their confent, he has not only action against the curators, but he has the benefit of reflitution against the deed itself. The minor cannot be reftored, if he does not raife and execute a fummons for reducing the deed, ex capite minorennitatis et lesionis, before he be 25 years old. These four years, between the age of 21 and 25, called quadriennium utile, are indulged to the minor, that he may have a reasonable time, from that period, when he is first prefumed to have the perfect use of his reason, to consider with himself what deeds done in his minority have been truly prejudicial to him.

18. Questions of restitution are proper to the court its requisof fession. Two things must be proved by the minor, fites. in order to the reduction of the deed: (1.) That he was minor when it was figned; (2.) That he is hurt or lesed by the deed. This lesion must not proceed merely from accident; for the privilege of relitution was not intended to exempt minors from the common misfortunes of life; it must be owing to the imprudence or negligence of the minor, or his curator.

19. A minor cannot be reftored against his own de-ciuded. lift or fraud; e.g. if he should induce one to bargain with him by faying he was major. (2.) Restitution is excluded, if the minor, at any time after majority, has approved of the deed, either by a formal ratification, or tacitly by payment of interest, or by other acts inferring approbation. (3.) A minor, who has taken himself to bufinels, as a merchant-shopkeeper, &c. cannot be restored against any deed granted by him in the course of that business, especially if he was proximus majorennitati at figning the deed. (4.) According to the more common opinion, a minor cannot be restored in a question against a minor, unless some gross unfairness shall be qualified in the bargain.

20. The privilege of reflicution does not always die How transwith the minor himself. (1.) If a minor succeeds to mitted to a minor, the time allowed for reftitution is governed by the minority of the heir, not of the ancestor. (2.) If a minor fucceeds to a major, who was not full zs, the privilege continues with the heir during his minority; but he cannot avail himself of the anni utiles, except in fo far as they were unexpired at the ancestor's death. (3.) If a major succeeds to a minor, he has only the quadriennium utile, after the minor's death; and if he fucceeds to a major dying within the quadriennium, no more of it can be profitable to him than what remained when the ancestor died.

21. No minor can be compelled to flate himfelf as Minor non defender in any action, whereby his basically of as tenetur play a defender, in any action, whereby his heritable estate citare. flowing from afcendants may be evicted from him, by one pretending a preferable right.

22. This privilege is intended merely to fave minois from the necessity of disputing upon questions of preference. It does not therefore take place, (1.) Where the action is purfued on the father's falsehood or delict. (2.) Upon his obligation to convey heritage. (3.) On his liquid bond for a fum of money, though fuch action should have the effect to carry off the minor's 40 2

Effect of

deeds by

minors.

Law of eftate by adjudication. (4.) Nor in actions purfued by a legal reftraint laid upon fuch perfons from figning Law of the minor's fuperior, upon feudal cafualties. (5.) This privilege cannot be pleaded in bar of an action which had been first brought against the father, and is only continued against the minor; nor where the father was not in the peaceable poffession of the heritable subject at his death. Before the minor can plead it, he must be ferved heir to his father. The persons of pupils are by faid act 1606 protected from imprisonment on ci-

Curators of idiots and furious per-Yous.

23. Curators are given, not only to minors, but in general to every one who, either through defect of judgment, or unfitness of disposition, is incapable of rightly managing his own affairs. Of the first fort, are idiots and furious persons. Idiots, or fatui, are entirely deprived of the faculty of reason. The diftemper of the furious person does not consist in the defect of reafon; but in an overheated imagination, which obflructs the application of reafon to the purposes of life. Curators may be also granted to lunatics; and even to persons dumb and deaf, though they are of found judgement, where it appears that they cannot exert it in the management of business. Every person, who is come of age, and is capable of acting rationally, has a natural right to conduct his own affairs. The only regular way, therefore, of appointing this fort of curators, is by a jury fummoned upon a brief from the chancery; which is not, like the brief of common tutory, directed to any judge ordinary, but to the judge of the fpecial territory where the person alleged to be fatuous or furious refides; that, if he is truly of found judgement, he may have an opportunity to oppofe it : and for this reason, he ought to be made a party to the brief. The curatory of idiots and furious perfons belongs to the nearest agnate; but a father is preferred to the curatory of his fatuous fon, and the husband to that of his fatuous wife, before the agnate.

24. A claufe is inferted in the brief, for inquiring how long the fatuous or furious person has been in that condition; and the verdict to be pronounced by the inquest has a retrospective effect; for it is declared a fufficient ground, without further evidence, for reducing all deeds granted after the period at which it appeared by the proof that the fatuity or furiofity began. But, as fatuous and furious perfons are, by their very flate, incapable of being obliged, all deeds done by them may be declared void, upon proper evidence of their fatuity at the time of figning, though they should never have been cognofced idiots by an inquest.

25. We have fome few inftances of the fovereign's giving curators to idiots, where the next agnate did not claim; but fuch gifts are truly deviations from our law, fince they pass without any inquiry into the state of the perfon upon whom the curatory is imposed. Hence the curator of law to an idiot, ferving quandocunque, is preferred, as foon as he offers himfelf, before the curator-dative. This fort of curatory does not determine by the lucid intervals of the person fub cura; but it expires by his death, or perfect return to a found judgement; which last ought regularly to be declared by the fentence of a judge.

26. Perfons, let them be ever so profuse, or liable to be imposed upon, if they have the exercise of reason, can effectually oblige themselves, till they are fettered by law. This may be done by Interdiction, which is

any deed to their own prejudice, without the confent Scotland; of their curators or interdictors.

27. There could be no interdiction, by our ancient practice, without a previous inquiry into the person's condition. But as there were few who could bear the shame that attends judicial interdiction, however neceffary the restraint might have been, voluntary interdiction has received the countenance of law; which is generally executed in the form of a bond, whereby the granter obliges himself to do no deed that may affect his estate, without the confent of certain friends therein mentioned. Though the reasons inductive of the bond fhould be but gently touched in the recital, the interdiction stands good. Voluntary interdiction, tho' it be imposed by the fole act of the person interdicted. cannot be recalled at his pleafure: but it may be taken off, (1.) By a fentence of the court of fession, declaring, either that there was, from the beginning, no fufficient ground for the restraint; or that the party is, fince the date of the bond, become rei fui providus. (2.) It falls, even without the authority of the lords, by the joint act of the perfon interdicted, and his interdictors, concurring to take it off. (3) Where the bond of interdiction requires a certain number as a quorum, the reftraint ceafes, if the interdictors shall by death be reduced to a leffer number.

28. Judicial interdiction is imposed by a fentence of the court of fession. It commonly proceeds on an action brought by a near kinfman to the party; and fometimes from the nobile officium of the court, when they perceive, during the pendency of a fuit, that any of the litigants is, from the facility of his temper, fubject to imposition. This fort must be taken off by the authority of the fame court that impofed it.

29. An interdiction need not be ferved against the Registrate perfon interdicted; but it must be executed, or pub-tion of inlished by a messenger, at the market cross of the ja-terdictions, rifdiction where he relides, by publicly reading the interdiction there, after three oyesses made for convocating the lieges. A copy of this execution must be affixed to the crofs; and thereafter, the interdiction, with its execution, must (by the act 1581) be registered in the books both of the jurisdiction where the person interdicted refides and where his lands lie, or (by the act 1600) in the general register of the fession, within 40 days from the publication. An interdiction, before it is registered, has no effect against third parties, tho they should be in the private knowledge of it; but it operates against the interdictors themselves, as foon as it is delivered to them.

30. An interdiction, duly registered, has this effect, Effects. that all deeds done thereafter, by the person interdicted, without the confent of his interdictors, affecting his heritable estate, are fubject to reduction. Registration in the general register fecures all las lands from alienation, wherever they lie; but where the interdiction is recorded in the register of a particular fhire, it covers no lands except those fituated in that shire. But perfons interdicted have full power to difpose of their moveables, not only by testament, but by prefent deeds of alienation : And creditors, in perfonal bonds granted after interdiction, may use all execution against their debtor's perfon and moveable estate : fuch bonds being only subject to reduction in fo far as di-

Interdiction.

Lawful

ehildren

31. All onerous or rational deeds granted by the person interdicted, are as effectual, even without the confent of the interdictors, as if the granter had been laid under no reftraint; but he cannot alter the fucceffrom of his heritable effate, by any fettlement, let it be ever fo rational. No deed, granted with confent of the interdictors, is reducible, though the ftrongest lefion or prejudice to the granter should appear: the only remedy competent, in fuch case, is an action by the granter against his interdictors, for making up to him office of in- what he has loft through their undue confent. It is no erdictors. part of the duty of interdictors, to receive fums or manage any effate; they are given merely ad audioritatem praflandam, to interpose their authority to reasonable deeds; and fo are accountable for nothing but their fraud or fault, in confenting to deeds hurtful to the person under their care.

32. The law concerning the state of children falls next to be explained. Children are either born in wedlock, or out of it. All children, born in lawful mairiage or wedlock, are prefumed to be begotten by the person to whom the mother is married; and confequently to be lawful children. This prefumption is fo ftrongly founded, that it cannot be defeated but by direct evidence that the mother's husband could not be the father of the child, e. g. where he is impotent, or was abfent from the wife till within fix lunar months of the birth. The canonifts indeed maintain, that the concurring testimony of the husband and wife, that the child was not procreated by the husband, is fufficient to elide this legal prefumption for legitimacy : but it is an agreed point, that no regard is to be paid to fuch testimony, if it be made after they have owned the child to be theirs. A father has the absolute right of disposing of his childrens person, of directing their education, and of moderate chastifement; and even after they become puberes, he may compel them to live in family with him, and to contribute their labour and industry, while they continue there, towards his service. A child who gets a separate stock from the father for carrying on any trade or employment, even though he should continue in the father's house, may be faid to be emancipated or forisfamiliated, in fo far as concerns that flock; for the profits arifing from it are his own. Forisfamiliation, when taken in this fenfe, is also inferred by the child's marriage, or by his living in a feparate house, with his father's permission or good-will. Children, after their full age of twenty-one years, become, according to the general opinion, their own maflers: and from that period are bound to the father only by the natural ties of duty, affection, and gratitude. The mutual obligations between parents and children to maintain each other, are explained afterwards, No claxiii. 4.

33. Children born out of wedlock, are flyled natural children, or bastards. Bastards may be legitimated or made lawful, (1.) By the subsequent intermarriage of the mother of the child with the sather. And this fort of legitimation intitles the child to all the rights of lawful children. The fubsequent marriage, which produces legitimation, is confidered by the law to have been entered into when the child legi-

timated was begotten; and hence, if he be a male, he Law of excludes, by his right of primogeniture, the fons procreated after the marriage, from the fuccession of the father's heritage, though these sons were lawful children from the birth. Hence, also, those children only can be thus legitimated, who are begotten of a woman whom the father might at that period have lawfully married. (2.) Bastards are legitimated by letters of legitimation from the fovereign. No clxxxii. 3.

34. As to the power of mafters over their fervants : Servant All fervants now enjoy the fame rights and privileges with other fubjects, unless in so far as they are tied down by their engagements of fervice. Servants are either necessary or voluntary. Necessary are those whom law obliges to work without wages, of whom immediately. Voluntary fervants engage without compulsion, either for mere subsistence, or also for wages. Those who earn their bread in this way, if they should stand off from engaging, may be compelled to it by the justices of the peace, who have power to fix the

rate of their wages.

35. Colliers, coal-bearers, falters, and other per-Colliers and fons necessary to collieries and falt-works, as they are faltersparticularly described by act 1661, were formerly tied down to perpetual fervice at the works to which they had once entered. Upon a fale of the works, the right of their fervice was transferred to the new proprietor-All perfons were prohibited to receive them into their fervice, without a testimonial from their last master; and if they deferted to another work, and were redemanded within a year thereafter, he who had received them was obliged to return them within twenty-four hours, under a penalty. But though the proprietor should neglect to require the deferter within the year, he did not, by that short prescription, lose his property in him. Colliers, &c. where the colliery to which they were restricted was either given up, or not sufficient for their maintenance, might lawfully engage with others; but' if that work should be again set a going, the proprietor might reclaim them back to it.

36. But by 15 Geo. III. c. 28. thefe restraints, the Restraints only remaining veftiges of flavery in the law of Scotland, ken off. are abrogated; and, after the 1st July 1775, all colliers, coal bearers, and falters, are declared to be upon the same footing with other fervants or labourers. The act subjects those who were bound prior to the 1st July-1775, to a certain number of years fervice for their freedom, according to the age of the perfon.

37. The poor make the lowest class or order of per. The poor. fons. Indigent children may be compelled to ferve any of the king's subjects without wages, till their age of thirty years. Vagrants and flurdy beggars may be also compelled to ferve any manufacturer. And because few persons were willing to receive them into their fervice, public work-houses are ordained to be built for fetting them to work. The poor who cannot work, must be maintained by the parishes in which they were born; and where the place of their nativity is not known, that burden falls upon the parishes where they have had their most common refort, for the three years immediately preceding their being apprehended or their applying for the public charity. Where the contributions collected at the churches to which they belong are not fufficient for their maintenance, they are

Baftards.

Law of to receive badges from the minister and kirk-fession, in virtue of which they may ask alms at the dwellinghouses of the inhabitants of the parish.

> CHAP. II. Of THINGS.

THE things, or fubjects, to which perfons have right, are the fecoud object of law.

SECT. I. Of the division of rights, and the several ways by which a right may be acquired.

Property.

THE right of enjoying and disposing of a subject at one's pleafure, is called property. Proprietors are restrained by law from using their property emulously to their neighbour's prejudice. Every flate or fovereign has a power over private property, called, by fome lawvers, dominium eminens, in virtue of which, the proprietor may be compelled to fell his property for an adequate price, where an evident utility on the part of the public demands it.

Things incapable of appropria-

Ways of

acquiring

property.

2. Certain things are by nature itself incapable of appropriation; as the air, the light, the ocean, &c.: none of which can be brought under the power of any one person, though their use be common to all. Others are by law exempted from private commerce, in respect of the uses to which they are destined. Of this last kind are, (1.) Res publica, as navigable rivers, highways, bridges, &c. : the right of which is vefted in the king, chiefly for the benefit of his people, and they are called regalia. (2.) Res universitatis, things which belong in property to a particular corporation or fociety, and whose use is common to every individual in it, but both property and use are subject to the repulations of the fociety; as town houses, corporation-halls, market-places, church-yards, &c. The lands or other revenue belonging to a corporation do not fall under this class, but are juris privati, quoad the corporation.

3. Property may be acquired, either by occupation or accoffion; and transferred by traditon or prefeription: but prescription being also a way of losing property, falls to be explained under a separate title. Oc-CUPATION, or occupancy, is the appropriating of things which have no owner, by apprehending them, or fei-zing their possession. This was the original method of acquiring property: and continued, under certain restrictions, the doctrine of the Roman law, Quod nullius est, fit occupantis : but it can have no room in the feudal plan, by which the king is looked on as the original proprietor of all the lands within his dominions.

4. Even in that fort of moveable goods which are prefumed to have once had an owner, this rule obtains by the law of Scotland, Quod nullius eft, fit domini regis. Thus, the right of treasure bid under ground is not acquired by occupation, but accrues to the king. Thus also, where one finds strayed cattle or other moveables, which have been loft by the former owner, the finder acquires no right in them, but must give public notice thereof; and if, within year and day after fuch notice, the proprietor does not claim his goods, they fall to the king, sheriff, or other person to whom the king has made a grant of fuch escheats.

5. In that fort of moveables which never had an Law of owner, as wild-beafts, fowls, fifthes, for pearls found on the shore, the original law takes place, that he who first apprehends, becomes proprietor; in fo much, that though the right of hunting, fowling, and fishing, be restrained by statute, under certain penalties, yet all game, even what is catched in contravention of the law, becomes the property of the catcher (unless where the confiscation thereof is made part of the penalty), the contravener being obnoxious, however, to the penal enactment of the statutes in consequence of his transgression. It was not for a long time a fixed point whether a person, though possessed of the valued rent by law intitling him to kill game, could hunt upon another person's grounds without consent: but it was lately found by the court of fession, and affirmed upon appeal, that he could not; it being repugnant to the idea of property, that any person, however qualified, should have it in his power to traverse and hunt upon another's grounds without confent of the proprietor. Although certain things become the property of the first occupant, yet there are others which fall not un-der this rule. Thus, whales thrown in or killed on our coafts, belong neither to those who kill them, nor to the proprietor of the grounds on which they are cast; but to the king, providing they are fo large as that they cannot be drawn by a wane with fix oxen.

6. Accession is that way of acquiring property, by Accession which, in two things which have a connection with or dependence on one another, the property of the principal thing draws after it the property of its accessory. Thus the owner of a cow becomes the owner of the calf; a house belongs to the owner of the ground on which it stands, though built with materials belonging to and at the charge of another; trees taking root in our ground, though planted by another, become ours. Thus also, the infensible addition made to one's ground by what a river washes from other grounds (which is called alluvio), accrues to the mafter of the ground which receives the addition: but where it happened that a large piece of ground was disjoined and annexed to another person's by the force of a river or any other accident. and which was by the Romans called avulsio. they confidered the owner's right of property, still to fublift, 6 21. Inft. de rer. divis; and it is probable that, in a fimilar case, our courts would countenance the diffinction. The Romans excepted from this rule the case of paintings drawn on another man's board or canvas, in confideration of the excellency of the art : which exception our practice has for a like reason ex-

tended to fimilar cases. 7. Under acceffion is comprehended Specification; Specification; by which is meant, a person's making a new species or tion. fubject, from materials belonging to another. Where the new species can be again reduced to the matter of which it was made, law confiders the former mass as ftill existing; and therefore, the new species, as an acceffory to the former subject, belongs to the proprietor of that fubject : but where the thing made cannot be fo reduced, as in the case of wine, which cannot be again turned into grapes, there is no place for the fidia juris; and therefore the workmanship draws after it

the property of the materials. But the person who

thus carries the property from the other is bound to

indemnify

Part III. Law of indemnify him according to the true value; and in through the creditor, in fo far as is necessary for sup- Law of case it was done mala fide, he may be made liable in the

pretium affectionis or utmost value.

Commisction.

8. Though the new species should be produced from the COMMIXTION or confusion of different substances belonging to different proprietors, the same rule holds; but where the mixture is made by the common confent of the owner, fuch confent makes the whole a common property, according to the shares that each proprietor had formerly in the feveral fubjects. Where things of the same fort are mixed without the confent of the proprietors, which cannot again be separated, e. g. two hogheads of wine, the whole likewife becomes a common property; but, in the after-division, regard ought to be had to the different quality of the wines: if the things fo mixed admit of a feparation, e. g. two flocks of sheep, the property continues di-

Cradition.

Q. Property is carried from one to another by TRA-DITION : which is the delivery of poffession by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requilite, in order to the transmitting of property in this way : 1. The intention or conlent of the former owner to transfer it on some proper title of alienation, as sale, exchange, gift, &c. (2.) The actual delivery in pur-fuance of that intention. The first is called the caufa, the other the modus transferendi dominii: which last is fo necessary to the acquiring of property, that he who gets the last right, with the first tradition, is preferred, according to the rule, Traditionibus, non nudis pactis, transferuntur rerum dominia.

10. Tradition is either real, where the ipfa corpora of moveables are put into the hands of the receiver; or fymbolical, which is used where the thing is incapable of real delivery, or even when actual delivery is only inconvenient. Where the possession or custody of the subject has been before with him to whom the property is to be transferred, there is no room for tradi-

Poffestion:

inatural,

11. Poffession, which is effential both to the acquifition and enjoyment of property, is defined, the detention of a thing, with a defign or animus in the detainer of holding it as his own. It cannot be acquired by the fole act of the mind, without real detention; but, being once acquired, it may be continued folo animo. Poffession is either natural, or civil. Natural possession is, when one possesses by himself : thus, we possess lands by cultivating them and reaping their fruits, houses by inhabiting them, moveables by detaining them in our wivil, and hands. Civil possession is our holding the thing, either by the fole act of the mind, or by the hands of another who holds it in our name: thus, the owner of a thing lent peffeffes it by the borrower; the proprietor of lands. by his tackfman, truffee, or fleward, &c. The fame fubject cannot be possessed entirely, or in solidum, by two different persons at one and the same time: and therefore possession by an act of the mind ceases, as foon as the natural possession is so taken up by another, that the former possession is not suffered to re-enter. Yet two perfons may, in the judgment of law, poffels the same subject, at the same time, on different rights: thus, in the case of a pledge, the creditor possesses it in his own name, in virtue of the right of inepignoration; while the proprietor is confidered as poffelling, in and

porting his right of property. The same doctrine holds, Scotland. in liferenters, tackfmen, and, generally, in every cafe where there are rights affecting a subject distinct from

the property. 12. A bona fide possessor is he who, though he is not bona fide. really proprietor of the subject, yet believes himself proprietor on probable grounds. A mala fide possessor is he who knows, or is prefumed to know, that what he poffeffes is the property of another. A possessor bona fide acquired right, by the Roman law, to the fruits of the subject possessed, that had been reaped and confumed by himfelf, while he believed the fubjects his own. By our customs, perception alone, without confumption, fecures the possession: nay, if he has fown the ground, while his bona fides continued, he is intitled to reap the crop, propter curam et culturam. But this doctrine does not reach to civil fruits, e g. the interest of money, which the bona fide receiver must restore, together

13. Bona fides necessarily ceaseth by the conscientia rei alienæ in the poffessor, whether such consciousness should proceed from legal interpellation, or private knowledge. Mala fides is fometimes induced by the true owner's bringing his action against the possessor, fometimes not till litiscontestation, and, in cases uncommouly favourable, not till fentence be pronounced a-

gainst the possessor.

with the principal, to the owner-

14. The property of moveable subjects is presumed Effects of by the bare act of possession, until the contrary be possession. proved; but possession of an immoveable subject, tho for a century of years together, if there is no feifin, does not create even a prefumptive right to it : Nulla Such subject is considered as caduciary, and fo accrues to the fovereign. Where the property of a fubject is contested, the lawful possessor is intitled to continue his possession, till the point of right be discossed; and, if he has lost it by force or flealth, the judge will, upon fummary application, immediately restore it to him.

15. Where a possessfor has several rights in his perfon, affecting the subject possessed, the general rule is, that he may ascribe his possession to which of them he pleafes; but one cannot afcribe his possession to a title other than that on which it commenced, in prejudice of him from whom his title flowed.

SECT. II. Of heritable and moveable rights.

For the better understanding the doctrine of this title, it must be known, that by the law of Scotland, and indeed of most nations of Europe since the introduction of feus, wherever there are two or more in the fame degree of confanguinity to one who dies intestate, and who are not all females, such rights belonging to the deceased as are either properly feudal, or have any refemblance to feudal rights, descend wholly to one of them, who is confidered as his proper heir; the others, who have the name of next of kin or executors, must be contented with that portion of the estate which is of a more perishable nature. Hence has arisen the division of rights to be explained under this title : the fubjects descending to the heir, are flyled beritable ; and those that fall to the next of kin moveable.

2. All rights of, or affecting lands, under which are

Scotland. Division of

heritable

comprehended houses, mills, fiftings, teinds; and all followed, may be affected at the fuit of creditors, either Law of rights of subjects that are fundo annexa, whether com- by adjudication, which is a diligence proper to heritage; pleted by seifin or not, are heritable ex sua natura. On or by arrestment, which is peculiar to moveables. Bonds the other hand, every thing that moves itself or can be feeluding executors, though they descend to the credirights into moved, and in general whatever is not united to land, tor's heir, are payable by the debtor's executors, withis moveable; as household furniture, corns, cattle, cash, out relief against the heir; fince the debtor's succession and move- arrears of rent and of interest, even though they should fion cannot be affected by the destination of the credibe due on a right of annualrent: for though the arrears tor. last mentioned are secured on land, vet being presently payable, they are confidered as cash.

3. Debts, (nomina debitorum), when due by bill, promiffory note, or account, are moveable. When conflituted by bond, they do not all fall under any one head; but are divided into heritable and moveable, by the following rules. All debts conflituted by bond bearing an obligation to infeft the creditor in any heritable fubject in fecurity of the principal fum and annualrent, or annualrent only, are heritable; for they not only carry a yearly profit, but are fecured upon

4. Bonds merely perfonal, though bearing a claufe of interest, are, by act 1661, declared to be moveable as to fuccession ; i. e. they go, not to the heir, but to the next of kin or executors; but they are heritable with respect to the fisk, and to the rights of husband and wife: that is, though, by the general rule, moveable rights fall under the communion of goods confequent upon marriage, and the moveables of denounced persons fall to the crown or fisk by single escheat, yet fuch bonds do neither, but are heritable in both re-Inects.

5. Bonds taken payable to heirs and assignees, secluding executors, are heritable in all respects, from the destination of the creditor. But a bond, which is made payable to heirs, without mention of executors, defrends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor; for the word heir, which is a generic term, points out him who is to fucceed by law in the right; and the executor, being the heir in mobilibus, is considered as the perfon to whom fuch bond is taken payable. But where a bond is taken to heirs-male, or to a feries of heirs, one after another, fuch bond is heritable, because its destination necessarily excludes executors.

gitable.

6. Subjects originally moveable become heritable, able rights (1.) By the proprietor's destination. Thus, a jewel, or become he- any other moveable subject, may be provided to the heir, from the right competent to every proprietor to fettle his property on whom he pleases. (2.) Moveable rights may become heritable, by the supervening of an heritable fecurity: Thus, a fum due by a perfonal bond becomes heritable, by the creditor's accepting an heritable right for fecuring it, or by adjudging upon it.

7. Heritable rights do not become moveable by acceffory moveable fecurities; the heritable right being in fuch case the jus nobilius, which draws the other af-

8. Certain subjects partake, in different respects, of partly heri- the nature both of heritable and moveable. Personal table, part-, bonds are, by the above cited act 1661, moveable in ly moverespect of succession; but heritable as to the fisk, and able. the rights of husband and wife. All bonds, whether merely perfonal, or even heritable, on which no feifin has Nº 177.

W.

o. All questions, whether a right be heritable or What perimoveable, must be determined according to the condi-od makes a tion of the subject at the time of the ancestor's death. ritable or If it was heritable at that period, it must belong to the moveable. heir; if moveable, it must fall to the executor, without regard to any alterations that may have affected the fubject in the intermediate period between the anceftor's death and the competition.

I. HERITABLE RIGHTS.

SECT. III. Of the constitution of heritable rights clxiv. by charter and feifin.

HERITABLE rights are governed by the feudal law, Origin of which owed its origin, or at leaft its first improvements, the seudal to the Longobards; whose kings, upon having penetrated into Italy, the better to preferve their conquests. made grants to their principal commanders of great part of the conquered provinces, to be again subdivided by them among the lower officers, under the conditions

2. The feudal conftitutions and usages were first reduced into writing about the year 1150, by two lawyers of Milan, under the title of Consuetudines Feudorum. None of the German emperors appear to have expressly confirmed this collection by their authority ; but it is generally agreed, that it had their tacit approbation, and was confidered as the customary feudal law of all the countries subject to the empire. No other country has ever acknowledged these books for their law; but each state has formed to itself such a system of feudal rules, as best agreed with the genius of its own conflitution. In feudal questions, therefore, we are governed, in the first place, by our own statutes and cuftoms; where thefe fail us, we have regard to the practice of neighbouring countries, if the genius of their law appears to be the fame with ours; and should the question still remain doubtful, we may have recourse to those written books of the feus, as to the

original plan on which all feudal fystems have pro-

of fidelity and military fervice.

3. This military grant got the name, first of benefi- Definition cium, and afterwards of feudum; and was defined a gra- of feus. tuitous right to the property of lands, made under the conditions of fealty and military fervice, to be performed to the granter by the receiver; the radical right of the lands still remaining in the granter. Under lands, in this definition, are comprehended all rights or fubjects fo connected with land, that they are deemed a part thereof; as houses, mills, fishings, jurisdictions, patronages, &c. Though feus in their original nature were gratuitous, they foon became the subject of commerce; fervices of a civil or religious kind were frequently substituted in place of military; and now, of a long time, fervices of every kind have been entirely dif-

penfed

Scotland

Law of penfed with in certain feudal tenures. He who makes the grant is called the Superior, and he who receives it the vaffal The subject of the grant is commonly calland vaffais ed the feu; though that word is at other times, in our law, used to fignify one particular tenure. (See Sect. iv. 2.). The interest retained by the superior in the feu is styled dominium diredum, or the superiority; and the interest acquired by the vasfal, dominium utile, or the property. The word fee is promiscuously applied to both.

Allodial goods.

4. Allodial goods are opposed to feus; by which are understood goods enjoyed by the owner, independent of a superior. All moveable goods are allodial: lands only are fo when they are given without the condition of fealty or homage. By the feudal fystem. the fovereign, who is the fountain of feudal rights, referves to himfelf the superiority of all the lands of which he makes the grant; To that, with us, no lands are allodial, except those of the king's own property. the fuperiorities which the king referves in the property-lands of his fubjects, and manfes and glebes, the right of which is completed by the presbytery's designation, without any feudal grant.

5. Every person who is in the right of an immove-Who can grantfeudal able subject, provided he has the free administration of his effate, and is not debarred by flatute, or by the nature of his right, may dispose of it to another. Nay, a vasfal, though he has only the dominium utile, can fubfeu his property to a fubvaffal by a fubaltern right, and thereby raise a new dominium diredum in himself, subordinate to that which is in his superior; and so in infinitum. The vassal who thus subseus is called the subvassal's immediate superior, and the vassal's fuperior is the fubvaffal's mediate fuperior.

Who can receive shem.

rights.

6. All persons who are not disabled by law, may acquire and enjoy feudal rights. Papifts cannot purchase a land estate by any voluntary deed. Aliens, who owe allegiance to a foreign prince, cannot hold a feudal right without naturalization; and therefore, where fuch privilege was intended to be given to favoured nations or persons, statutes of naturalization were necessary, either general or special; or at least, letters of naturalization by the fovereign.

What fubjedts can

7. Every heritable subject, capable of commerce, may be granted in feu. From this general rule are ex be granted cepted, 1. The annexed property of the crown, which is not alienable without a previous diffolution in parliament. 2. Tailzied lands, which are devifed under condition that they shall not be aliened. 3. An estate in hereditate jacente cannot be effectually aliened by the heir-apparent (i. e. not entered); but fuch alienation becomes effectual upon his entry, the fupervening right accruing in that case to the purchaser; which is a rule applicable to the alienation of all fubjects not belonging to the vender at the time of the fale.

Feudal charter-

8. The feudal right, or, as it is called, investiture, is constituted by charter and seisin. By the charter, we understand that writing which contains the grant of the feudal fubject to the vaffal, whether it be executed in the proper form of a charter, or of a disposition. Charters by fubject fuperiors are granted, either, 1. A me de superiore meo, when they are to be holden, not of the granter himfelf, but of his fuperior. This fort is called a public holding, because vasfals were

Vol. IX. Part II.

in ancient times publicly received in the fuperior's Law of court before the pares curia or co-vaffals. Or, 2. De Scotland. me, where the lands are to be holden of the granter. These were called sometimes base rights, from bas, lower: and fometimes private, because, before the establishment of our records, they were easily concealed from third parties; the nature of all which will be more fully explained, Sect. vii. An original charter is that by which the fee is first granted: A charter by progress is a renewed disposition of that fee to the heir or affignee of the vaffal. All doubtful claufes in charters by progress ought to be construed agreeably to the original grant; and all clauses in the original charter are understood to be implied in the charters by progress, if there be no express alteration.

Its confid-

9. The first clause in an original charter, which tuent parts. follows immediately after the name and defignation of the granter, is the narrative or recital, which expresses the causes inductive of the grant. If the grant be made for a valuable confideration, it is faid to be onerous; if for love and favour, gratuitous. In the difpositive clause of a charter, the subjects made over are described either by special boundaries or march stones. (which is called a bounding charter), or by fuch other characters 33 may sufficiently distinguish them. A charter regularly carries right to no subjects but what are contained in this clause, though they should be mentioned in fome other clause of the charter. It has been however found, that a right to falmon-fishing was carried by a clause cum piscariis in the tenendas of a charter, the fame having been followed with poffession.

10. The clause of tenendas (from its first words tenendas pradicias terras) expresses the particular tenure by which the lands are to be holden. The clause of reddendo (from the words reddendo inde annuatim) fpecifies the particular duty or fervice which the vaffal is

to pay or perform to the superior.

31. The clause of warrandice is that by which the Warrandice granter obliges himfelf that the right conveyed shall dicc. be effectual to the receiver. Warrandice is either perfonal or real. Personal warrandice, where the granter is only bound perfonally, is either, t. Simple, that he shall grant no deed in prejudice of the right; and this fort, which is confined to future deeds, is implied even in donations. 2. Warrandice from fact and deed. by which the granter warrants that the right neither has been, nor shall be, hurt by any fact of his. Or, 3. Absolute warrandice contra omnes mortales, whereby the right is warranted against all legal defects in it which may carry it off from the receiver either wholly or in part. Where a fale of lands proceeds upon an onerous cause, the granter is liable in absolute warrandice, though no warrandice be expressed; but in affignations to debts or decrees, no higher warrandice than from fact and deed is implied.

12. Gratuitous grants by the crown imply no warrandice; and though warrandice should be expressed, the clause is ineffectual, from a presumption that it has crept in by the negligence of the crown's officers. But where the crown makes a grant, not jure corone, but for an adequate price, the fovereign is in the fame

cafe with his fubjects.

13. Absolute warrandice, in case of eviction, affords Effects of an warrandice

Law of an action to the grantee against the granter, for ma-Scotland. king up to him all that he shall have suffered through the defect of the right; and not simply for his indemnification, by the granter's repayment of the price to him. But as warrandice is penal, and confequently frieli juris, it is not eafily prefumed, nor is it incurred from every light fervitude that may affect the fubject; far less does it extend to burdens which may affect the subject posterior to the grant, nor to those imposed by public statute, whether before or after, unless specially warranted against.

Real warrandice.

Excam-

hion.

feifin

14. Real warrandice is either, I. Express, whereby, in fecurity of the lands principally conveyed, other lands, called warrandice-lands, are also made over, to which the receiver may have recourfe in cafe the principal lands be evicted. Or, 2. Tacit, which is constituted by the exchange or excambion of one piece of ground with another; for, if the lands exchanged are carried off from either of the parties, the law itself, without any paction, gives that party immediate recourse upon his own first lands, given in exchange for

the lands evicted.

15. The charter concludes with a precept of feifin, Precept of which is the command of the fuperior granter of the right to his bailie, for giving feifin or possession to the vaffal, or his attorney, by delivering to him the proper fymbols. Any person, whose name may be inferted in the blank left in the precept for that purpofe, can execute the precept as bailie; and whoever has the precept of feifin in his hands, is prefumed to have a power of attorney from the vaffal for receiving

possession in his name.

16. A feifin is the instrument or attestation of a notary, that possession was actually given by the superior or his bailie, to the vaffal or his attorney; which is confidered as fo necessary a folemnity, as not to be suppliable, either by a proof of natural possession, or even of the fpecial fact that the vaffal was duly entered to the possession by the superior's bailie.

Symbols ufed in feifins.

of feifin.

17. The fymbols by which the delivery of poffeffion is expressed, are, for lands, earth, and stone; for rights of annualrent payable forth of land, it is also earth and stone with the addition of a penny money ; for parfonage teinds, a sheaf of corn; for jurisdictions, the book of the court; for patronages, a pfalm-book, and the keys of the church; for fishings, net and coble; for mills, clap and happer, &c. The feifin must be taken upon the ground of the lands, except where there is a special dispensation in the charter from the crown.

Registration of feifins.

18. All feifins must be registered within 60 days after their date, either in the general register of feifins at Edinburgh, or in the register of the particular shire appointed by the act 1617; which, it must be observed, is not, in every cafe, the shire within which the lands lie. Burgage seisins are ordained to be registered in the books of the borough.

19. Unregistered seifins are inessedual against third parties, but they are valid against the granters and their heirs. Seifins regularly recorded, are preferable, not according to their own dates, but the dates of

One feifin their registration.

ferves in 20. Seisin necessarily supposes a superior by whom it is given; the right therefore which the fovereign, who acknowledges no superior, has over the whole michts.

lands of Scotland, is conflituted jure corone without Law of feifin. In feveral parcels of land that lie contiguous to one another, one feifin ferves for all, unless the right of the feveral parcels be either holden of different fuperiors, or derived from different authors, or enjoyed by different tenures under the same superior. In difcontiguous lands, a separate seifin must be taken on every parcel, unless the fovereign has united them into one tenandry by a charter of union; in which cafe, if there is no special place expressed, a feisin taken on any part of the united lands will ferve for the whole, even though they be fituated in different shires. The only effect of union is, to give the discontiguous lands the fame quality as if they had been contiguous or naturally united; union, therefore, does not take off the necessity of feparate seifins, in lands holden by different tenures, or the rights of which flow from different fuperiors, these being incapable of natural union.

21. The privilege of barony carries a higher right Barony imthan union does, and confequently includes union in it plies union. as the leffer degree. This right of barony can neither be given, nor transmitted, unless by the crown; but the quality of fimple union, being once conferred on lands by the fovereign, may be communicated by the vaffal to a fubvaffal. 'Though part of the lands united or crected into a barony be fold by the vaffal to be holden a me, the whole union is not thereby diffolved:

what remains unfold retains the quality.

22. A charter, not perfected by feifin, is a right A charter merely perfonal, which does not transfer the property becomes (fee No claxiii. 1.); and a feifin of itself bears no real only faith without its warrant : It is the charter and feifin after feifin. joined together that conftitutes the feudal right, and fecures the receiver against the effect of all posterior feifins, even though the charters on which they pro-

ceed should be prior to his.

23. No quality which is defigned as a lien or real All burdens burden on a feudal right, can be effectual against fin. must be ingular fucceffors, if it be not inferted in the inveftiture. the invefti-If the creditors in the burden are not particularly men-ture. tioned, the burden is not real; for no perpetual unknown incumbrance can be created upon lands. Where the right itself is granted with the burden of the fum therein mentioned, or where it is declared void if the fum be not paid against a day certain, the burden is real; but where the receiver is fimply obliged by his acceptance to make payment, the clause is effectual only against him and his heirs.

SECT. IV. Of the several kinds of holding.

FEUDAL fubjects are chiefly diftinguished by their different manners of holding, which were either ward, blanch, feu, or burgage. Ward holding, (which is Ward-holdnow abolished by 20 Geo. II. c. 50.) was that which ing. was granted for military fervice. Its proper reddendo was, fervices, or fervices used and wont; by which laft was meant the performance of fervice whenever the fuperior's occasions required it. As all fendal rights were originally held by this tenure, ward-holding was in dubio prefumed. Hence, though the reddendo had contained fome fpecial fervice or yearly duty, the holding was prefumed ward, if another holding was not particularly expressed.

2. Few holding is that whereby the vaffal is obliged Feu-hold-

clxv

Lawf to pay to the superior a yearly rent in money or grain, Seotled. and fometimes also in services proper to a farm, as ploughing, reaping, carriages for the fuperior's ufe, &c. nomine feudi firme. This kind of tenure was introduced for the encouragement of agriculture, the improvement of which was confiderably obstructed by the vaffal's obligation to military fervice. It appears to have been a tenure known in Scotland as far back as

Blanch. holding.

leges burgorum. 3. Blanch-holding is that whereby the vaffal is to pay to the superior an elusory yearly duty, as a penny money, a rofe, a pair of gilt spurs, &c. merely in acknowledgment of the fuperiority, nomina alba firma. This duty, where it is a thing of yearly growth, if it be not demanded within the year, cannot be exacted thereafter; and where the words fi petatur tantum are fubioined to the reddendo, they imply a release to the vaffal, whatever the quality of the duty may be, if it is not asked within the year.

Burgage. holding.

4. Burgage-holding is that, by which boroughsroyal hold of the fovereign the lands which are contained in their charters of erection. This, in the opinion of Craig, does not conflitute a separate tenure, but is a species of ward-holding; with this specialty, that the vaffal is not a private person, but a community: and indeed, watching and warding, which is the pfual fervice contained in the reddendo of fuch charters, might be properly enough faid, some centuries ago, to have been of the military kind. As the royal borough is the king's vaffal, all burgage holders hold immediately of the crown: the magistrates, therefore, when they receive the refignations of the particular burgeffes, and give feifin to them, act, not as superiors, but as the king's bailies specially authorised

Mortifica-

clavi.

5. Feudal subjects, granted to churches, monasteries, or other focieties for religious or charitable uses, are faid to be mortified, or granted ad manum mortuam; either because all casualties must necessarily be loft to the fuperior, where the vaffal is a corporation, which never dies; or because the property of these fubjects is granted to a dead hand, which cannot transfer it to another. In lands mortified in times of Popery to the church, whether granted to prelates for the behoof of the church, or in puram eleemofynam; the only fervices prestable by the vasfals were prayers, and finging of maffes for the fouls of the deceafed, which approaches nearer to blanch-holding than ward. The purposes of such grants having been, upon the reformation, declared fuperfittious, the lands mortified were annexed to the crown; but mortifications to univerfities, hospitals, &c. were not affected by that annexation; and lands may, at this day, be mortified to any lawful purpose, either by blanch or by feu holding. But as the fuperior must lose all the casualties of superiority in the case of mortifications to churches, univerfities, &c. which being confidered as a corporation, never dies; therefore lands cannot be mortified without the fuperior's confent. Craig, lib. 1. dieg. 11,

SECT. V. Of the cafualties due to the superior.

THE right of the fuperior continues unimpaired, of speri- notwithstanding the seudal grant, unless in so far as ority.

the dominium utile, or property, is conveyed to his Law of vaffal. The fuperiority carries a right to the fervices Scotland, and annual duties contained in the reddendo of the vaffal's charter. The duty payable by the vaffal is a debitum fundi, i, e. it is recoverable, not only by a perfonal action against himself, but by a real action a. gainst the lands.

2. Befides the constant fixed rights of Superiority, Cafual there are others, which, because they depend upon un-rights.

certain events, are called cafualties.

3. The cafualties proper to a ward-holding, while Ward-holdthat tenure fublished, were quard, recognition, and ing. marriage, which it is now unnecessary to explain, as by the late flatutes 20 and 25 Geo. II. for abolishing ward-holdings, the tenure of the lands holden ward of the crown or prince is turned into blanch, for payment of one penny Scots yearly, si petatur tantum; and the tenure of those holden of subjects into fou, for payment of fuch yearly feu-duty in money, victual, or cattle, in place of all fervices, as should be fixed by the court of fession. And accordingly that court, by act of federunt Feb. 8. 1749, laid down rules for afcertaining the extent of these seu-duties. A full history of their casualties, and of the effects consequent upon their falling to the fuperior, will be found in Erskine's large Institute, B. 2. T. 5. § 5. et fequen ; to which the reader is referred.

4. The only cafualty, or rather forfciture, proper Feu-holdto feu-holding, is the lofs or tinfel of the feu-right, ing, by the neglect of payment of the feu duty for two full years. Yet where there is no conventional irritancy in the few-right, the vaffal is allowed to purge the legal irritancy at the bar ; that is, he may prevent the forfeiture, by making payment before fentence : but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unless where he can give a good

reason for the delay of payment.

5. The casualties common to all holdings are, Non-entry, non-entry, relief, liferent escheat, disclamation, and purpresture. NON-ENTRY is that casualty which arises to the superior out of the rents of the feudal subject. through the heir's neglecting to renew the investiture after his ancestor's death. The superior is intitled to this cafualty, not only where the heir has not obtained himself infest, but where his retour or infestment is fet afide upon nullities. The heir, from the death of the ancestor, till he be cited by the superior in a procefs of general declarator of non-entry, lofes only the retoured duties of his lands, (fee next parag.); and he forfeited thefe, though his delay should not argue any contempt of the superior, because the casualty is confidered to fall, as a condition implied in the feudal right, and not as a penalty of transgression; but reafonable excuses are now admitted to liberate even from the retoured duties before citation.

6. For understanding the nature of retoured duties, Retoured it must be known, that there was anciently a general duties. valuation of all the lands in Scotland, defigned both for regulating the proportion of public fubfidies, and for afcertaining the quantity of non-entry and reliefduties payable to the superior; which appears, by a contract between K. R. Bruce and his fubjects anno 1327, preferred in the library of the Faculty of Advocates, to have been fettled at least as far back as the reign of Alexander III. This valuation became in the 4 P 2 courfe

Old and

new ex-

Valued

rent.

tents.

Law of course of time, by the improvement of agriculture, and perhaps also by the heightening of the nominal value of our money, from the reign of Robert I. downwards to that of James III. much too low a standard for the fuperior's cafualties: wherefore, in all fervices of heirs, the inquest came at last to take proof likewise of the prefent value of the lands contained in the brief (quantum nunc valent), in order to fix these casualties. The first was called the old, and the other the new, extent. Though both extents were ordained to be specified in all retours made to the chancery upon brieves of inqueft; yet by the appellation of retoured duties in a question concerning casualties, the new extent is always understood. The old extent continued the rule for lewying public fubfidies, till a tax was imposed by new proportions, by feveral acts made during the usurpation. By two acts of Cromwell's parliament, held at Westminster in 1656, imposing taxations on Scotland, the rates laid upon the feveral counties are precifely fixed. The fubfidy granted by the act of convention 1667 was levied on the feveral counties, nearly in the fame

> that should be settled by the commissioners appointed to carry that act into execution. The rent fixed by these valuations is commonly called the valued rent; according to which the land tax, and most of the other public burdens, have been levied fince that time. 7. In feu-holdings, the feu-duty is retoured as the

proportions that were fixed by the usurper in 1656;

and the fums to which each county was fubjected were

fubdivided among the individual landholders in that

county, according to the valuations already fettled, or

rent, because the feu-duty is presumed to be, and truly was at first, the rent. The superior therefore of a feuholding gets no non-entry, before citation in the general declarator; for he would have been intitled to the yearly feu-duty, though the fee had been full, i. e. though there had been a vaffal infeft in the lands. The fuperior of teinds gets the fifth part of the retoured duty as non-entry, because the law confiders teinds to be worth a fifth part of the rent. In rights of annualrent which are holden of the granter, the annualrenter becomes his debtor's vaffal; and the annualrent contained in the right is retoured to the blanch or other duty

contained in the right before declarator.

8. It is because the retoured duty is the presumed rent, that the non-entry is governed by it. If therefore no retour of the lands in non-entry can be produced, nor any evidence brought of the retoured duty, the fuperior is intitled to the real, or at least to the valued, rent, even before citation. In lands formerly holden ward of the King, the heir, in place of the retoured duties, is subjected only to the annual payment of one per cent. of the valued rent.

Q. The heir, after he is cited by the superior in the action of general declarator, is subjected to the full rents till his entry, because his neglect is less excusable after citation. The decree of declarator, proceeding on this action, intitles the superior to the possession, and gives him right to the rents downward from the citation. As this fort of non-entry is properly penal, our law has always restricted it to the retoured duties, if the heir had a probable excuse for not entering.

10. Non entry does not obtain in burgage holdings, In what cafes non- because the incorporation of inhabitants holds the entry is not whole incorporated subjects of the King; and there due.

can be no non-entry due in lands granted to communi- hw of ties, because there the vaffal never dies. This covers the Sotland. right of particulars from non-entry: for if non-entry be excluded with regard to the whole, it cannot obtain with regard to any part. It is also excluded, as to a third of the lands, by the terce, during the widow's life; and as to the whole of them, by the courtefy during the life of the hufband. But it is not excluded by a precept of feifin granted to the heir till feifin be taken thereupon.

II. RELIEF is that cafualty which intitles the fune. Relief. rior to an acknowledgment or confideration from the heir for receiving him as vaffal. It is called relief. because, by the entry of the heir, his fee is relieved out of the hands of the superior. It is not due in feu-holdings flowing from fubjects, unless where it is expressed in the charter by a special clause for doubling the feuduty at the entry of an heir; but, in feu-rights holden of the crown, it is due, though there should be no such clause in the charter. The superior can recover this cafualty, either by a poinding of the ground, as a debitum fundi, or by a personal action against the heir. In blanch and feu holdings, where this cafualty is expressly flipulated, a year's blanch or feu duty is due in name of relief, befide the current year's duty payable in name of blanch or feu farm.

12. ESCHEAT (from escheoir, to happen or fall) is that Escheat. forfeiture which falls through a person's being denounced rebel. It is either fingle or liferent. Single efcheat, though it does not accrue to the superior, must be explained in this place, because of its coincidence

with liferent.

13. After a debt is conflituted, either by a formal Letters of decree, or by registration of the ground of debt, which horning. to the special effect of execution, is in law accounted a decree; the creditor may obtain letters of horning, iffuing from the fignet, commanding messengers to charge the debtor to pay or perform his obligation, within a day certain. Where horning proceeds on aformal decree of the fession, the time "dulged by law to the debtor is fifteen days; if upon a decree of the commission of teinds or admiral, it is ten; and upon the decrees of all inferior judges, fifteen days. Where it proceeds on a registered obligation, which specifies the number of days, that number must be the rule; and, if no precise number be mentioned, the charge must be given in fifteen days, which is the term of law, unless where special statute interposes; as in bills, upon which the debtor may be charged on fix days.

14. The messenger must execute these letters (and indeed all fummonfes) against the debtor, either perfonally or at his dwelling-house; and, if he get not access to the house, he must strike fix knocks at the gate, and thereafter affix to it a copy of his execution. If payment be not made within the days mentioned in the horning, the messenger, after proclaiming three oyesses at the market-cross of the head borough of the debtor's domicile, and reading the letters there, blows three blafts with a horn, by which the debtor is understood to be proclaimed rebel to the king for contempt of his authority; after which, he must affix a copy of the execution to the market-cross: This is called the publication of the diligence, or a denunciation Denunciat the horn. Where the debtor is not in Scotland, he tion. must be charged on fixty days, and denounced at the

Law of market-crofs of Edinburgh, and pier and shore of Scotland. Jeith.

15. Denunciation, if registered within 15 days, ei-Confequential for the fleriff's books, or in the general register, drew after it the rebel's fingle escheat, i. e. the forfeiture of his moveables to the crown. Perfons denounced rebels have not a persona slandi in judicio; they can neither fue nor defend in any action. But this incapacity being unfavourable, is perfonal to the rebel, and cannot be pleaded against his affignee.

16. Perfons cited to the court of jufficiary may be Denunciaion in cri- also denounced rebels, either for appearing there with uinal cases, too great a number of attendants: or, if they fail to appear, they are declared fugitives from the law. Single escheat falls, without denunciation, upon sentence of death pronounced in any criminal trial; and, by special statute, upon one's being convicted of certain crimes, though not capital; as perjury, bigamy, deforcement, breach of arrestment, and usury. By the late act abolishing ward holdings, the cafualties both of fingle and liferent escheat are discharged, when proceeding upon denunciation for civil debts; but they still continue, when they arise from criminal causes. All moveables belonging to the rebel at the time of his rebellion, (whether proceeding upon denunciation, or fentence in a criminal trial), and all that shall be afterwards acquired by him until relaxation, fall under fingle escheat. Bonds bearing interest, because they continue heritable quoad fifcum, fall not under it, nor fuch fruits of heritable fubicets as became due after the term next enfu-

> 17. The king never retains the right of escheat to himself, but makes it over to a donatory, whose gift is not perfected, till, upon an action of general declarator, it be declared that the rebel's escheat has fallen to the crown by his denunciation, and that the right of it is now transerred to the pursuer by the gift in his favour. Every creditor therefore of the rebel, whose debt was contracted before rebellion, and who has used diligence before declarator, is preferable to the donatory. But the escheat cannot be affected by any debt contracted, nor by any voluntary deed of the rebel after

ing the rebellion, these being reserved for the liferent

rebellion.

Liferent

cfcheat.

Letters of 18. The rebel, if he either pays the debt charged relaxation. for, or fuspends the diligence, may procure letters of relaxation from the horn, which, if published in the fame place, and registered 15 days thereafter in the fame register with the denunciation, have the effect to restore him to his former state; but they have no retrofpect as to the moveables already fallen under efcheat, without a special clause for that purpose.

19. The rebel, if he continues unrelaxed for year and day after rebellion, is construed to be civilly dead: and therefore, where he holds any feudal right, his fuperiors, as being without a vaffal, are intitled, each of them, to the rents of fuch of the lands belonging to the rebel as hold of himself, during all the days of the rebel's natural life, by the cafualty of LIFERENT ES-CHEAT; except where the denunciation proceeds upon treason or proper rebellion, in which case the liferent falls to the king.

20. It is that estate only, to which the rebel has a proper right of liferent in his own person, that falls un-

der his liferent escheat,

21. Though neither the superior nor his donatory Law of can enter into possession in consequence of this casualty, till decree of declarator; yet that decree, being truly declaratory, has a retrospect, and does not so properly confer a new right, as declare the right formerly constituted to the superior, by the civil death of his vassal. Hence, all charters or heritable bonds, though granted prior to the rebellion, and all adjudications, though led upon debts contracted before that period, are ineffectual against the liferent escheat, unless seifin be taken thereon within year and day after the granter's rebel-

22. Here, as in fingle escheat, no debt contracted after rebellion can hurt the donatory, nor any voluntary right granted after that period, though in fecurity

or fatisfaction of prior debts.

23. DISCLAMATION is that cafualty whereby a vaf-Difclama fal forfeits his whole feu to his fuperior, if he difowns tion. or disclaims him, without ground, as to any part of it. PURPRESTURE draws likewise a forfeiture of the whole Purpresfeu after it ; and is incurred by the vaffal's encroaching ture. upon any part of his fuperior's property, or attempting by building, inclosing, or otherwise, to make it his own. In both thefe feudal delinquencies, the leaft co-

lour of excuse faves the vasfal.

24. All grants from the crown, whether charters, Signatures gifts of cafualties, or others, proceed on fignatures which pass the fignet. When the king refided in Scotland, all fignatures were fuperferibed by him; but, on the accession of James VI. to the crown of England, a cachet or feal was made, having the king's name engraved on it, in pursuance of an act of the privy-council, April 4. 1603. with which all fignatures were to be afterwards fealed, that the lords of exchequer were impowered to pass; and these powers are transferred to the court of exchequer, which was established in Scotland after the union of the two kingdoms in 1707. Grants of higher confequence, as remissions of crimes. gifts proceeding upon forfeiture, and charters of novodamus, must have the king's fign manual for their war-

25. If lands holding of the crown were to be con-Sealeveyed, the charter passed, before the union of the kingdoms in 1707, by the great feal of Scotland; and now by a feal substitute in place thereof. Grants of church dignities, during episcopacy, passed also by the great feal; and the commissions to all the principal officers of the crown, as Juffice-Clerk, King's Advocate, Solicitor, &c. do fo at this day. All rights which fubjects may transmit by simple assignation, the king transmits by the privy feal: as gifts of moveables, or of casualties that require no seisin. The quarter seal, otherwise called the testimonial of the great seal, is anpended to gifts of tutory, commissions of brieves iffuing from the chancery, and letters of presentation to lands holding of a subject, proceeding upon forfeiture, baflardy, or ultimus hares.

26. Seals are to royal grants what subscription is Their uses to rights derived from subjects, and give them authority; they ferve also as a check to gifts procured (fubreptione vel obreptione) by concealing the truth, or expressing a falsehood; for, where this appears, the gift may be stopped before passing the feals, though the fignature should have been figned by the king. All rights passing under the great or privy feal must be registered

Law of in the registers of the great or privy feal respective, be-Scotland, fore appending the feal.

SECT. VI. Of the right which the vaffal acquires by getting the feu.

Dominium wille.

UNDER the dominium utile which the vaffal acquires by the feudal right, is comprehended the property of whatever is confidered as part of the lands, whether of houses, woods, inclosures, &c. above ground; or of coal, limestone, minerals, &c. under ground. Mills have, by the generality of our lawyers, been deemed a separate tenement, and so not carried by a charter or disposition, without either a special clause conveying mills, or the erection of the lands into a barony. Yet it is certain, that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour, without mentioning it, although the lands are not erected into a barony. If the lands disponed be attricted, or thirled to another mill, the purchaser is not allowed to build a new corn-mill on his property, even though he should offer security that it shall not hurt the thirle; which is introduced for preventing daily temptations to fraud.

2. Proprietors are prohibited to hold dove-cotes, unless their yearly rent, lying within two miles thereof, extend to ten chalders of victual. A purchaser of lands, with a dove-cote, is not obliged to pull it down, though he should not be qualified to build one; but, if it becomes ruinous, he cannot rebuild it. The right of brewing, though not expressed in the grant, is implied in the nature of property; as are also the rights of fishing, fowling, and hunting, in so far as they are

not restrained by statute.

3. There are certain rights naturally confequent on property, which are deemed to be preferved by the crown as regalia; unless they be specially conveyed. Gold and filver mines are of this fort; the first univerfally; and the other, where three half-pennies of filver can be extracted from the pound of lead, by act 1424, (three half-pennies at that time was equal to about two shillings five pennies of our present Scots money). These were by our ancient law annexed to the crown; but they are now diffolved from it; and every proprietor is intitled to a grant of the mines within his own lands, with the burden of delivering to the crown a tenth of what shall be brought up.

4. Salmon-fishing is likewife a right understood to be referved by the crown, if it be not expressly granted: but 40 years possession thereof, where the lands are either crected into a barony, or granted with the general clause of fishings, establishes the full right of the falmon fishing in the vasfal. A charter of lands, within which any of the king's forests lie, does not carry the

property of fuch forest to the vasial.

Res publica.

Regalia.

5. All the fubjects which were by the Roman law accounted res publica, as rivers, highways, ports, &c. are, fince the introduction of feus, held to be inter regalia, or in patrimonio principis; and hence encroachment upon a highway is faid to infer purpresture. No person has the right of a free port without a special grant, which implies a power in the grantee to levy anchorage and shore dues, and an obligation upon him to uphold the port in good condition. In this class of things, our forefathers reckoned fortalices, or fmall

places of firength, originally built for the defence of the country, either against foreign invasions or civ Scotland commotions; but these now pass with the lands it every charter.

Part III

6. The vaffal acquires right by his grant, not only lertinents to the lands specially contained in the charter, but to those that have been possessed 40 years as pertinent thereof. But, 1. If the lands in the grant are marked out by special limits, the vassal is circumscribed by the tenor of his own right, which excludes every subject without these limits from being pertinent of the lands. 2. A right possessed under an express infestment is preferable, cateris paribus, to one possessed only as pertinent. 3. Where neither party is infeft per expressum, the mutual promifcuous possession by both, of a subject as pertinent, refolves into a commonty of the fubiect poffessed: but if one of the parties has exercised all the acts of property of which the fubject was capable, while the possession of the other was confined to pasturage only, or to casting feal and divot, the first is to be deemed fole proprietor, and the other to have merely a right of fervitude.

7. As barony is a nomen universitatis, and unites privileges the feveral parts contained in it into one individual of barony right, the general conveyance of a barony carries with it all the different tenements of which it confilts, tho' they should not be specially enumerated (and this holds, even without erection into a barony, in lands that have been united under a special name). Hence, likewife, the poffession by the vassal of the smallest part

of the barony-lands preferves to him the right of the whole.

8. The vaffal is intitled, in confequence of his property, to levy the rents of his own lands, and to recover them from his tenants by an action for rent before his own court; and from all other possessors and intromitters, by an action of mails and duties before the theriff. He can also remove from his lands, tenants who have no leafes; and he can grant tacks or leafes Tack or to others. A tack is a contract of location, whereby leafe. the use of land, or any other immoveable subject, is set to the leffee or tacksman for a certain yearly rent, either in money, the fruits of the ground, or fervices. It ought to be reduced into writing, as it is a right concerning lands; tacks, therefore, that are given verbally, to endure for a term of years, are good against neither party for more than one year. An obligation to grant a tack is as effectual against the granter as a formal tack. A liferenter, having a temporary property in the fruits, may grant tacks to endure for the term of his own liferent.

o. The tack (man's right is limited to the fruits which fpring up annually from the fubject fet, either naturally, or by his own industry; he is not therefore intitled to any of the growing timber above ground, and far less to the minerals, coal, clay, &c. under ground, the use of which confumes the subflance. Tacks are, like other contracts, personal rights in their own nature; and confequently ineffectual against fingular successors in the lands; but, for the encouragement of agriculture, they were, by act 1449, declared effectual to the tackiman for the full time of their endurance, into whose hands soever the lands

10. To give a written tack the benefit of this statute,

acks are

it must mention the special tack-duty payable to the proprietor, which though fmall, if it be not elufory, fecures the tacksman; and it must be followed by posfession, which supplies the want of a feisin. If a tack does not express the term of entry, the entry will commence at the next term after its date, agreeable to the rule, Quod pure debetur, prasenti die debetur. If it does not mention the ish, i. e. the term at which it is to determine, it is good for one year only; but, if the intention of parties to continue it for more than one year, should appear from any clause in the tack (e. g. if the tacksman should be bound to certain annual preftations), it is fultained for two years as the minimum. Tacks granted to perpetuity, or with an indefinite ish, have not the benefit of the statute. Tacks of houses within borough do not fall within this act, it being customary to let these from year to year.

II Tacks necessarily imply a delectus persona, a choice by the fetter of a proper person for his tenant. Hence icti juris. the conveyance of a tack which is not granted to affignees, is ineffectual without the landlord's confent. A right of tack, though it be heritable, falls under the jus mariti, because it cannot be separated from the labouring cattle and implements of tillage, which are moveable subjects. A tack, therefore, granted to a fingle woman, without the liberty of affigning, falls by her marriage; because the marriage, which is a legal conveyance thereof to the husband, cannot be annulled. This implied exclusion of assignees is, however, limited to voluntary, and does not extend to necessary, asfignments; as an adjudication of a tack by the tackfman's creditor: but a tack, expressly excluding affignees, cannot be carried even by adjudication. It was not a fixed point for a long time, whether a tenant could fubfet without confent of the landlord; but the court of fession, in a case which occurred a few years ago, denied the power of fubfetting in the tenant. Liferent tacks, because they import a higher degree of right in the tacksman than tacks for a definite term. may be affigued, unless affiguees be specially excluded,

> 12. If neither the fetter nor tackfman shall properly discover their intention to have the tack dissolved at the term fixed for its expiration, they are underflood, or prefumed, to have entered into a new tack upon the fame terms with the former, which is called tacit relocation; and continues till the landlord warns the tenant to remove, or the tenant renounces his tack to the landlord: this obtains also in the case of moveable tenants, who possess from year to year without written tacks. In judicial tacks, however, by the court of fession, tacit relocation neither does nor can take place: for cautioners being interpoled to these, they are loofed at the end of the tack : and therefore, where judicial tacksmen possess after expiry of their right, they are

accountable as factors.

nanted betwixt the parties.

13. In tacks of land, the fetter is commonly bound to put all the houfes and office-houfes, necessary for the farm, in good condition at the tenant's entry; and the tcnant must keep them and leave them fo at his removal. But, in tacks of houses, the setter must not only deliver to the tenant the subject fet, in tenantable repair at his entry, but uphold it in that repair during the whole years of the tack, unless it is otherwise cove-

14. If the inclemency of the weather, inundation, Law of or calamity of war, should have brought upon the crop Scotland. an extraordinary damage (plus quam tolerabile), the landlord had, by the Roman law, no claim for any part of the tack-duty: if the damage was more moderate, he might exact the full rent. It is nowhere defined. what degree of sterility or devastation makes a loss plus quam tolerabile; but the general rule of the Roman law feems to be made ours. Tenants are not obliged to pay any public burdens to which they are not expressly bound by their tack, except mill-fervices.

15. Tacks may be evacuated during their currency, Delitation (1.) In the same manner as feu-rights, by the tacks. man's running in arrear of his tack-duty for two years together. This irritancy may be prevented by the tenant's making payment at the bar before fentence. (2.) Where the tenant either runs in arrear of one year's rent, or leaves his farm uncultivated at the usual feafon; in which case he may, by act of sederunt 1756, be ordained to give fecurity for the arrears, and for the rent of the five following crops, if the tack shall subfift fo long; otherwise, to remove, as if the tack were at an end. (3.) Tacks may be evacuated at any time by

the mutual confent of parties.

16. The landlord, when he intends to remove a tenant whose tack is expiring, or who possesses without a tack, must, upon a precept figned by himself, warn the tenant forty days preceding the term of Whitfunday, at or immediately preceding the ifh, perforally, Warnings, or at his dwelling-house, to remove at that term, with his family and effects. This precept must be also executed on the ground of the lands, and thereafter read in the parish-church where the lands lie, after the morning fervice, and affixed to the most patent door thereof. Whitfunday, though it be a moveable feaft, is, in queflions of removing, fixed to the 15th of May. In warnings from tenements within borough, it is sufficient that the tenant be warned forty days before the ish of the tack, whether it be Whitfunday or Martinmas; and in thefe the ceremony of chalking the door is fuftained as warning, when proceeding upon a verbal order from the proprietor.

17. This process of warning was precisely necessary for founding an action of removing against tenants, till the act of federunt 1756, which leaves it in the option of the proprietor, either to use the former method, or to bring his action of removing before the judge-ordinary; which, if it be called 40 days before the faid termof Whitfunday, shall be held as equal to a warning. Where the tenant is bound, by an express clause of his tack, to remove at the ifh without warning, fuch obligation is, by the faid act, declared to be a fufficient warrant for letters of horning, upon which, if the landlord charge his tenant forty days before the faid Whitfunday, the judge is authorifed to eject him within fix days after the term of removing expressed in the tack.

18. Actions of removing might, even before this act of federunt, have been purfued without any previous warning (1.) Against vicious possessors, i. e. persons Actions of who had feized the possession by force, or who, without removing any legal title, had intruded into it, after the last poffessor had given it up. (2.) Against possessors who had a naked tolerance. (3.) Against tenants who had run

Law of in arrear of rent, during the currency of their tacks. Scotland. (4.) Against such as had fold their lands, and yet continued to possess after the term of the purchaser's entry. Upon the fame ground, warning was not required, in removings against possessors of liferented lands, after the death of the liferenter who died in the natural poffession; but if he possessed by tenants, these tenants could not be diffurbed in their poffessions till the next Whitfunday, that they might have time to look out for other farms; but they might be compelled to remove at that term, by an action of removing, without warn-

> 10. A landlord's title in a removing, let it be ever fo lame, cannot be brought under question by a tenant whose tack flows immediately from him; but, if he is to infift against tenants not his own, his right must be perfected by infestment, unless it be such as requires no

infeftment : as terce, &c.

20. The defender, in a removing, must (by act 1555), before offering any defence which is not instantly verified, give fecurity to pay to the fetter the violent profits, if they should be awarded against him. These are so called, because the law confiders the tenant's possession after the warning as violent. They are estimated, in tenements within borough, to double the rent; and in lands, to the highest profits the pursuer could have made of them, by possessing them either by a tenant or by himfelf.

Effect of

Violent profits.

21. If the action of removing shall be passed from, warning or if the landlord shall, after using warning, not insided rent from the tenant, for any term subsequent to that of the removal, he is prefumed to have changed his mind, and tacit relocation takes place. All actions of removing against the principal or original tacksman, and decrees thereupon, if the order be used, which is fet forth fupra (17.), are, by the act of federunt 1756, declared to be effectual against the assignees to the tack

Hypothec.

22. The landlord has, in fecurity of his tack-duty, over and above the tenant's personal obligation, a tacit pledge or hypothec, not only on the fruits, but on the cattle pasturing on the ground. The corn, and other fruits, are hypothecated for the rent of that year whereof they are the crop; for which they remain affected, though the landlord should not use his right for years together. In virtue of this hypothec, the landlord is intitled to a preference over any creditor, though he has actually used a poinding; except in the special case, that the poinding is executed after the term of payment, when the landlord can appropriate the crop for his payment, the poinder in fuch case being obliged to leave as much on the ground as to fatisfy the land. lord's hypothec: and it has been lately found, that this right of the landlord is preferable even to a debt due to the crown, for which a writ of extent had been iffued: but the case here alluded to is presently under appeal.

Nº 177.

23. The whole cattle on the ground, confidered as a quantity, are hypothecated for a year's rent, one after Scotland another fuccessively. The landlord may apply this hypothec for payment of the past year's rent, at any time within three months from the last conventional term of payment, after which it ceases for that year. As the tenant may increase the subject of this hypothec, by purchasing oxen, sheep, &c. so he can impair it, by felling part of his flock ; but if the landlord fuspects the tenant's management, he may, by fequestration or poinding, make his right, which was before general upon the whole flock, special upon every individual. A fuperior has also a hypothec for his feu-duty, of the fame kind with that just explained.

24. In tacks of houses, breweries, shops, and other tenements, which have no natural fruits, the furniture and other goods brought into the fubject fet are hypothecated to the landlord for one year's rent. But the tenant may by fale impair this hypothec, as he might that of cattle in rural tenements; and indeed, in the particular case of a shop, the tenant rents it for no

other purpose than as a place of fale.

SECT. VII. Of the transmission of rights, by confirmation and resignation.

A VASSAL may transmit his feu either to universal Transmit fuccessors, as heirs; or to fingular successors, i. e. those fion of f who acquire by gift, purchase, or other fingular title. dal right

This last fort of transmission is either voluntary, by disposition; or necessary, by adjudication.

2. By the first feudal rules, no superior could be compelled to receive any vaffal in the lands, other than the heir expressed in the investiture; for the superior alone had the power of afcertaining to what order of heirs the fee granted by himfelf was to descend. But this right of refufal in the fuperior did not take place, (1.) In the case of creditors apprifers or adjudgers, whom fuperiors were obliged to receive upon payment of a year's rent (1469, c. 37. 1672, c. 19.): (2.) In the case of purchasers of bankrupt estates, who were put on the fame footing with adjudgers by 1600. c. 20. The crown refuses no voluntary disponee, on his paying a composition to the exchequer of a fixth part of the valued rent. Now, by 20 Geo. II. fuperiors are directed to enter all fingular fucceffors (except incorporations) who shall have got from the vaffal a disposition, containing procuratory of relignation; they always receiving the fees or cafualties that law intitles them to on a vaffal's entry, i. e. a year's rent (A).

3. Bafe rights, i. e. dispositions to be holden of the Base right disponer, are transmissions only of the property, the fuperiority remaining as formerly. As this kind of right might, before establishing the registers, have been kept quite concealed from all but the granter and receiver, a public right was preferable to it, unless

cloathed

⁽A) It was long matter of doubt how this composition due to the superior upon the entry of singular succeffors should be regulated. The matter at last received a solemn decision; sinding, That the superior is intitled, for the entry of fingular fuccesfors, in all cases where such entries are not taxed, to a year's rent of the fubject, whether lands or houses, as the same are set, or may be set at the time; deducting the seuduty and all public burdens, and likewife all annual burdens imposed on the lands by confent of the superior, with all reasonable annual repairs to houses and other perishable subjects.

rights.

cloathed with possession: but as this distinction was no longer necessary after the establishment of the records, all infeftments are declared preferable, according to the dates of their feveral registrations; without respect to the former distinction of base and public, or of being cloathed and not cloathed with poffession.

4. Public rights, i. e. dispositions to be holden of the granter's superior, may be perfected either by confirmation or refignation; and therefore they generally contain both precept of feifin and procuratory of refignation. When the receiver is to complete his right in the first way, he takes feisin upon the precept : but fuch feifin is ineffectual without the fuperior's confirmation; for the disponee cannot be deemed a vasfal till the fuperior receive him as fuch, or confirm the holding. By the usual style in the transmission of lands, the disposition contains an obligation and precept of infeftment, both a me and de me, in the option of the disponee; upon which, if seisin is taken indefinitely, it is conftrued in favour of the disponee to be a base infeftment, because a public right is null without confirmation; but if the receiver shall afterwards obtain the fuperior's confirmation, it is confidered as if it had

been from the beginning a public right. 5. Where two feveral public rights of the same subject are confirmed by the superior, their preference is governed by the dates of the confirmations, not of the

infestments confirmed; because it is the confirmation

which completes a public right. 6. Though a public right becomes, by the superior's confirmation, valid from its date; yet if any mid impediment intervene betwixt that period and the confirmation, to hinder the two from being conjoined. e. g. if the granter of a public right should afterwards grant a base right to another, upon which seisin is taken before the superior's confirmation of the first, the confirmation will have effect only from its own date: and confequently the base right first completed will carry the property of the lands preferable to the public

7. Refignation is that form of law, by which a vaffal furrenders his feu to his fuperior; and it is either ad perpetuam remanentiam, or in favorem. In relignations ad remanentiam, where the feu is refigned, to the effect that it may remain with the superior, the superior, who before had the fuperiority, acquires, by the refignation, the property also of the lands refigned: and as his infeftment in the lands ftill fubfifted, notwithflanding the right by which he had given his vaffal the property; therefore, upon the vaffal's refignation, the superior's right of property revives, and is confolidated with the superiority, without the necessity of a new infeftment; but the instrument of resignation must be recorded.

8. Refignations in favorem are made, not with an intention that the property refigned should remain with the superior, but that it should be again given by him, in favour either of the refigner himself, or of a third party; consequently the fee remains in the refigner, till the person in whose favour resignation is made gets his right from the superior perfected by seisin. And because refignations in favorem are but incomplete perfonal deeds, our law has made no provision for recording them. Hence, the first feisin on a second refigna-

Vol. IX. Part II.

tion is preferable to the laft feifin upon the first refig. Law of nation; but the superior, accepting a second resigna- Scotland. tion, whereupon a prior feifin may be taken in prejudice of the first refignatory, is liable in damages.

o. By our former decisions, one who was vested with a personal right of lands, i. e. a right not completed by feifin, effectually diverted himfelf by difponing it to another; after which no right remained in the difponer, which could be carried by a fecond disposition. because a personal right is no more than a jus obligationis, which may be transferred by any deed fufficiently expressing the will of the granter. But this doctrine. at the same time that it rendered the security of the records extremely uncertain, was not truly applicable to fuch rights as required feifin to complete them; and therefore it now obtains, that the granter even of a perfonal right of lands is not fo divefted by conveying the right to one person, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the difpositions, but on the priority of the seifins following upon them.

SECT. VIII. Of Redeemable Rights.

clxix.

An heritable right is faid to be redeemable, when legal, Revertions it contains a right of reversion, or return, in favour of the person from whom the right flows. Reversions are either legal, which arife from the law itfelf, as in adjudications, which law declares to be redeemable within a certain term after their date; or conventional, which are conflituted by the agreement of parties. as in wadfets, rights of annualrent, and rights in fecurity. A wadiet (from wad or pledge) is a right, by Wadiet. which lands, or other heritable fubjects, are impignorated by the proprietor to his creditor in fecurity of his debt; and, like other heritable rights, is perfected by feifin. The debtor, who grants the wadfet, and has the right of reversion, is called the reverser; and

2. Wadfets, by the prefent practice, are commonly made out in the form of mutual contracts, in which one party fells the land, and the other grants the right of reversion. When the right of reversion is thus incorporated in the body of the wadfet, it is effectual without registration; because the fingular successor in the wadfet is, in that cafe, fufficiently certified of the reversion, though it be not registered, by looking into his own right, which bears it in gremio. But where the right of reversion is granted in a separate writing, it is ineffectual against the singular successor of the wadletter, unless it be registered in the register of feifins within 60 days after the date of the feifin upon

the creditor, receiver of the wadfet, is called the wad-

3. Rights of reversion are generally esteemed Aridi Reversion juris; yet they go to heirs, though heirs should not is strict inbe mentioned, unless there be some clause in the right, ris. discovering the intention of parties, that the reversion should be personal to the reverser himself. In like manner, though the right should not express a power to redeem from the wadfetter's heir, as well as from himfelf, redemption will be competent against the heir. All our lawyers have affirmed, that reversions cannot

mation.

Effect of

confirma-

tion.

Law of be affigned, unless they are taken to affignees; but Scotland from the favour of legal diligence, they may be ad-

Redemp-

judged. 4. Reversions commonly leave the reverser at liberty to redeem the lands quandocunque, without restriction in point of time; but a clause is adjected to some reverfions, that if the debt be not paid against a determinate day, the right of reversion shall be irritated, and the lands shall become the irredeemable property of the wadfester. Nevertheless, the irritancy being penal, as in wadfets, where the fum lent falls always fhort of the value of the lands, the right of redemption is by indulgence continued to the reverfer, even after the term has expired, while the irritancy is not declared But the reverfer, if he does not take the benefit of this indulgence within 40 years after the lapse of the term, is cut out of it by prescription.

5. If the reverfer would redeem his lands, he must use an order of redemption against the wadsetter: the first step of which is premonition (or notice given under form of instrument) to the wadsetter, to appear at the time and place appointed by the reversion, then and there to receive payment of his debt, and thereupon to renounce his right of wadfet. In the voluntary redemption of a right of wadfet holden bafe, a renunciation duly registered re-establishes the reverser in the full right of the lands. Where the wadlet was granted to be holden of the granter's fuperior, the fu perior must receive the reverser, on payment of a year's rent, if he produce a disposition from the wadsetter, containing procuratory of relignation. If, at executing the wadfet, the fuperior has granted letters of regress, i. e. an obligation again to enter the reverser upon redemption of the lands, he will be obliged to receive him, without payment of the year's rent. But letters of regrefs will not have this effect against fingular fuccessors in the superiority, if they are not regiftered in the register of reversions. All wadfets that remain personal rights, are extinguished by simple difcharges, though they should not be recorded

Letters of

regrefs.

6. If the wadfetter either does not appear at the Redemption money, time and place appointed, or refuses the redemptionmoney, the reverler must confign it under form of instrument, in the hands of the person appointed in the right of reversion; or, if no person be named, in the hands of the clerk to the bills, a clerk of fession, or any responsal person. An instrument of consignation, with the confignatory's receipt of the money configned, completes the order of redemption, flops the farther currency of interest against the reverser, and founds him in an action for declaring the order to be formal, and the lands to be redeemed in confequence

> 7. After decree of declarator is obtained, by which the lands are declared to return to the debtor, the configned money, which comes in place of the lands, becomes the wadfetter's, who therefore can charge the confignatory upon letters of horning to deliver it up to him; but, because the reverser may, at any time before decree, pass from his order, as one may do from any other step of diligence, the configned sums continue to belong to the reverfer, and the wadfetter's interest in the wadset continues heritable till that period.

8. If the wadfetter chooses to have his money ra-

ther than the lands, he must require from the reverser. Law of under form of inftrument, the fums due by the wad. Scotland. fet, in terms of the right. The wadfet-fums continue heritable, notwithstanding requisition, which may be passed from by the wadsetter even after the reverser has configned the redemption-money in confequence thereof.

9. Wadlets are either proper or improper. A pro-Wadlets per wadfet is that whereby it is agreed, that the use proper and of the land shall go for the use of the money; so that improper. the wadletter takes his hazard of the rents, and enjoys them without accounting, in fatisfaction, or in folutum of his interest.

10. In an improper wadlet, the reverler, if the rent should fall short of the interest, is taken bound to make up the deficiency; if it amounts to more, the wadfetter is obliged to impute the excrefcence towards extinction of the capital: And, as foon as the whole fums, principal and interest, are extinguished by the wadfetter's poffession, he may be compelled to renounce, or divest himself in favour of the reverser.

11. If the wadfetter be intitled by his right to enjoy the rents without accounting, and if at the same time the reverier be fubjected to the hazard of their deficiency, fuch contract is juftly declared usurious: and also in all proper wadfets wherein any unreasonable advantage has been taken of the debtor, the wadfetter must (by act 1661), during the not requisition of the fum lent, either quit his possession to the debtor, upon his giving fecurity to pay the interest, or fubject himfelf to account for the furplus-rents, as in improper wadfets.

12. Infeftments of annualrent, the nature of which Right of has been explained, are also redeemable rights. A annualrent right of annualrent does not carry the property of the lands; but it creates a real nexus or burden upon the property, for payment of the interest or annualrent contained in the right; and confequently the bygone interests due upon it are debita fundi. The annualrenter may therefore either infilt in a real action for obtaining letters of poinding the ground, or fue the tenant in a personal action towards the payment of his past interest: and in a competition for those rents, the annualrenter's preference will not depend on his having used a poinding of the ground, for his right was completed by the feifin; the power of poinding the ground, arising from that antecedent right, is mera facultatis, and need not be exercifed, if payment can be otherwife got. As it is only the interest of the fum lent which is a burden upon the lands, the annualrenter, if he wants his principal fum, cannot recover it either by poinding or by a personal action against the debtor's tenants; but must demand it from the debtor himself, on his personal obligation in the bond, either by requifition, or by a charge of letters of horning, according

as the right is drawn. 13. Rights of annualrent, being servitudes upon the property, and confequently confident with the right of property in the debtor, may be extinguished without refignation.

14. Infeftments in fecurity are another kind of re- Rights of deemable rights (now frequently used in place of rights fecurity. of annualrent), by which the receivers are infeft in the lands themselves, and not simply in an annualrent forth of them, for fecurity of the principal fums, interest,

Part III.

Scotland. in fecurity be granted to a creditor, he may thereupon enter into the immediate possession of the lands or annualrent for his payment. They are extinguished as rights of annualrent.

15. All rights of annualrent, rights in fecurity, and generally whatever constitutes a real burden on the fee, may be the ground of an adjudication, which is preferable to all adjudications, or other diligences, intervening between the date of the right and of the adjudication deduced on it; not only for the principal fum contained in the right, but also for the whole past interest contained in the adjudication. This pre-

ference arises from the nature of real debts, or debita fundi: but in order to obtain it for the interest of the interest accumulated in the adjudication, such adjudication must proceed on a process of poinding the ground.

clax.

SECT. IX. Of Servitudes.

kinds of

SERVITUDE is a burden affecting lands, or other lieritable fubjects, whereby the proprietor is either restrained from the full use of what is his own, or is obliged to fuffer another to do fomething upon it. Servitudes are either natural, legal, or conventional. Nature itself may be said to constitute a servitude upon inferior tenements, whereby they must receive the water that falls from those that stand on higher ground. Legal fervitudes are established by statute or custom, from confiderations of public policy; among which may be numbered the restraints laid upon the proprietors of tenements within the city of Edinburgh. There is as great a variety of conventional fervitudes, as there are ways by which the exercise of property may be restrained by paction in favour of another.

2. Conventional fervitudes are constituted, either by grant, where the will of the party burdened is expressed in writing : or by prescription, where his consent is prefumed from his acquiescence in the burden for 40 years. A fervitude conflituted by writing, or grant, is not effectual against the granter's fingular successors, unless the grantee has been in the use or exercise of his right : but they are valid against the granter and his heirs, even without use. In fervitudes that may be acquired by prescription, 40 years exercise of the right is sufficient, without any title in writing, other than a charter and feifin of the lands to which the fervitude is

claimed to be due.

3. Servitudes conflituted by grant are not effectual, in a question with the superior of the tenement burdened with the fervitude, unless his confent be adhibited; for a superior cannot be hurt by his vassal's deed: but where the fervitude is acquired by prescription, the confent of the superior, whose right afforded him a good title to interrupt, is implied. A fervitude by grant, though followed only by a partial possession, must be governed, as to its extent, by the tenor of the grant; but a fervitude by prescription is limited by the measure or degree of the use had by him who prescribes: agreeably to the maxim, Tantum prascriptum, quantum

Predial fer-4. Servitudes are either predial or personal. Predial Vitudes. fervitudes are burdens imposed upon one tenement, in

Law of and penalty, contained in the rights. If an infeftment tude is due is called the dominant, and that which owes it is called the fervient tenement. No person can have Scotland. right to a predial fervitude, if he is not proprietor of fome dominant tenement that may have benefit by it : for that right is annexed to a tenement, and fo cannot pals from one person to another, unless some tenement goes along with it.

5. Predial fervitudes are divided into rural fervitudes. or of lands; and urban fervitudes, or of houses. The Rural fervis rural fervitudes of the Romans were iter, adus, via, tudes. aquaductus, aquahaustus, and jus pascendi pecoris. Similar fervitudes may be constituted with us, of a footroad, horfe-road, cart-road, dams, and aqueducts, watering of cattle, and pasturage. The right of a highway is not a fervitude constituted in favour of a particular tenement, but is a right common to all travellers. The care of high-ways, bridges, and ferries, is committed to the sheriffs, justices of peace, and commissioners of fupply in each shire.

6. Common pasturage, or the right of feeding one's cattle upon the property of another, is sometimes conflituted by a general clause of pasturage in a charter or disposition, without mentioning the lands burdened; in which cafe, the right comprehends whatever had been formerly appropriated to the lands disponed out of the granter's own property, and likewife all pafturage due to them out of other lands. When a right of pasturage is given to several neighbouring proprietors, on a moor or common belonging to the granter, indefinite as to the number of cattle to be paltured, the extent of their feveral rights is to be proportioned according to the number that each of them can fodder in winter upon his own dominant tenement.

7. The chief fervitudes of houses among the Ro. Urban for mans were those of support, viz. tigni immittendi, and vitudes. oneris ferendi. The first was the right of fixing in our neighbours wall a joift or beam from our house: the fecond was that of relling the weight of one's house

upon his neighbour's wall

8. With us, where different floors or ftories of the fame house belong to different persons, as is frequent in the city of Edinburgh, the property of the house cannot be faid to be entirely divided; the roof remains a common roof to the whole, and the area on which the house slands supports the whole; so that there is a communication of property, in confequence of which the proprietor of the ground-floor must, without the constitution of any servitude, uphold it for the support of the upper, and the owner of the highest story must uphold that as a cover to the lower. When the highest floor is divided into garrets among the several proprietors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret,

9. No proprietor can build, fo as to throw the rainwater falling from his own house, immediately upon his neighbour's ground, without a special fervitude, which is called of fillicide; but, if it falls within his own property, though at the smallest distance from the march, the owner of the inferior tenement must re-

ceive it.

10. The fervitudes altius non tollendi, et non officiendi luminibus vel prospettui, restrain proprietors from raifing their houses beyond a certain height, or from mafavour of another tenement. That to which the fervi- king any building whatfoever that may hurt the light

4 Q 2

barred from afterwards building a house on his property, or raifing it to what height he pleafes, unless he be tied down by his own confent.

Bervitude of

II. We have two predial fervitudes to which the feal and di-Romans were strangers, viz. that of fuel or feal and divot, and of thirlage. The first is a right, by which the owner of the dominant tenement may turn up peats, turfs, feals, or divots, from the ground of the fervient, and carry them off either for fuel, or thatch, or the other uses of his own tenement.

Phirlage.

12. THIRLAGE is that fervitude, by which lands are affricted, or thirled, to a particular mill; and the poffeffors bound to grind their grain there, for payment of certain multures and sequels as the agreed price of grinding. In this servitude, the mill is the dominant tenement, and the lands aftricted (which are called a'fo the thirl or fucken) the fervient. Multure is the quantity of grain or meal payable to the proprietor of the mill, or to the multerer his tackiman. The fequels are the small quantities given to the servants, under the name of knaveship, bannock, and lock or gowpen. The quantities paid to the mill by the lands not aftricted, are generally proportioned to the value of the labour, and are called out town or out fucken multures; but those paid by the thirl are ordinarily higher, and are called in town or in fucken multures.

13. Thirlage may be conflituted by a land-holder, when, in the disposition of certain lands, he aftricts them to his own mill: or when, in the disposition of a mill, he aftricts his own lands to the mill disponed; or when, in letting his lands, he makes it a condition in the tacks. The grant of a mill with the general claufe of multures, without specifying the lands aftricted, conveys the thirlage of all the lauds formerly aftricted to that mill, whether they were the property of the

granter, or of a third party.

14. A less sormal constitution serves to astrict barony-lands to the mill of the barony, than is necessary in any other thirlage; which perhaps proceeds from the effects of the union betwixt the two. Hence, if a baron makes over the mill of a barony, cum multuris, or cum astriciis multuris, it infers an astriction of the barony lands to the mill conveyed, although they had not formerly been aftricted. But if, prior to the baron's conveyance of his mill cum multuris, he had fold any part of the barony lands to another cum multuris, the first purchaser's lands are not astricted by the posterior grant; for a right of lands with the multures, implies firidi juris: they are not therefore prefumed, if the rin. a freedom of these lands from thirlage.

15. Thirlage is either, 1. Of grindatle corns; or, 2. Of all growing corns; or, 3. Of the inveda et illata, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is in practice restricted to the corns not at liberty to extend it for the use of any manufacwhich the tenants have occasion to grind, either for the ture which may require an extraordinary expence of support of their families, or for other uses; the surplus fuel; but must confine it to the natural uses of the domay be carried out of the thirl unmanufactured, with- minant tenement. out being liable in multure. Where it is of the grana

Law of or prospect of the dominant tenement. These servi- astricted, with the exceptions, 1. Of feed and horsetudes cannot be conflitted by prescription alone : for, corn, which are destined to uses inconfishent with grind- Scotland. though a proprietor should have his house ever so low, ing; and, 2. Of the farm duties due to the landlord. or should not have built at all upon his grounds for 40 if they are delivered in grain not grinded. But, if the years together, he is prefumed to have done fo for his rent be payable in meal, flour, or malt, the grain of own conveniency or profit; and therefore cannot be which thefe are made must be manufactured in the do-

16. The thirlage of investa et illata is seldom constituted but against the inhabitants of a borough or village, that they shall grind all the unmanufactured grain they import thither at the dominant mill. Multure, therefore, cannot be exacted in a thirlage of investa ... illata, for flour or oat-meal brought into the fervient tenement, unless the importer had bought it in grain, and grinded it at another mill. The same grain that owes multure, as granum crescens, to the mill in whose thirl it grew, if it shall be afterwards brought within a borough where the investa et illata are thirled, must pay a fecond multure to the proprietor of that dominant tenement; but, where the right of these two thirlages is in the same proprietor, he cannot exact both. Where lands are thirled in general terms, without expreffing the particular nature of the fervitude, the lightest thirlage is prefumed, from the favour of liberty; but in the aftriction of a borough or village, where there is no growing grain which can be the subject of thirlage, the astriction of inveda et illata must be necessarily understood.

17. Thirlage, in the general case, cannot be established by prescription alone, for its que funt niere facultatis non prascribitur; but where one has paid for 40 years together the heavy infucken multures, the flightest title in writing will fabject his lands. Thirlage may, contrary to the common rule, be constituted by prescription alone, I. Where one pays to a mill a certain fum, or quantity of grain yearly, in name of multure, whether he grinds at it or not, (called dry multure). 2. In mills of the king's property; which is condituted jure corona, without titles in writing; and, where he derives right from another, his titles are more liable to be loft. This is extended in practice to mills belonging to church-lands, where thirty years poffession is deemed equivalent to a title in writing, from a prefumption that their rights were destroyed at the reformation. Though thirlage itself cannot be conflituted by mere possession, the proportion of multure payable to the dominant tenement may be fo fixed.

18. The possessions of the lands aftricted are bound to uphold the mill, repair the dam-dykes and aqueducts, and bring home the millstones. These services, though not expressed in the constitution, are implied. Servinges

19. Servitudes, being restraints upon property, are are firithing acts upon which they are claimed can be explained confittently with freedom; and, when fervitudes are conflituted, they ought to be used in the way least burdenfome to the fervient tenement. Hence, one who has a fervitude of peats upon his neighbour's mofs, is

20. Servitudes are extinguished, (1.) Confusione, crescentia, the whole grain growing upon the thirl is when the person comes to be proprietor of the domi-

Liferent.

Liferents

Terce.

Law of nant and fervient tenements; for res fua nomini fervit, and the use the proprietor thereafter makes of the fervient tenement is not jure servitulis, but is an act of property. (2.) By the perishing either of the dominant or fervieut tenement. (3.) Servitudes are lost non utendo, by the dominant tenement neglecting to use the right for 40 years; which is confidered as a dereliction of it, though he who has the fervient tenement should have made no interruption by doing acts con-

> 21. Personal servitudes are those by which the property of a tabject is burdened, in favour, not of a tenement, but of a person. The only personal servitude known in our law, is ufufruct or liferent; which is a right to use and enjoy a thing during life, the fubstance of it being preserved. A liferent cannot therefore be constituted upon things which perish in the use; and though it may upon subjects which gradually wear out by time, as household furniture, &c. yet with us, it is generally applied to heritable fubjects. He whose property is burdened, is usually called the fiar.

trary to the fervitude.

22. Liferents are divided into conventional and legal. Conventional liferents are either simple, or by refervation. A simple liferent, or by a leparate conflitution, is that which is granted by the proprietor in favour of another: And this fort, contrary to the nature of predial fervitudes, requires seifin in order to affect fingular fucceffors; for a liferent of lands is, in ftrict speech, not a servitude, but a right resembling property which constitutes the liferenter vasfal for life; and fingular fucceffors have no way of discovering a liferent-right, which perhaps is not yet commenced, but by the records: whereas, in predial fervitudes, the conflant use of the dominant tenement makes them public. The proper right of liferent is intransmissible; offibus ufufructuarii inharet: When the profits of the liferented fubject are transmitted to another, the right becomes merely perfonal: for it intitles the affignee to the rent, not during his own life, but his cedent's; and is therefore carried by fimple affignation, without

23. A liferent by refervation, is that which a proprietor referves to himfelt in the fame writing by which he conveys the fee to another. It requires no feifin; for the granter's former feifin, which virtually included the liferent, still subfists as to the liferent which is exprefsly referved. In conjunct infeftments taken to hufband and wife, the wife's right of conjunct fee refolves, in the general cafe, into a literent.

24. Liferents, by law, are the terce and the courtefy. The terce (tertia) is a liferent competent by law to widows, who have not accepted of special provisions, in the third of the heritable subjects in which their husbands died inseft; and takes place only where the marriage has subsisted for year and day, or where Law of a child has been born alive of it (A).

25. The terce is not limited to lands, but extends to teinds, and to fervitudes and other burdens affecting lands; thus, the widow is intitled, in the right of her terce, to a liferent of the third of the fams fecured, either by rights of annualrent, or by rights in fecurity. In improper wadfets, the terce is a third of the fum lent : In those that are proper, it is a third of the wadfet lands; or, in case of redemption, a third of the redemption money. Neither rights of reversion, superiority, nor patronage, fall under the terce; for none of these have fixed profits, and so are not proper subjects for the widow's fubfiltence; nor tacks, because they are not feudal rights. Burgage-tenements are also excluded from it, the reason of which is not so obvious. Since the husband's scifin is both the measure and security of the terce, fuch debts or diligences alone, as exclude the husband's seifin, can prevail over it.

26. Where a terce is due out of lands burdened with a prior terce ftill fubfifting, the fecond tercer has only right to a third of the two thirds that remain unaffected by the first terce. But upon the death of the first widow, whereby the lands are difburdened of her terce, the leffer terce becomes enlarged, as if the first had never existed. A widow, who has accepted of a special provision from her husband, is thereby excluded from the terce, unless such provision shall contain a

claufe that she shall have right to both.

27. The widow has no title of possession, and so cannot receive the rents in virtue of her terce, till she be ferved to it; and in order to this, the must obtain a brief out of the chancery, directed to the sheriff, who calls an inquest, to take proof that she was wife to the deceafed, and that her husband died infest in the subjects contained in the brief. The fervice or fentence of the jury, finding thefe points proved, does, without the necessity of a retour to the chancery, intitle the wife to enter into the pofferfion; but the can only poffels with the heir pro indiviso, and fo cannot remove tenants till the sheriff kens her to her terce, or divides the lands between her and the heir. In this division, after determining by lot or kavil, whether to begin by the fun or the shade, i. e. by the east or the west, the fheriff fets off the two first acres for the heir, and the third for the widow. Sometimes the division is executed, by giving one entire farm to the widow, and two of equal value to the heir. The widow's right is not properly conflituted by this fervice; it was conflituted before by the husband's seifin, and fixed by his death; the fervice only declares it, and fo intitles her to the third part of the rents retro to her husband's death, preferable to any rights that may have affected the lands in the intermediate period between that and her

own

⁽A) In the cafe referred to, when treating of the effects of the diffolution of marriage within the year without a living child, and where no fpecial provisions had been granted to, or accepted by, the widow; she did not demand her legal provisions of terce or jus reliefes, but merely infifted, that as widow she was intitled to be alimented out of the heritable effate of which her husband died possessed: So that the decision in that case cannot fo properly be faid to be an alteration in the law, as an equitable interpolition of the court of feffion, in their capacity as a court of equity, in order to grant a fublifience to the widow of a man whose estate was fully fufficient, and who, it could not reasonably be presumed, would have inclined that his widow should be left destitute, when his estate went perhaps to a distant feries of heirs.

own fervice. The relict, if the was reputed to be lawful wife to the deceafed, must be served, notwithstand. ing any objections by the heir against the marriage,

Courtefy.

which may be afterwards tried by the commissary. 28. Courtely is a liferent given by law, to the fur-

viving hufband, of all his wife's heritage in which fhe died infeft, if there was a child of the marriage born alive. A marriage, though of the longest continuance, gives no right to the courtefy, if there was no iffue of it. The child born of the marriage must be the mother's heir: If the had a child of the former marriage, who is to fucceed to her estate, the husband has no right to the courtefy while fuch child is alive ; fo that the courtefy is due to the hufband, rather as father to an heir, than as husband to an heirefs. Heritage is here opposed to conquest; and so is to be understood only of the heritable rights to which the wife fucceeded as heir to her ancestors, excluding what she herfelf

had acquired by fingular titles.

29. Because the husband enjoys the liferent of his wife's whole heritage, on a lucrative title, he is confidered as her temporary reprefentative; and fo is liable in payment of all the yearly burdens chargeable on the fubject, and of the current interest of all her debts, real and perfonal, to the value of the yearly rent he enjoys by the courtefy. The courtefy needs no folemnity to its constitution: That right which the husband had to the rents of his wife's estate during the marriage, jure mariti, is continued with him after her death, under the name of courtefy, by an act of the law itself. As in the terce, the husband's scifin is the ground and measure of the wife's right; so in the courtely, the wife's feifin is the foundation of the husband's; and the two rights are, in all other respects, of the fame nature; if it is not that the courtefy extends to burgage holdings, and to superiorities.

30. All liferenters must use their right falva rei fubflantia: whatever therefore is part of the fee itself, cannot be incroached on by the liferenter, e.g. woods or growing timber, even for the necessary uses of the liferented tenement. But, where a coppice or filva cadua has been divided into hags, one of which was in use to be cut annually by the proprietor, the liferenter may continue the former yearly cuttings; because these are confidered as the annual fruits the subject was intended to yield, and so the proper subject of a liferent.

31. Liferenters are bound to keep the fubject liferented in proper repair. They are also burdened with the alimony of the heir, where he has not enough for maintaining himself. The bare right of apparency founds the action against the liferenter. It is a burden personal to the liferenter himself, and cannot be thrown upon his adjudging creditors as coming in his place by their diligences. Liferenters are also subjected to the payment of the yearly cesses, stipends, &c. falling due during their right, and to all other burdens that attend the fubject liferented.

32. Liferent is extinguished by the liferenter's death. That part of the rents which the liferenter had a proper right to, before his death, falls to his executors; the reft, as never having been in bonis of the deceased, goes to the fiar. Martinmas and Whitfunday are, by our custom, the legal terms of the payment of rent: confequently, if a liferenter of lands furvives the term of Whitfunday, his executors are intitled to the half

of that year's rent, because it was due the term before his death; and if he survives the term of Martinmas. they have right to the whole. If the liferenter, being in the natural possession, and having first sowed the ground, should die, even before Whitfunday, his executors are intitled to the whole crop, in respect that both seed and industry were his. In a liferent of money constituted by a moveable bond, the executors have a right to the interest, down to the very day of the liferenter's death, where no terms are mentioned for the payment thereof: but in the case of an heritable bond, or of a money liferent fecured on land, the interests of liferenter and fiar (or of heir and executor, for the fame rules ferve to fix the interests of both) are both governed by the legal terms of land-rent, without regard to the conventional.

SECT. X. Of Teinds.

clxx2

TEINDS, or tithes, are that liquid proportion of Teinds our rents or goods, which is due to churchmen, for performing divine fervice, or exercifing the other spiritual functions proper to their feveral offices. Most of the canonifts affirm, that the precise proportion of a tenth, not only of the fruits of the ground, but of what is acquired by perfonal industry, is due to the Christian clergy, of divine right, which they therefore call the proper patrimony of the church; though it is certain that tithes, in their infancy, were given, not to the clergy alone, but to lay-monks who were called pauperes, and to other indigent persons. Charles the Great

was the first fecular prince who acknowledged this right in the church. It appears to have been received with us, as far back as David I.

2. The person employed by a cathedral church or monastery to serve the cure in any church annexed was called a vicar, because he held the church, not in his own right, but in the right or vice of his employers; and fo was removeable at pleasure, and had no fhare of the benefice, other than what they thought fit to allow him : but, in the course of time, the appellation of vicar was limited to those who were made perpetual, and who got a flated share of the benefice for their incumbency; from whence arose the distinction

of benefices into parfonages and vicarages.

3. Parsonage teinds are the teinds of corn; and they are fo called because they are due to the parson or other titular of the benefice. Vicarage teinds are the finall teinds of calves, lint, hemp, eggs, &c. which were commonly given by the titular to the vicar who ferved the cure in his place. The first fort was univerfally due, unless in the case of their infeudation to laics, or of a pontifical exemption; but, by the customs of almost all Christendom, the lesser teinds were not demanded where they had not been in use to be paid. By the practice of Scotland, the teinds of animals, or of things produced from animals, as lambs, wool, calves, are due though not accustomed to be paid; but roots, herbs, &c. are not tithable, unless use of payment be proved: neither are perfonal teinds (i. e. the tenth of what one acquires by his own industry) acknowledged by our law: yet they have been found due, when fupported by 40 years possession.

4. The parson who was intitled to the teind of corns, made his right effectual, either by accepting of a cer-

Scorland

crown.

tain number of teind-bolls yearly from the proprietor in fatisfaction of it; or, more frequently, by drawing or fenarating upon the field his own tenth part of the corns, after they were reaped, from the flock or the remaining nine-tenths of the crop, and carrying it off to his own granaries; which is called drawn teind.

5. After the reformation, James VI. confidered him-Annexation of churchfelf as proprietor of all the church-lands; partly belands to the cause the purposes for which they had been granted were declared superfittious; and partly, in consequence of the refignations which he, and queen Mary his mother, had procured from the beneficiaries; and even as to the teinds, though our reformed clergy also claimed them as the patrimony of the church, our fovereign did not submit to that doctrine farther than extended to a competent provision for ministers. He therefore erected or fecularifed feveral abbacies and priories into temporal lordships; the grantees of which were called fometimes lords of eredion, and fometimes titulars, as having by their grants the fame title to the erected

> 6. As the crown's revenue fuffered greatly by these erections, the temporality of all church benefices (i.e. church lands) was, by 1587. c. 29. annexed to the crown. That statute excepts from the annexation such benefices as were established before the reformation in laymen, whose rights the legislature had no intention to weaken. Notwithstanding this statute, his majesty continued to make farther erections, which were declared null by 1592, c. 119. with an exception of fuch as had been made in favour of lords of parliament

fince the general act of annexation in 1587.

benefices that the monasteries had formerly.

7. King Charles I. foon after his fuccession, raised a reduction of all these erections, whether granted before or after the act of annexation, upon the grounds mentioned at length by Mr Forbes in his treatife of tithes, p. 250. At last the whole matter was referred to the king himfelf by four feveral fubmissions or compromiles; in which the parties on one fide were the titulars and their tacksmen, the bishops with the inferior clergy, and the royal boroughs, for the interest they had in the teinds that were gifted for the provision of ministers, schools, or hospitals within their boroughs; and, on the other part, the proprietors who wanted to have the leading of their own teinds. The submission by the titulars contained a furrender into his majesty's hands of the superiorities of their several erections.

8. Upon each of these submissions his majesty pronounced separate decrees arbitral, dated Sept. 2, 1620. which are fubjoined to the acts of parliament of his reign. He made it lawful to proprietors to fue the titulars for a valuation, and if they thought fit for a fale alfo, of their teinds, before the commissioners named or to be named for that purpose. The rate of teind, when it was possessed by the proprietor jointly with the stock, for payment of a certain duty to the titular, and fo did not admit a separate valuation, was fixed at a fifth part of the constant yearly rent, which was accounted a reafonable furrogatum, in place of a tenth of the increase. Where it was drawn by the titular, and confequently might be valued feperately from the flock, it was to be valued as its extent should be afcertained upon a proof before the commissioners; but in this last valuation, the king directed the fifth part to be deducted from the proved teind, in favour of the proprietor,

which was therefore called the king's eafe. The proprietor fuing for a valuation gets the leading of his own teinds as foon as his fuit commences, providing he does not allow proteffation to be extracted against him for not infifting.

9. Where the proprietor infifted also for a sale of his teinds, the titular was obliged to fell them at nine years purchase of the valued teind-duty. If the pursuer had a tack of his own teinds, not yet expired; or if the defender was only tackiman of the teinds, and fo could not give the purfuer an heritable right; an abatement of the price was to be granted accordingly by the commiffioners.

10. There is no provision in the decrees-arbitral, for felling the teinds granted for the fustentation of minifters, universities, schools, or hospitals; because these were to continue, as a perpetual fund, for the maintenance of the persons or societies to whom they were appropriated; and they are expressly declared not subject to fale, by 1690, c. 30 .- 1693, c. 23. By the last of these acts, it is also provided, that the teinds belonging to bishops, which had then fallen to the crown upon the abolishing of episcopacy, should not be subject to fale as long as they remained with the crown not disposed of; nor those which the proprietor, who

had right both to flock and teind, referved to himfelf

in a fale or feu of the lands. But, though none of thefe teinds can be fold, they may be valued.

11. The king, by the decrees arbitral, declared his King'sright own right to the fuperiorities of erection which had riorities of been refigned to him by the fubmiffion, referving to erection. the titulars the feu-duties thereof, until payment by himself to them of 1000 merks Scots for every chalder of feu-victual, and for each 100 merks of feu-duty; which right of redeeming the feu-duties was afterwards renounced by the crown. If the churchvaffal should confent to hold his lands of the titular. he cannot thereafter recur to the crown as his imme-

diate fuperior. 12. In explaining what the conftant rent is by Rules for fixing the which the teind must be valued, the following rules rent in the are observed. The rent drawn by the proprietor valuation of from the fale of subjects, that are more properly parts teinds. of the land than of the finits, e. g. quarries, minerals, mosses, &c. is to be deducted from the rental of the lands; and also the rent of Supernumerary houses, over and above what is necessary for agriculture; and the additional rent that may be paid by the tenant, in confideration of the proprietor's undertaking any burden that law imposes on the tenant, e. g. upholding the tenant's houses, because none of these articles are paid properly on account of the fruits. Orchards muit also be deducted, and mill rent, because the profits of a mill arise from industry; and the corns manufactured there fuffer a valuation as rent payable by the tenant, and therefore ought not to be valued a second time against the ticular as mill-rent. The yearly expence of culture ought not to be deducted; for no rent can be produced without it: but, if an improvement of rent is made at an uncommon expence, e. g. by draining a lake, the proprietor is allowed a reasonable abatement on that account.

13. Notwithstanding the feveral ways of misapply-Teindares ing parochial teinds in the times of Popery, fome few deemables. benefices remained entire in the hands of the parfons, &c.

continued to have the full right to them, as proper beneficiaries: but a power was afterwards granted to the patron, to redeem the whole teind from fuch beneficiaries, upon their getting a competent flipend modified to them; which teind fo redeemed, the patron is obliged to fell to the proprietor, at fix years pur-

14. Some teinds are more directly subject to an allocation for the minister's stipend than others. The teinds in the hands of the lay titular fall first to be allocated, who, fince he is not capable to ferve the cure in his own person, ought to provide one who can; and if the titular, in place of drawing the teind, has fet it in tack, the tack-duty is allocated: this fort is called free teind. Where the tack-duty, which is the titular's interest in the teinds, falls short, the tack itself is burdened, or, in other words, the furplus teind over and above the tack-duty: but, in this cafe, the commissioners are empowered to recompense the tacksman, by prorogating his tack for such a number of years as they shall judge equitable. Where this likewife proves deficient, the allocation falls on the teinds heritably conveyed by the titular, unless he has warranted his grant against future augmentations; in which case, the teinds of the lands belonging in property to the titular himself must be allocated in the first place.

15. Where there is fufficiency of free teinds in a parish, the titular may allocate any of them he shall think fit for the minister's stipend, fince they are all his own: unless there has been a previous decree of locality: and this holds, though the flipend should have been paid immemorially out of the teinds of certain particular lands. This right was frequently abused by titulars, who, as foon as a proprietor had brought an action of fale of his teinds, allocated the purfuer's full teind for the stipend, whereby such action became ineffectual: it was therefore provided, that after citation in a fale of teinds, it shall not be in the titular's power to allocate the purfuer's teinds folely, but only in proportion with the other teinds in the parish.

Ministers exempted

16. Ministers glebes are declared free from the payglebes, &c. ment of teind. Lands cum decimis inclusis are also exempted from teind. But in order to exempt lands from teinds from payment of teind, it is necessary that the proprietor prove his right thereto, cum decimis inclusis, as far back as the above act of annexation 1587.

17. Teinds are debita fructuum, not fundi. The action therefore for bygone teinds is only perfonal, against those who have intermeddled, unless where the titular is infeft in the lands, in fecurity of the valued teind duty. Where a tenant is, by his tack, bound to pay a joint duty to the landlord for flock and teind, without diftinguishing the rent of each, his defence of a bona fide payment of the whole to the landlord has been fustained in a fuit at the instance of a laic titular, but repelled where a churchman was purfuer. In both cases the proprietor who receives such rent is liable as intermeddler.

Inhibition

18. In tacks of teinds, as of lands, there is place for tacit relocation: to stop the effect of which, the titular must obtain and execute an inhibition of teinds against the tacksman; which differs much from inhibition of lands (explained under the next fection), and Nº 177.

The ministers planted in these, after the reformation, is intended merely to interpel or inhibit the tacksman Law of from farther intermeddling. This diligence of inhibi- Scotland. tion may also be used at the suit of the titular, against any other poffessor of the teinds; and if the tacksman or poffeffor shall intermeddle after the inhibition is executed, he is liable in a spuilzie.

10. Lands and teinds pass by different titles; a difpolition of lands, therefore, though granted by one who has also right to the teind, will not carry the teind, unless it shall appear from special circumstances that a fale of both was defigned by the parties. In lands cum decimis inclusis, where the teinds are consolidated with the flock, the right of both must necessiarily go together in all cases.

SECT. XI. Of inhibitions.

THE conflitution and transmission of feudal rights. and the burdens with which they are chargeable, being now explained, it remains to be confidered how thefa rights may be affected at the fuit of creditors by le diligence. Diligences are certain forms of law, wher by a creditor endeavours to make good his payment, either by affecting the person of his debtor, or by securing the subjects belonging to him from alienation, or by carrying the property of these subjects to him-felf. They are either real or personal. Real diligence is that which is proper to heritable or real rights; perfonal, is that by which the perfon of the debtor may be secured, or his personal estate affected. Of the first fort we have two, viz. inhibition and adjudica-

2. Inhibition is a personal prohibition, which passes schibition. by letters under the fignet, prohibiting the party inhibited to contract any debt, or do any deed, by which any part of his lands may be aliened or carried off in prejudice of the creditor inhibiting. It must be executed against the debtor, personally, or at his dwelling-house, as summonses, and thereafter published and registered in the same manner with interdictions, (fee No clxxxiii. 21.)

3. Inhibition may proceed, either upon a liquid obligation, or even on an action commenced by a creditor for making good a claim not yet fustained by the judge; which last is called inhibition upon a depending action. The fummons, which constitutes the dependence, must be executed against the debtor before the letters of inhibition pass the fignet; for no suit can be faid to depend against one till he be cited in it as a defender; but the effect of fuch inhibition is fuspended till decree be obtained in the action against the debtor; and in the fame manner, inhibitions on conditional debts have no effect till the condition be purified. Inhibitions are not granted, without a trial of the cause, when they proceed on conditional debts. And though, in other cases, inhibitions now pass of courfe, the lords are in use to stay, or recal them, either on the debtor's showing cause why the diligence should not proceed, or even en officio where the ground of the diligence is doubtful.

4. Though inhibitions, by their uniform flyle, dif- Limited to able the debtor from felling his moveable as well as heritage. his heritable estate, their effect has been long limited to heritage, from the interruption that fuch an embargo upon moveables must have given to commerce;

Law of fo that debts contracted after inhibition may be the Scotland. foundation of diligence against the debtor's person and moveable effate. An inhibition fecures the inhibitor against the alienation, not only of lands that belonged to his debtor when he was inhibited, but of those that he shall afterwards acquire: but no inhibition can extend to such after-purchases as lie in a jurisdiction where the inhibition was not registered; for it could not have extended to these though they had been made prior to the inhibition.

5. This diligence only firikes against the voluntary debts or deeds of the inhibited person: it does not reftrain him from granting necessary deeds, i. e. such as he was obliged to grant anterior to the inhibition, fince he might have been compelled to grant these before the inhibitor had acquired any right by his diligence. By this rule, a wadfetter or annualrenter might, after being inhibited, have effectually renounced his right to the reverfer on payment, because law could have compelled him to it ; but to fecure inhibiors against the effect of fuch alienations, it is declared by act of federunt of the court of fession, Feb. 19. 1680, that, after intimation of the inhibition to the reverler, no renunciation or grant of redemption shall be fuftained, except upon declarator of redemption brought by him, to which the inhibitor must be made a party.

6. An inhibition is a diligence fimply prohibitory, prohibitory fo that the debt, on which it proceeds, continues perfonal after the diligence; and confequently, the inhibitor, in a question with anterior creditors whose debts are not fluck at by the inhibition, is only preferable from the period at which his debt is made real by adjudication: and where debts are contracted on heritable fecurity, though posterior to the inhibition, the inhibitor's debt, being perfonal, cannot be ranked with them; he only draws back from the creditors ranked the fums contained in his diligence. The heir of the person inhibited is not restrained from alienation by the diligence used against his ancestor; for the prohibition is personal, affecting only the debtor against whom the diligence is used.

> 7. Inhibitions do not, of themselves, make void the posterior debts or deeds of the person inhibited; they only afford a title to the user of the diligence to fet them aside, if he finds them burtful to him: and even where a debt is actually reduced ex capite inhibitionis, fuch reduction, being founded folely in the inhibitor's interest, is profitable to him alone, and cannot alter the natural preference of the other creditors.

8. Inhibitions may be reduced upon legal nullities, inhibitions. arising either from the ground of debt or the form of diligence. When payment is made by the debtor to the inhibitor, the inhibition is faid to be purged. Any creditor, whose debt is struck at by the inhibition, may, upon making payment to the inhibitor, compel him to affign the debt and diligence in his favour, that he may make good his payment the more effectually against the common debtor.

SECT. XII. Of comprisings, adjudications, and juelxxii.

Vos. IX. Part. II.

HERITABLE rights may be carried from the debtor to the creditor, either by the diligence of apprifing (now adjudication), or by a judicial fale carried on be-Apprifing, fore the court of fession. Apprising, or comprising,

was the fentence of a sheriff, or of a messenger who was Law of specially conflituted sheriff for that purpose, by which Scotland. the heritable rights belonging to the debtor were fold for payment of the debt due to the apprifer; fo that apprilings were, by their original conflitution, proper fales of the debtor's lands to any purchafer who offered. If no purchaser could be found, the sheriff was to apprife or tax the value of the lands by an inquest (whence came the name of apprifing), and to make over to the creditor lands to the value of the debt. A full history of apprilings will be found in the beginning of Mr Erskine's large Institute under this title; it being confidered as unneceffary to enter into a deduction now no longer necessary, as by the act 1672 adjudications were substituted in their place.

2. That creditors may have access to affect the estate of their deceased debtor, though the heir should stand off from entering, it is made lawful (by 1540, c. 106.) for any creditor to charge the heir of his debtor to enter to his ancestor (year and day being past after the ancestor's death), within 40 days after the charge; and if the heir fails, the creditor may proceed to apprife his debtor's lands, as if the heir had been entered. Cuftom has fo explained this ftatute, that the creditor may charge the heir, immediately after the death of his ancestor, provided that the summons which is to be founded on the charge be not raifed till after the expiry both of the year and of the 40 days next enfuing the year, within which the heir is charged to enter. But this flatute relates only to fuch charges on which apprifing is to be led against the ancestor's lands; for, in those which are to be barely the foundation of a common fummons or process against the heir, action will be fustained if the year be clapsed from the ancestor's death before the execution of the summons, though the 40 days should not be also expired. Though the statute authorises such charges against majors only, practice has also extended it against minors, and the rule is extended to the case where the heir is the debtor. One must, in this matter, distinguish between a general and a special charge. A general charge ferves only to fix the representation of the heir who is charged, fo as to make the debt his which was formerly his anceftor's: but a special charge makes up for the want of a fervice (No clxxx. 25.); and flates the heir, fictione juris, in the right of the subjects to which he is charged to enter. Where, therefore, the heir is the debtor, a general charge for fixing the representation against him is unnecessary, fince the only concern of the creditor is, that his debtor make up titles to the ancestor's estate, which is done by a special charge: but where the deceased was the debtor, the creditor must first charge his heir to enter in general, that it may be known whether he is to represent the debtor: if he does not enter within forty days, the debt may be fixed against him by a decree of constitution; after which, the heritable rights belonging to the ancestor will fall to be attached; in doing which, the diligence to be used is different, according to the state of the titles in the ancestor's person: for if the ancestor stood vefted by infeftment, the heir must be charged to enter heir in special; but if the ancestor bad but a perfonal right to the subjects (i. e. not perfected by feifin), which would have been carried to the heir by a general fervice, then what is called a general special charge must be given to the heir. These charges, ei-

Ts fimply

Purging of

Law of ther special or general special, as the circumstances of heir, who is charged to enter, formally renounces the Law of the case may require, are by the flatute 1540 made equivalent to the heir's actual entry; and therefore an adjudication led after the inducio of the charges are elapsed, effectually carries to the creditor the subjects to which the heir was charged to enter.

Adiudications.

3. Apprifings in course of time underwent many changes in their form and effect, till at length, by act 1672, c. 19. adjudications were substituted in their place, and are carried on by way of action before the court of fession. By that statute, such part of the debtor's lauds is to be adjudged as is equivalent to the principal fum and interest of the debt, with the composition due to the superior and expences of infestment, and a fifth part more in respect the creditor is obliged to take land for his money. The debtor must deliver to the creditor a valid right of the lands to be adjudged, or transumpts thereof, renounce the possession in his favour, and ratify the decree of adjudication: and law confiders the rent of the lands as precifely commensurated to the interest of the debt; so that the adjudger lies under no obligation to account for the furplus rents. In this, which is called a special adjudication, the legal, or time within which the debtor may redeem, is declared to be five years; and the creditor attaining possession upon it can use no farther execution against the debtor, unless the lands be evicted from him.

4. Where the debtor does not produce a sufficient right to the lands, or is not willing to renounce the possession, and ratify the decree (which is the case that has most frequently happened), the statute makes it lawful for the creditor to adjudge all right belonging to the debtor in the same manner, and under the fame reversion of ten years, as he could, by the former laws, have apprifed it. In this last kind, which is called a general adjudication, the creditor must limit his claim to the principal fum, interest, and penalty, without demanding a fifth part more. But no general adjudication can be infifted on, without libelling in the fummous the other alternative of a special adjudication; for special adjudications are introduced by the flatute in the place of apprisings; and it is only where the debtor refuses to comply with the terms thereof, that the creditor can lead a general adjudication.

5. Abbreviates are ordained to be made of all adjudications, which must be recorded within 60 days after the date of the decree. In every other respect, general adjudications have the same effects that apprifings had; adjudgers in possession are accountable for the furplus rents; a citation in adjudications renders the fubject litigious; fuperiors are obliged to enter adjudgers; the legal of adjudications does not expire during the debtor's minority, &c. Only it may be obferved, that though apprifings could not proceed before the term of payment, yet where the debtor is vergens ad inopiam, the court ex nobili officio admit adjudication for the debt before it be payable. But this fort being founded folely in equity, fublitts merely as a fecurity, and cannot carry the property to the creditor by the lapfe of any length of time.

6. There are two kinds of adjudication, which took place at the fame time with apprifings, and fill ob-Two kinds tain ; viz. adjudications on a decree cognitionis caufa, of adjudica- otherwise called contra hereditatem jacentem; and actjugions. dications in implement. Where the debtor's apparent

fuccession, the creditor may obtain a decree cognitionis Scotland caufa; in which, though the heir renouncing is cited for the fake of form, no fentence condemnatory can be pronounced against him, in respect of his renunciation; the only effect of it is to subject the bereditas ja-

W.

cens to the creditor's diligence. 7. Adjudications contra bereditatem jacentem, carry not only the lands themselves that belonged to the deceased, but the rents thereof fallen due fince his death: for thefe, as an acceffory to the effate belonging to the deceased, would have descended to the heir if he had entered, which rule is applied to all adjudications led on a special charge. This fort of adjudication is declared redeemable within feven years, by any co-adjudging creditor, either of the deceafed debtor or of the heir resouncing. The heir himself, who renounces, cannot be reftored against his renunciation, nor confequently redeem, if he be not a minor. But even a major may redeem indirectly, by granting a fimulate bond to a confident person; the adjudication upon which, when conveyed to himself, is a good title to redeem all other adjudications against the lands belonging to his ancestor.

8. Adjudications in implement are deduced against those who have granted deeds without procuratory of refignation or precept of feifin, and refuse to divest themselves; to the end that the subject conveyed may beeffectually vested in the grantee. These adjudications may be also directed against the heir of the granter, upon a charge to enter. Here there is no place for a legal reversion; for, as the adjudication is led for completing the right of a special subject, it must carry that subject as irredeemably as if the right had been

voluntarily completed.

9. All adjudications led within year and day of that one which has been made first effectual by feifin (where feifin is neceffary), or exact diligence for obtaining feifin, are preferable pari paffu. The year and day runs from the date of the adjudication, and not of the feifin or diligence, for obtaining it. After the days of that period, they are preferable according to their dates. All the co-adjudgers within the year are preferable pari passu, as if one adjudication had been led for all their debts. This makes the feifin or diligence on the first adjudication a common right to the rest. who must therefore refund to the owner of that diligence his whole expence laid out in carrying on and completing it. And though that first adjudication should be redeemed, the diligence upon it still subfifts" as to the reft. This pari paffu preference, however, does not destroy the legal preference of adjudications led on debita fundi (fee No clxix. 15.); nor does it take place in adjudications in implement.

A new fort of adjudication has been lately introduced into the law of Scotland by the act of the 23d Geo. III. for rendering the payment of the creditors of infolvent debtors more equal and expeditious. Among the many other provisos in that flatute for expediting the payment of creditors, and leffening the expence of diligence against the debtor's estate, it is enacted, That upon an order from the court of fession ? or lord ordinary, the bankrupt shall be bound to execute a disposition or dispositions, making over to the trustee or trustees chosen by the creditors the whole estate real and personal, wherever fituated; and in case

Sequestra-

tion.

Law of of the bankrupt's refusal, or of the order not being complied with from any other reason, the court or the lord ordinary shall, upon the application of the trustee. iffue an act or decree, adjudging the property of the whole fequestrated estate to be in the trustee for behoof of the creditors; which shall have the same effect as if the bankrupt had executed the conveyance; and by a fubfequent clause in the flatute, it is enacted, that this difposition of the heritable estate, together with the order of the court or lord ordinary on which it proceeds, or, failing thereof, the decree of adjudication of the court or the lord ordinary, shall within 60 days of the date thereof be registered in the register of abbreviates of adjudications; and shall have the effect to intitle the truffee for behoof of the whole creditors to rank in the fame manner upon the heritable effate as if it had been a proper decree of adjudication, obtained at the date of the interlocutor awarding the fequeftration; accumulating the whole debts, principal and interest, as at that period, and adjudging for security or payment thereof, fo as to rank pari paffu with any prior effectual adjudication, and within year and day of the same. By this act also, in order to lessen the number of adjudications, and confequently the expence upon a hankrupt estate, it is declared, that intimation shall be made of the first adjudication which is called. fo as all creditors who are in readiness may, within fuch a reasonable time as may be allowed, not exceed. ing twenty federunt days, produce their grounds of debt, and be conjoined in the decree to follow on faid first adjudication. At the same time it may be proper to mention, that this act is only temporary; and after eight years experience, will probably fuffer very confiderable alterations, when it shall become necessary to digest another bankrupt law for Scotland.

10. Before treating of judicial fales of bankrupts estates, the nature of fequesiration may be shortly explained, which is a diligence that generally where in actions of fale. Sequestration of lands is a judicial act of the court of fession, whereby the management of an effate is put into the hands of a factor or fleward named by the court, who gives fecurity, and is to be accountable for the rents to all having interest. This diligence is competent, either where the right of the lands is doubtful, if it be applied for before either of the competitors has attained possession, or where the estate is heavily charged with debts: but, as it is an unfavourable diligence, it is not admitted, unless that meafure shall appear necessary for the security of creditors. Subjects not brought before the court by the diligence of creditors, cannot fall under fequestration; for it is the competition of creditors which alone founds the jurifdiction of the court to take the disputed subject into their possession.

11. The court of fession who decrees the sequestration has the nomination of the factor, in which they are directed by the recommendation of the creditors. tor had not been infeft in the lands, has a power to re- ted their rights, as if that decree had proceeded upon move tenants. Judicial factors muft, within fix months an action of reduction improbation. See No claxxiii. 3. charge against themselves, and a note of such altera cause to delay the sale. The irredeemable property of tions in the rental as may afterwards happen; and must the lands is adjudged by the court to the highest of-

alfo deliver to the clerk annually a scheme of their ac- Law of counts, charge and discharge, under beavy penalties. They are, by the nature of their office, bound to the fame degree of diligence that a prudent man adhibits in his own affairs: they are accountable for the interest of the rents, which they either have, or by diligence might have recovered, from a year after their falling due. As it is much in the power of those factors to take advantage of the necessities of creditors, by purchasing their debts at an undervalue, all such purchases made either by the factor himself, or to his behoof, are declared equivalent to an acquittance or extinction of the debt. No factor can warrantably pay to any creditor, without an order of the court of feffion; for he is, by the tenor of his commission, directed to pay the rents to those who shall be found to have the best right to them. Judicial factors are intitled to a falary, which is generally stated at five per cent. of their intromissions; but it is feldom afcertained till their office expires, or till their accounting; that the court may modify a greater or finaller falary, or none, in proportion to the factor's integrity and diligence. Many cases occur, where the court of fession. without fequefration, name a factor to preferve the rents from perifhing; e. g. where an heir is deliberating whether to enter, where a minor is without tutors, where a fuccession opens to a person residing abroad; in all which cases the factor is subjected to the rules laid down in act of federunt, Feb. 12, 1720.

As to fequestrations under the bankrupt act before recited, the reader must necessarily be referred to the act itself; for being only temporary, as before mentioned, it feems quite inconfiftent with the plan of this work to enter into a minute detail of the different regulations thereby laid down in cases of sequestration under it.

12. The word bankrupt is fometimes applied to per- Sale of fons whose funds are not sufficient for their debts; and bankrupt fometimes, not to the debtor, but to his estate. The chates. court of feffion are empowered, at the fuit of any real creditor, to try the value of a bankrupt's estate, and fell it for the payment of his debts.

13. No process of sale, at the suit of a creditor, can proceed without a proof of the debtor's bankruptcy, or at least that his lands are so charged with debts that no prudent perfons will buy from him; and therefore the fummons of fale muit comprehend the debtor's whole estate. The debtor, or his apparent heir, and all the real creditors in possession, must be made parties to the fuit : but it is sufficient if the other creditors be called by an edictal citation. The fummons of fale contains a conclusion of ranking or preference of the bankrupt's creditors. In this ranking, first and fe- Ranking of cond terms are affigned to the whole creditors for exhi-creditors

biting in court (or producing) their rights and diligences; and the decree of certification proceeding thereupon, against the writings not produced, has the A factor appointed by the fession, though the proprie- fame effect in favour of the creditors who have produafter extracting their factory, make up a rental of the By the late bankrupt act, the fale may precede the estate, and a lift of the arrears due by tenants, to be ranking of the creditors, unless the court, upon applicaput into the hands of the clerk of the process, as a tion of the creditors, or any of them, shall find sufficient

Law of ferer at the fale. The creditors receiving payment Scotland. must grant to the purchaser absolute warrandice, to the extent of the fum received by them; and the lands purchased are declared disburdened of all debts or deeds of the bankrupt, or his ancestors, either on payment of the price by the purchaser to the creditors according to their preference, or on confignation of it. By the act 1695, purchasers were bound to confign the price in the hands of the magistrates of Edinburgh; but by 65. of the above act, they may confign it in the royal bank or bank of Scotland. The only remedy provided to fuch creditors as judge themselves hurt by the fale or division of the price, even though they should be minors, is an action for recovering their share of the price against the creditors who have received it.

> 14. The expence of these processes is debursed by the factor out of the rents in his hands; by which the whole burden of fuch expence falls upon the posterior

creditors.

15. Apparent heirs are intitled to bring actions of fale of the effates belonging to their ancestors, whether bankrupt or not; the expence of which ought to fall upon the purfuer, if there is any excrefcence of the price, after payment of the creditors; but if there be no excrescence, the creditors, who alone are gainers by the fale, ought to bear the charge of it.

16. As processes of ranking and sale are defigned for the common interest of all the creditors, no diligence carried on or completed during their pendency ought to give any preference in the competition; pen-

dente lite, nibil innovandum.

17. It is a rule in all real diligences, that where a creditor is preferable on feveral different subjects, he cannot use his preference arbitrarily, by favouring one creditor more than another; but must allocate his univerfal or catholic debt proportionally against all the fubjects or parties whom it affects. If it is material to fuch creditor to draw his whole payment out of any one fund, he may apply his debt fo as may beit fecure himfelf: but that inequality will be rectified as to the posterior creditors, who had likewife, by their rights and diligences, affected the fubjects out of which he drew his payment, by obliging him to affign in their favour his right upon the separate subjects which he did not use in the ranking; by which they may recur against these separate subjects for the shares which the debt preferred might have drawn out of them. As the obligation to affign is founded merely in equity, the catholic creditor cannot be compelled to it, if his affigning shall weaken the preference of any separate debt vefted in himfelf, affecting the special subject fought to be affigued. But if a creditor upon a special subject shall acquire from another a catholic right, or a catholic creditor shall purchase a debt affecting a special subject, with a view of creating to the special debt a higher degree of preference than was naturally due to it. by an arbitrary application of the catholic debt, equity cannot protect him from affigning in favour of the creditor excluded by fuch application, especially if, prior to the purchase, the subject has become litigious by the process of ranking.

II. MOVEABLE RIGHTS.

THE law of heritable rights being explained, Move-

able Rights fall next to be confidered; the doctrine of I.aw of which depends chiefly on the nature of Obligations.

SECT. XIII. Of obligations and contracts in ge- claxiii. neral.

An obligation is a legal tie, by which one is bound Obligations to pay or perform fomething to another. Every obligation on the perfon obliged implies an opposite right in the creditor, fo that what is a burden in regard to the one is right with respect to the other; and all rights founded on obligation are called personal. There is this effential difference between a real and a personal right, that a jus in re, whether of property, or of an inferior kind, as fervitude, intitles the person vested with it to possess the subject as e is own; or if he is not in possession, to demand it from the possessions: whereas the creditor in a personal right has only jus ad rem, or a right to compel the debtor to fulfil his obligation; without any right in the fubject itself, which the debtor is bound to transfer to him. One cannot oblige himself, but by a prefent act of the will. A bare resolution, therefore, or purpose, to be obliged, is alterable. at pleafure.

2. Obligations are either, (1.) Merely natural, where Division of one person is bound to another by the law of nature, obligations but cannot be compelled by any civil action to the per-

formance. Thus, though deeds granted by a minor having curators, without their confent, are null, yet the minor is naturally obliged to perform such deeds; and parents are naturally obliged to provide their children in reasonable patrimonies. Natural obligations intitle the creditor to retain what he has got in virtue thereof, without being subjected to restore it. (2.) Obligations are merely civil, which may be fued upon by an action, but are elided by an exception in equity; this is the case of obligations granted through force or fear, &c. (3.) Proper or full obligations, are those which are supported both by equity and the civil fanction.

3. Obligations may be also divided into, (1.) Pure, to which neither day nor condition is adjected. These may be exacted immediately. (2.) Obligations (ex die), which have a day adjected to their performance. In these, dies statim cedit, sed non venit; a proper debt arifes from the date of the obligation, because it is certain that the day will exift; but the execution is fufpended till the lapse of that day. (3.) Conditional obligations; in which there is no proper debt (dies none cedit) till the condition be purified, because it is posfible the condition may never exist; and which therefore are faid to create only the hope of a debt; but the granter, even of these, has no right to resile. An obligation, to which a day is adjected that poffibly may never exist, implies a condition; dies incertus pro conditione habetur. Thus, in the case of a provision to a child, payable when he attains to the age of fourteen, if the child dies before that age, the provision falls.

4. Obligations, when confidered with regard to their cause, were divided by the Romans, into those arising from contract, quasi contract, delict, and quasi delict: but there are certain obligations, even full and proper ones, which cannot be derived from any of these sources, and to which Lord Stair gives the name of obediential. Such as the obligation on parents to aliment or maintain their children; which arises singly from the rela-

Law of tion of parent and child, and may be enforced by the Scotland. civil magistrate. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their iffue in all the necessaries of life, and giving them fuitable education. It ceases, when the children can earn a livelihood by their own industry; but the obligation on parents to maintain their indigent children, and reciprocally on children to maintain their indigent parents, is perpetual. This obligation is, on the father's death, transferred to the eldelt fon, the heir of the family; who, as representing the father, must aliment his younger brothers and fisters : the brothers are only intitled to alimony, till their age of twenty-one, after which they are prefumed able to do for themselves; but the obligation to maintain the fifters continues till their marriage. In persons of lower rank, the obligation to aliment the fifters ceafes after they are capable of fubfifting by any fervice or employ-

> 5. All obligations, arising from the natural duty of restitution, fall under this class; thus, things given upon the view of a certain event, must be restored, if that event does not afterwards exitt; thus also, things given ob turpem caufam, where the turpicude is in the receiver and not in the giver, must be restored. And on the fame principle, one upon whose ground a house is built or repaired by another, is obliged, without any covenant, to restore the expence laid out upon it, in fo

far as it has been profitable to him.

6. A contract is the voluntary agreement of two or more persons, whereby fomething is to be given or performed upon one part, for a valuable confideration, either prefent or future, on the other part. Confent, which is implied in agreement, is excluded, (1.) By error in the effentials of the contract; for, in fuch case, the party does not properly contract, but errs or is deceived; and this may be also applied to contracts which take their rife from fraud or impolition. (2.) Confent is excluded by fuch a degree of restraint upon any of the contracting parties, as extorts the agreement; for where violence or threatening are used against a person, his will has really no part in the contract.

7. Loan, or mutuum, is that contract which obliges a perfon, who has borrowed any fungible subject from another, to reftore to him as much of the same kind, and of equal goodness. Whatever receives its estimation in number, weight, or meafure, is a fungible; as corn, wine, current coin, &c. The only proper fubjects of this contract are things which cannot be used without either their extinction or alienation: hence the property of the thing lent is necessarily transferred by delivery to the borrower, who confequently must run all the hazards either of its deterioration or its perishing, according to the rule, res perit fuo domino. Where the borrower neglects to restore at the time and place agreed on, the estimation of the thing lent must be made according to its price at that time and in that place; because it would have been worth so much to the lender, if the obligation had been duly performed. If there is no place nor time flipulated for, the value is to be flated according to the price that the commodity gave when and where it was demanded. In the loan of money, the value put on it by public authority, and not its intrinsic worth, is to be considered, This contract is one of those called by the Romans Lawof unilateral, being obligatory only on one part; for the Scotland lender is subjected to no obligation: the only action therefore that it produces, is pointed against the borrower, that he may reftore as much in quantity and quality as he borrowed, together with the damage the lender may have fuffered through default of due performance.

8. Commodate is a species of loan, gratuitous on the Commo part of the lender, where the thing lent may be used, date. without either its perifhing or its alienation. Hence, in this fort of loan, the property continues with the lender: the only right the borrower acquires in the fubject is its use, after which he must restore the individual thing that he borrowed: confequently, if the subject perithes, it perishes to the lender, unless it has perished by the borrower's fault. What degree of fault or negligence makes either of the contracting parties liable to the other in damages, is comprehended under the following rules. Where the contract gives a mutual benefit to both parties, each contractor is bound to adhibit a middle fort of diligence, fuch as a man of ordinary prudence uses in his affairs. Where only one of the parties has benefit by the contract, that party must use exact diligence; and the other who has no advantage by it, is accountable only for dole, or for gross omissions, which the law contrues to be dole-Where one employs less care on the subject of any contract which implies an exuberant truft, than he is known to employ in his own affairs, it is confidered as dole.

9. Hence it will appear that this is a bilateral contract; the borrower must be exactly careful of the thing lent, and reftore it at the time fixed by the contract, or after that use is made of it for which it was lent: if he puts it to any other use, or neglects to reftore it at the time covenanted, and if the thing perishes thereafter, even by mere accident, he is bound to pay the value. On the other part, the lender is obliged to reftore to the borrower fuch of the expenses deburfed by him on that fubject as arofe from any uncommon accident, but not those that naturally attend the use of it. Where a thing is lent gratuitously, without specifying any time of redelivery, it constitutes the contract of precarium, which is revocable at the lender's pleafure, and, being entered into from a perfonal regard to the borrower, ceases by his death.

10. Depositation is also a bilateral contract, by which Deposite one who has the cultody of a thing committed to him tion. (the depositary) is obliged to restore it to the depositor. If a reward is bargained for by the depositary for his care, it refolves into the contract of location. As this contract is gratuitous, the depositary is only answerable for the consequences of gross neglect; but after the deposit is redemanded, he is accountable even for cafual misfortunes. He is intitled to a full indemnification for the losses he has fullained by the contract. and to the recovery of all fums expended by him on the

11. An obligation arises without formal paction, Naute, caubarely by a traveller's entering into an inn, thip, or pones, flaborflable, and there depositing his goods, or putting up larii. his horfes; whereby the innkeeper, flipmatter, or itabler, is accountable, not only for his own facts and those of his fervants (which is an obligation implied in the very exercise of these employments), but of the other guefts or paffengers; and, indeed, in every cafe, unlefs

Law of Scotland.

where the goods have been loft damno fatali, or carried off by pirates or house-breakers. Not only the masters of thips, but their employers, are liable each of them for the share that he has in the ship; but by the prefent custom of trading nations, the goods brought into a thip must have been delivered to the master or mate, or entered into the ship-books. Carriers fall within the intendment of this law; and practice has extended it to vintners within borough. The extent of the damage fultained by the party may be proved by his own nath in litem. 12. Sequefiration, whether voluntarily confented to

by the parties, or authorised by the judge, is a kind of

Sequeftration.

deposit; but as the office of fequestree, to whose care the subject in dispute is committed, is not considered as gratuitous, he cannot throw it up at pleasure, as a common depositary may do; and he is liable in the middle degree of diligence. Confignation of money is Confignaalso a deposit. It may be made, either where the debt is called in question by the debtor, as in sufpensions; or where the creditor refuses to receive his money, as in wadfets, &c. The rifk of the configned money lies on the configuer, where he ought to have made payment, and not confignation; or has configned only a part; or has chosen for confignatory, a person neither" named by the parties nor of good credit. The charger, or other creditor, runs the rifk, if he has charged for fums not due, or has without good reason refused payment, by which refusal the confignation became neceffary. It is the office of a confignatory, to keep the money in fafe custody till it be called for: if therefore he puts it out at interest, he must rum the hazard of the debtor's infolvency; but, for the fame reason, though he should draw interest for it, he is liable in none to the

Pledge.

by which a debtor puts into the hands of his creditor a special moveable subject in security of the debt, to be redelivered on payment. Where a fecurity is established by law to the creditor, upon a fubject which continues in the debtor's poffession, it has the special name Hypothec. of an hypothec. Tradefmen and ship-carpenters have an hypothec on the house or thip repaired, for the materials and other charges of reparation; but not for the expence of building a new ship. This, however, must not now be understood to apply universally; for the court of fession, in different cases which lately occurred before them, and founding upon the law and practice of England in fimilar cases, have found, that no hypothec exitts for the expence of repairs done in a home port. Owners of thips have an hypothec on the cargo for the freight; heritors on the fruits of the ground; and landlords on the investa et illata, for their rents. Writers also, and agents, have a right of hypothec, or more properly of retention, in their con-Aituent's writings, for their claim of pains and deburfements. A creditor cannot, for his own payment, fell the subject impignorated, without applying to the judge-ordinary for a warrant to put it up to public fale or roup; and to this application the debtor ought to be made a party.

13. Pledge, when opposed to wadset, is a contract,

SECT. XIV. Of Obligations by word or writ.

clxxiv-Werbal The appellation of verbal may be applied to all agreement.

obligations to the conflitution of which writing is not effential, which includes both real and confentual contracts; but as these are explained under separate titles, obligations by word, in the fense of this rubric, must be reftricted, either to promifes, or to fuch verbal agreements as have no fpecial name to diffinguish them. Agreement implies, the intervention of two different parties, who come under mutual obligations to one another. Where nothing is to be given or performed but on one part, it is properly called a promife : which, as it is gratuitous, does not require the acceptance of him to whom the promise is made. An offer, which must be distinguished from a promise, implies something to be done by the other party; and confequently is not binding on the offerer, till it be accepted, with its limitations or conditions, by him to whom the offer is made; after which, it becomes a proper agreement.

2. Writing must necessarily intervene in all obliga- Writings. tions and bargains concerning heritable fubjects, tho' they should be only temporary; as tacks, which, when they are verbal, last but for one year. In these, no verbal agreement is binding, though it should be referred to the oath of the party; for, till writing is adhibited, law gives both parties a right to refile, as from an unfinished bargain; which is called locus panitentia. If, upon a verbal bargain of lands, part of the price shall be paid by him who was to purchase, the interventus rei, the actual payment of money, creates a valid obligation, and gives a beginning to the contract of fale : and, in general, where-ever matters are no longer entire, the right to refile feems to be excluded. An agreement, whereby a real right is paffed from, or reftricted, called pactum liberatorium, may be perfected verbally; for freedom is favourable, and the purpose of fuch agreement is rather to diffolve than to create an obligation. Writing is also effential to bargains made under condition that they shall be reduced into writing; for in fuch cases, it is pars contractus, that, till writing be adhibited, both parties shall have liberty to withdraw. In the same manner, verbal or nuncupative testaments are rejected by our law; but verbal legacies are fuftained, where they do not exceed L. 100 Scots.

3. Anciently, when writing was little used, deeds Solemnities were executed by the party, appending his feal to them of written in presence of witnesses. For preventing frauds that obligations might happen by appending feals to falle deeds, the subscription also of the granter was afterwards required, and, if he could not write, that of a notary. As it might be of dangerous confequences to give full force to the subscription of the parties by initials, which is more eafily counterfeited; our practice, in order to fuftain fuch fubscription, feems to require a proof, not only that the granter used to subscribe in that way, but that de facto he had subscribed the deed in question : at least, such proof is required, if the instrumentary witnesses be still alive.

4. As a further check, it was afterwards provided. that all writings carrying any heritable right, and other deeds of importance, be subscribed by the principal parties, if they can subscribe; otherwise, by two notaries, before four witnesses specially designed. The subfequent practice extended this requifite of the defigna. tion of the witnesses to the case where the parties thomfelves subscribed. Custom has construed obligations for

fums

portance. In a divisible obligation, en. gr. for a sum of money, though exceeding L. 100, the subscription of one notary is sufficient, if the creditor restricts his claim to L 100: But in an obligation indivisible, e.g. for the performance of a fact, if it be not subscribed in terms of the statute, it is void. When notaries thusattest a deed, the attestation or decouet must specially express that the granter gave them a mandate to fign ; nor is it sufficient that this be mentioned in the body

5. In every deed, the name of him who writes it. with his dwelling place, or other mark of diffinction, must be inferted. The witnesses must both subscribe as witnesses, and their names and defignations be inferted in the body of the deed: And all fubscribing witnesses must know the granter, and either see himfubscribe, or hear him acknowledge his subscription; otherwise they are declared punishable as accessivy to forgery. Deeds, decrees, and other fecurities, confifting of more than one fleet, may be written by way of book, in place of the former cultom of patting together the feveral sheets, and figning the joinings on the margin; provided each page be figured by the granter, and marked by its number, and the tefting

claufe express the number of pages.

6. Instruments of seifin are valid, if subscribed by of notorial one notary, before a reasonable number of witnesses; aftruments which is extended by practice to infruments of refignation. Two witnesses are deemed a reasonable number to every deed that can be executed by one notary. It is not necessary that the witnesses to a notorial infirument or execution fee the notary or meffenger fign ; for they are called as witnesses to the transaction which is attested, and not to the subscription of the person attefting.

7. A new requifite has been added to certain deeds fince the union, for the benefit of the revenue : They must be executed on stamped paper, or parchment, paying a certain duty to the crown These duties must all be paid before wrote upon, under a penalty; but they are fo numerous and complex, that it would be tedious, even if it fell under our plan, to enter into an enumeration of them. They will be found at length in Swinton's Abridgement, voce Stamps, to which the reader is referred. Certain judicial deeds, fuch as bail-bonds, bonds of cautionry, in fuspenfions, &c. are excepted, and do not require framps, as will be feen from the feveral acts referred to by the compiler of the above abridgement of the statutes.

8. The granter's name and defignation are effential, not properly as folemuities, but because no writing can have effect without them. Bonds were, by our an cient practice, frequently executed without filling up the creditor's name; and they passed from hand to hand, like notes payable to the bearer: But as there was no method for the creditor of a perfor possessed of these to fecure them for his payment, all writings taken blank in the creditor's name are declared null, as covers to fraud; with the exception of inderfacions of bills of

exchange,

onds

9. Certain privileged writings do not require the ordinary folemnities. 1. Holograph deeds (written by the granter himfelf) are effectual without witneffes. The date of no holograph writing, except a bill of ex-

Law of fums exceeding L. 100 Scots, to be obligations of im- change (fee next parag.), can be proved by the granter's Law of own affertion, in prejudice either of his heir or his Scotland. creditors, but must be supported by other adminicles. 2. Testaments, if executed where men of skill and businefs cannot be had, are valid though they should not be quite formal: and let the subject of a testament be ever to valuable, one notary figning for the tellator, before two witnesses, is in practice sufficient. Clergymen were frequently notaries before the reformation : and, though they were afterwards prohibited to act as notaries, the cale of teltaments is excepted; for that these are supported by the attestation of one minister, with two witnesses. 3. Discharges to tenants are suftained without witnesses, from their preformed ruiticity. or ignorance in bufinels. 4. Milhve letters in re mercutoria, commissions, and fitted accounts in the course or trade, and bills of exchange, though they are not holograph, are, from the favour of commerce, fustained without the ordinary folemnities.

10. A bill of exchange is an obligation in the form Bil's of exof a mandate, whereby the drawer or mandant defires change, him to whom it is directed, to pay a certain fum, at the day and place therein mentioned, to a third party. bills of exchange are grawn by a perion in one country to his correspondent in another; and they have that name, because it is the exchange, or the value of money in one place compared with its value in another, that generally determines the precise extent of the fum contained in the draught. The creditor in the bill is foractimes called the poffesior, or porteur. As parties to bills are of different countries, queitions concerning them ought to be determined by the received cuttom of trading nations, unless where special statute interposes, For this reason, bills of exchange, though their form admits not of witnesses, yet prove their own dates, inqueltions either with the heir or creditors of the debtor; but this doctrine is not extended to inland bills payable to the drawer himfelf.

11. A bill is valid, without the delignation either Their foof the drawer or of the person to whom it is madelemnities payable: It is enough, that the drawer's subscription and obliappears to be truly his; and one's being poffessor of a gations. bill marks him out to be the creditor, if he bears the name given in the bill to the creditor: Nay, though the perion drawn on should not be deligned, his acceptance prefumes that it was he whom the drawer had in his eye. Bills drawn blank, in the creditor's name, fall nuder the statutory nullity; for though indorfations. of balls are excepted from it, bills themselves are not-Not only the person drawn upon must tign his acceptance, but the drawer must fign his draught, before any obligation can be formed against the accepter : Yet. it is f sincient in practice, that the drawer figns before. the bill be produced in judgment; though it should be after the death both of the creditor and accepter. A creditor in a bill may transmit it to another by indorfation, though the bill thould not bear to his order; by the tame rule that other rights are transmilliole by affiguation, though they do not bear to affigures.

12. The drawer, by figning his draught, becomes Obligations hable for the value to the creditor in the bill, in cafe the perion drawn upon either does not accept, or after acceptance does not pay; for he is prefumed to have reecoved value from the creditor at giving him the draught, though it thould not bear for value received : But, if

Law of

the drawer was debtor to the creditor in the bill before the draught, the bill is prefumed to be given towards payment of the debt, unless it expressly bears for value. The person drawn upon, if he refuse to accept, while he has the drawer's money in his hands, is liable to him in damages. As a bill prefumes value from the creditor, indorfation prefumes value from the indorfee; who therefore, if he cannot obtain payment from the accepter, has recourse against the indorfer, unless the bill be indorfed in these words, without recourse.

13. Payment of a bill, by the accepter, acquits both the drawer and him at the hands of the creditor : but it intitles the accepter, if he was not the drawer's debtor, to an action of recourse against him; and, if he was, to a ground of compensation. Where the bill does not bear value in the hands of the person drawn upon, it is prefumed that he is not the drawer's debtor, and confequently he has recourse against the drawer,

ex mandato.

14. Bills, when indorfed, are confidered as fo many bags of money delivered to the onerous indorfee; which therefore carry right to the contents, free of all burdens that do not appear on the bills themselves. Hence, a receipt or discharge, by the original creditor, if granted on a separate paper, does not exempt the accepter from fecond payment to the indorfee; hence, alfo, no ground of compensation competent to the accepter against the original creditor can be pleaded against the indorfee : but, if the debtor shall prove, by the oath of the indorfee, either that the bill is indorfed to him for the indorfer's own behoof, or that he paid not the full value for the indorfation, the indorfee is justly confidered as but a name; and therefore all exceptions, receivable against the original creditor, will be fustained against him. A protested bill, after registration, cannot be transmitted by indorsation, but by assigna-

Wegociawion.

Days of

Prace.

15. Bills must be negociated by the possessor, against the perfon drawn upon, within a precise time, in order to preferve recourfe against the drawer. In bills payable fo many days after fight, the creditor has a difcretionary power of fixing the payment fomewhat fooner or later, as his occasions shall require. Bills payable on a day certain, need not be prefented for acceptance till the day of payment, because that day can neither be prolonged nor shortened by the time of acceptance. For the same reason, the acceptance of bills, payable on a precise day, need not be dated : but, where a bill is drawn payable fo many days after fight, it must; because there the term of payment depends on

the date of acceptance. 16. Though bills are, in firict law, due the very day on which they are made payable, and may therefore be protested on the day thereafter; yet there are three days immediately following the day of payment, called days of grace, within any of which the creditor may protest the bill: but if he delay protesting till the day after the last day of grace, he loses his recourse. Where a bill is protefted, either for not acceptance or not payment, the dishonour must be notified to the drawer or indorfer, within three posts at farthest. This strictness of negociation is confined to such bills as may be protested by the possession upon the third day of grace : where, therefore, bills are indorfed after the days of

grace are expired, the indorfee is left more at liberty, and does not lose his recourse, tho' he should not take a formal protest for not payment, if, within a reasonable time, he shall give the indorfer notice of the accepter's refuling to pay. Not only does the poffesfor, who neglects first negociation, lofe his recourse against the drawer, where the person drawn upon becomes afterwards bankrupt ; but tho' he should continue solvent : for he may in that case recover payment from the debtor, and fo is not to be indulged in an unneceffary process against the drawer, which he has tacitly re-nounced by his negligence. Recourse is preserved against the drawer, though the bill should not be duly negociated, if the perfon drawn upon was not his debtor; for there the drawer can qualify no prejudice by the neglect of diligence, and he ought not to have drawn on one who owed him nothing.

17. The privileges superadded to bills by statute are, Privileges that though, by their form, they can have no claufe of of bills by registration, yet, if duly protested, they are registrable statute. within fix months after their date in cafe of not acceptance, or in fix months after the term of payment in the case of not payment; which registration is made the foundation of fummary diligence, either against the drawer or indorfer in the cafe of not acceptance, or against the accepter in the case of not payment. This is extended to inland bills, i. e. bills both drawn and inland bills made payable in Scotland. After acceptance, fummary diligence lies against no other than the accepter ;

the drawer and indorfer must be pursued by an ordinary action. It is only the principal fum in the bill, and interest, that can be charged for summarily : the exchange, when it is not included in the draught, the re-exchange incurred by fuffering the bill to be protefted and returned, and the expence of diligence, must all be recovered by an ordinary action; because these are not liquid debts, and so must be previously constituted.

18. Bills, when drawn payable at any confiderable Certain distance of time after date, are denied the privileges of bills not bills; for bills are intended for currency, and not to privileged lie as a security in the creditor's hands. Bills are not valid which appear ex facie to be donations. No extrinuc flipulation ought to be contained in a bill which deviates from the proper nature of bills : hence, a bill

to which a penalty is adjected, or with a clause of in-terest from the date, is null. Inland precepts drawn, not for money the medium of trade, but for fungibles, are null, as wanting writer's name and witnefles. It is not an agreed point whether promissory notes, without writer and witnesses, unless holograph, are probative.

19. So flood the law of Scotland, in regard to bills and Late alterpromiffory notes, previous to the flatute 12 Geo. III. ations as t By that statute, however, the law of Scotland has bills and undergone very material alterations. They are de-notes. clared to have the fame privileges, and to preferibe in fix years after the term of payment. Bank notes and post bills are excepted from this prescription : nor does it run during the years of the creditor's minority. Inland bills and promiffory notes must be protested within the days of grace, to secure recourse; and the dishonour notified within 14 days after the protest. Summary diligence may pals not only against the acceptor, but likewise against the drawer, and all the indorfees jointly and feverally; and at the instance of any in-

dorfee

Scotland.

Law of dorfee, though the bill was not protested in his name, upon his producing a receipt or letter from the protesting indorfee. This act was in force only for feven years after 15th May 1772, and to the end of the then next session of parliament. But as it was found by experience, that it had been of great advantage to Scotland, it was made perpetual by the late act 23 Geo. III. fo that it has now become a permanent part of the law of Scotland.

20. As for the folemnities effential to deeds figned in a foreign country, when they come to receive execution in Scotland, it is a general rule, that no laws can be of authority beyond the dominions of the law-Solemnities giver. Hence, in strictness, no deed, though perfected according to the law of the place where it is figned, can have effect in another country where different folemnities are required to a deed of that fort. But this country. rigour is fo foftened ex comitate, by the common confent of nations, that all personal obligations granted according to the law of that country where they are figned, are effectual every where; which obtains in obligations to convey heritage. Conveyances themfelves, however, of heritable subjects, must be perfected according to the law of the country where the heritage lies, and from which it cannot be removed.

Delivery and depofi decds.

21. A writing, while the granter keeps it under his own power or his doer's, has no force; it becomes obligatory, only after it is delivered to the grantce himfelf, or found in the hands of a third perfor. As to which last, the following rules are observed. A deed found in the hands of one who is doer both for the granter and grantee, is prefumed to have been put in his hands as doer for the grantee. The prefumption is also for delivery, if the deed appears in the hands of one who is a stranger to both. Where a deed is depofited in the hands of a third person, the terms of depositation may be proved by the oath of the depositary, unless where they are reduced into writing. A deed appearing in the custody of the grantee himself, is confidered as his absolute right; in so much that the granter is not allowed to prove that is was granted in trust, otherwise than by a written declaration figned by the truffee, or by his oath.

What deeds effectual livery.

22. The following deeds are effectual without delivery. (1.) Writings containing a clause dispensing without de-with the delivery ; these are of the nature of revocable deeds, where the death of the granter is equivalent to delivery, because after death there can be no revocation. (2.) Deeds in favour of children, even natural ones; for parents are the proper custodiars or keepers of their childrens writings. From a fimilar reason, postnuptial fettlements by the husband to the wife need no delivery. (3.) Rights which are not to take effect till the granter's death, or even where he referves an interest to himself during his life; for it is presumed be holds the cuftody of these, merely to secure to himself fuch referved interest. (4.) Deeds which the granter lay under an antecedent natural obligation to execute, e.g. rights granted to a cautioner for his relief. (5.) Mutual obligations, e. g. contracts; for every fuch deed, the moment it is executed, is a common evident to all the parties contractors. Lastly, the publication of a writing by registration, is equivalent to delivery.

SECT. XV. Of obligations and contracts arifing from confent, and of accessory obligations.

Scotland.

CONTRACTS confenfual, (i. e. which might, by the Confenfual Roman law, be perfected by fole confent, without the contracteintervention either of things or of writing,) are fale, permutation, location, fociety, and mandate. Where the fubiect of any of these contracts is heritable, writing is necessary.

2. Sale is a contract, by which one becomes obliged Saleto give fomething to another, in confideration of a certain price in current money to be paid for it. Things confifting merely in hope, may be the subject of this contract, as the draught of a net. Commodities, where their importation or use is absolutely prohibited, cannot be the fubiect of fale; and even in run goods, no action lies against the vender for not delivery, if the buyer knew the goods were run. So far indeed has this principle been carried, and fo anxious have our judges been to put a stop to the practice of smuggling, that in different cases which have occurred of action being brought at the instance of a foreign merchant against persons resident in Scotland for payment of goods which had been fmuggled, a diffinction has been made betwixt the case of the foreign merchant being or not being a native of Scotland. Where the foreign merchant was a native of Scotland, it has been prefumed that he was acquainted with the revenue law of the country, and that he was in a manner versans in re illicita; and therefore action has been denied for recovery of the price of fuch goods: but whereon the other hand, the foreign merchant was not a native of Scotland, no ways amenable to, and even prefumed ignorant of, its laws, he has with juffice been allowed action for the price of fuch goods, unless it were shown that he had in fact been particeps criminis, by aiding the fmuggle. The same principle has regulated the decisions in the courts of England in cases of a similar nature, which have within thefe few years come before them.

3. Though this contract may be perfected before delivery of the subject, the property remains till then with the vender: (See N° clxii. 9.). Yet till delivery, the hazard of its deterioration falls on the purchaser, because he has all the profits arising from it after the fale. On the other hand, the fubject itself perishes to the vender ; (1.) If it should perish through his fault, or after his undue delay to deliver it. (2.) If a fubject is fold as a fungible, and not as an individual, or corpus, e. g. a quantity of farm-wheat, fold without diftinguishing the parcel to be delivered from the rest of the farm. (3.) The periculum lies on the vender till delivery, if he be obliged by a special article in the contract to deliver the fubject at a certain place.

4. Location is that contract where an hire is ftipu- Location lated for the use of things, or for the service of persons. He who lets his work or the use of his property to hire, is the locator or leffor; and the other, the conductor or leffee. In the location of things, the leffor is obliged to deliver the fubject, fitted to the use it was let for : and the leffee must preserve it carefully, put it to no other use, and, after that is over, restore it. Where a workman or artificer lets his labour, and if the work is either not performed according to contract,

as an artificer, to have undertaken a work to which he was not equal. A fervant hired for a certain term, is intitled to his full wages, though from fickness or other accident he should be disabled for a part of his time; but if he die before the term, his wages are only due for the time he actually ferved. If a mafter dies, or without good reafon turns off, before the term, a fervant who eats in his house, the servant is intitled to his full wages, and to his maintenance till that term: and, on the other part, a fervant who without ground deferts his fervice, forfeits his wages and maintenance,

Society.

and is liable to his mafter in damages. 5. Society or copartner/hip is a contract, whereby the feveral partners agree concerning the communication of loss and gain arising from the fubject of the contract. It is formed by the reciprocal choice which the partners make one of another; and fo is not conflicuted in the cafe of co-heirs, or of feveral legatees in the same subject. A copartnership may be so constituted, that one of the partners shall, either from his fole right of property in the fubject, or from his superior skill, be intitled to a certain share of the profits, without being fubjected to any part of the lofs; but a fociety, where one partner is to bear a certain proportion of lofs, without being intitled to any share of the profits, called by the Romans focietas leonina, is justly reprobated. All the partners are intitled to fliares of profit and loss proportioned to their feveral stocks, where it is not otherwife covenanted.

6. As partners are united, from a delectus persona, in a kind of brotherhood, no partner can, without a special power contained in the contract, transfer any part of his share to another. All the partners are bound in folidum by the obligation of any one of them, if he fubscribe by the firm or social name of the company; unless it be a deed that falls not under the common course of administration. The company effects are the common property of the fociety subjected to its debts; fo that no partner can claim a division thereof, even after the fociety is diffolved, till thefe are paid: and, confequently, no creditor of a partner can, by diligence, carry, to himfelf the property of any part of the common flock, in prejudice of a company creditor : but he may, by arrestment, secure his debtor's share in the company's hands, to be made forthcoming to him at the close of the copartnership, in so far as it is not ex-

haufted by the company debts.

7. Society being founded in the mutual confidence among the focii, is diffolved, not only by the renunciation, but by the death of any one of them, if it be not otherwise specially covenanted. A partner who renounces upon unfair views, or at a critical time, when his withdrawing may be fatal to the fociety, loofes his partners from all their engagements to him, while he is bound to them for all the profits he shall make by his withdrawing, and for the lofs arifing thereby to the company. Not only natural, but civil death, e. g. ariting from a fentence inflicting capital punishment, makes one incapable to perform the duties of a partner, and confequently diffolves the fociety. In both cafes, of death and renunciation, the remaining partners may continue the copartnership, either expressly, by entering into a new contract; or tacitly, by carrying on their trade as formerly. Public trading com- Law of panies are now every day constituted, with rules very Scotland. different from those which either obtained in the Roman law, or at this day obtain in private focieties. The proprietors or partners in thefe, though they may transfer their shares, cannot renounce; nor does their death dissolve the company, but the share of the deceased defeends to his representative.

8. A joint trade is not a copartnership, but a mo- A joint mentary contract, where two or more perfons agree to trade. contribute a fum, to be employed in a particular courfe of trade, the produce whereof is to be divided among the adventurers, according to their feveral shares, after the voyage is finished. If, in a joint trade, that partner who is intruited with the money for purchasing the goods, should, in place of paying them in cash; buy them upon credit, the furnisher who followed his faith alone in the fale, has no recourse against the other adventurers; he can only recover from them what of the buyer's fliare is yet in their hands. Where any one of the adventurers in a joint trade becomes bankrupt, the others are preferable to his creditors, upon the common flock, as long as it continues undivided, for their relief of all the engagements entered into by them on account of the adventure.

9. Mandate is a contrast, by which one employs a-Mandates nother to manage any bulinels for him; and by the Roman law, it must have been gratuitous. It may be constituted tacitly, by one's suffering another to act in a certain branch of his affairs, for a tract of time together, without challenge. The mandatory is at liberty not to accept of the mandate; and, as his powers are folely founded in the mandant's commission, he must, if he undertakes it, strictly adhere to the directions given him: Nor is it a good defence, that the method he followed was more rational; for in that his employer was the proper judge. Where no specialrules are prescribed, the mandatory, if he acts prudently, is fecure, whatever the fuccels may be; and he can fue for the recovery of all the expences reasonably deburfed by him in the execution of his office.

10. Mandates may be general, containing a power of administering the mandant's whole affairs; but no mandate implies a power of difpoling gratuitously of the constituent's property, nor even of felling his heritage for an adequate price : but a general mandatory may fell fuch of the moveables as muit otherwise perish. No mandatory can, without special powers, transact doubtful claims belonging to his constituent, or refer

them to arbiters.

11. Mandates expire, (1.) By the revocation of the employer, though only tacit, as if he should name another mandatory for the same business. (2.) By the renunciation of the mandatory; even after he has executed part of his commission, if his office be gratuitous, (3.) By the death, either of the mandant or mandatory : But if matters are not entire, the mandate continues in force, notwith landing fuch revocation, renunciation, or death. Procuratories of refignation, and precepts of feilin, are made out in the form of mandates; but, because the y are granted for the fole benefit of the mandatory, all of them, excepting precepts of clare conflat, are declared (by act 1693) to continue after the death either of the granter or grantee. Deeds which contain a clause or mandate for registration, are for the

fame reason made registrable after the death of either knew that nothing was due; for qui consulto dat quod Law of cotland. (by act 1093 and 1696.)

12. The favour of commerce has introduced a tacit mandate, by which mafters of ships are impowered to contract in name of their exercitors or employers. for repairs, thip-provitions, and whatever elfe may be necessary for the ship or crew; so as to obline not themfelves only, but their employers. Whoever has the actual charge of the ship is deemed the master, though he should have no commission from the exercitors, or should be substituted by the master in the direction of the ship without their knowledge. Exercitors are liable, whether the mafter has paid his own money to a merchant for necessaries, or has borrowed money to purchase them. The furnisher or lender must prove that the ship needed repairs, provisions, &c. to such an extent; but he is under no necessity to prove the application of the money or materials to the ship's use. If there are feveral exercitors, they are liable finguli in folidum. In the fame manner the undertaker of any branch of trade, manufacture, or other land negociation, is bound by the contracts of the inflitors whom he fets over it, in fo far as relates to the subject of the prapofitura.

Homologation.

13. Contracts and obligations, in themselves imperfect, receive frength by the contractor or his heirs doing any act thereafter which imports an approbation of them, and confequently supplies the want of an original legal confent. This is called homologation; and it takes place even in deeds intrinfically null, whether the nullity arises from the want of statutory folemnities, or from the incapacity of the granter. It cannot be inferred, (1.) By the act of a person who was not in the knowledge of the original deed; for one cannot approve what he is ignorant of. (2.) Homologation has no place where the act or deed, which is pleaded as fuch, can be afcribed to any other cause; for oan intention to come under an obligation is not pre-

Quafi-con-

gracts.

14. Quafi-contracts are formed without explicit confent, by one of the parties doing fomething which by its nature either obliges him to the other party, or the other party to him. Under this class may be reckoned tutory, &c. the entry of an heir, negotiorum geflio, incommon proprietors, and mercium jaclus levanda navis caufa. Negotiorum geftio forms those obligations which arise from the management of a person's affairs, in his absence, by another, without a mandate. As such manager acts without authority from the proprietor. he ought to be liable in exact diligence, unless he has from friendship interposed in affairs which admitted so delay; and he is accountable for his intromiffions with interest. On the other part, he is intitled to the recovery of his necessary debursements on the subject. and to be relieved of the obligations in which he may have bound himfelf in confequence of the management.

15. Indebiti folutio, or the payment to one of what is not due to him, if made through any miltake, either of fact, or even of law, founds him who made the payment in an action against the receiver for repayment (condictio indebiti.) This action does not lie. (1.) If the fum paid was due ex aquitate, or by a natufolely in equity. (2.) If he who made the payment non debebat, præfumitur donare.

16. Where two or more persons become common Right of si proprietors of the fame subject, either by legacy, gift, viding comor purchase, without the view of copartnership, an ob-mon proligation is thereby created among the proprietors to justy. communicate the profit and lofs arifing from the fubicat. while it remains common: And the fubject may be divided at the fuit of any having interest. This divifion, where the question is among the common proprietors, is according to the valuation of their respective properties : . But where the question is between the proprietors and those having fervitudes upon the property, the fuperfice is only divided, without prejudice to the property. Commonties belonging to the king, or to roval boroughs, are not divisible. Lands lying runrig, and belonging to different proprietors, may be divided, with the exception of borough and incorporated acres; the execution of which is committed to the judge-ordinary, or justices of the peace.

17. The throwing of goods overboard, for lighten- Lex Rhodia ing a ship in a storm, creates an obligation, whereby de justu. the owners of the ship and goods saved are obliged to contribute for the relief of those whose goods were thrown overboard, that fo all may bear a proportional lofs of the goods ejected for the common fafety. In this contribution, the ship's provisions suffer no estimation. A malter who has cut his mail, or parted with his anchor, to fave the ship, is intitled to this relief; but if he has loft them by the ftorm, the lofs falls only on the ship and freight. If the ejection does not fave the ship, the goods preferved from shipwreck are not liable in contribution. Ejection may be lawfully made, if the mafter and a third part of the mariners judge that measure necessary, though the owner of the goods should oppose it: and the goods ejected are to be valued at the price that the goods of the

fame fort which are faved shall be afterwards fold for. 18. There are certain obligations which cannot Accessory fubfift by themselves, but are accessions to, or make a obligations, part of, other obligations. Of this fort are fidejuffion, and the obligation to pay interest. Cautionry, or fidejustion, is that obligation by which one becomes engaged as fecurity for another, that he shall either pay

a fum, or perform a deed.

19. A cautioner for a fum of money may be bound, Cautionry, conjunctly and feverally for and with the principal debtor. The first has, by our customs, the beneficium ordinis, or of discussion; by which the creditor is obliged to discuss the proper debtor, before he can infift for payment against the cautioner. Where one is bound as full debtor with and for the principal, or conbound equally in the fame obligation, each in folidum : and confequently, the cautioner, though he is but an acceffory, may be fued for the whole, without either discussing or even citing the principal debtor. Catitioners for performance of facts, by another, or for the faithful discharge of an office (c. g. for factors, tutors, &c.), cannot by the nature of their engagement be bound conjunctly and feverally with the principal obligant, because the fact to which the principal is bound cannot possibly be performed by any other. In such engagements, therefore, the failure must be previously

ever fince.

Law of conflituted against the proper debtor, before action can Scotland, be brought against the cautioner for making up the loss of the party fuffering.

20. The cautioner, who binds himfelf at the defire of the principal debtor, has an actio mandati or of relief against him, for recovering the principal and interest paid by himself to the creditor, and for necessary damages; which action lies de jure, though the creditor should not assign to him on payment. As relief against the debtor is implied in fidejusfory obligations, the cautioner, where such relief is out off, is no longer bound : hence, the defence of prescription frees the cautioner, as well as the principal debtor.

21. But, (1.) Where the cautionry is interposed to an obligation merely natural, the relief is reflucted to the fums that have really turned to the debtor's profit. (2.) A cautioner who pays without citing the debtor, lofes his relief, in fo far as the debtor had a relevant defence against the debt, in whole or in part. Relief is not competent to the cautioner, till he either pays the debt, or is diffressed for it; except, tft, Where the debtor is expressly bound to deliver to the cautioner his obligation cancelled, against a day certain, and has failed; or, 2dly, Where the debtor is vergens ad inopiam; in which case the cautioner may, by proper diligence, secure the debter's funds for his own relief, even before payment or diffrefs.

22. A right of relief is competent de jure to the cautioner who pays, against his co-cautioners, unless where the cautioner appears to have renounced it. In consequence of this implied relief, a creditor, if he shall grant a discharge to any one of the cautioners, must, in demanding the debt from the others, deduct that part as to which he has cut off their relief by that difcharge. Where the principal debtor, in a bond in which a cautioner is bound, grants bond of corroboration with a new cautioner, both cautioners, as they intervene for the same debt, and at the defire of the fame debtor, have a mutual relief against each other; but where the cautioner in the first bond figns as a principal obligant in the corroboration, the cautioner in the new bond, it would feem, would be intitled to a total relief against the first cautioner. At fame time, the decisions of the court of session are not perfectly at one upon this branch of the doctrine

Yudicial cautionry.

of cautionry. 23. Cautionry is also judicial, as in a sufpension. It is fufficient to loofe the cautioner, that when he became bound, the fuspender had good reason to sufpend, e. g. if the charger had at that period no title, grounds of fuspension should be afterwards taken off. In all maritime causes, where the parties are frequently foreigners, the defender must give caution judicio fifti et judicatum folvi: fuch cautioner gets free by the longing to another which carries interest, he ought to death of the defender before fentence; but he continues bound, though the caufe should be carried from the admiral to the court of fession. This fort of caution is only to be exacted in causes strictly maritime.

24. It happens frequently, that a creditor takes two or more obligants bound to him, all as principal debtors, without fidejussion. Where they are so is a clause in a bond or obligation, by which money bound, for the performance of facts that are in them- is made to carry interest. An obligation is not lawfelves indivifible, they are liable each for the whole, ful, where it is agreed on, that the yearly interest of

fum of money, they are only liable pro rata; unless, (1.) Where they are in express ords bound conjunct. Scotland. ly and feverally; or, (2.) In the cafe of bills or promissory notes. One of several obligants of this fort, who pays the whole debt, or fulfils the obligation, is intitled to a proportional relief against the rest; in fuch manner, that the loss must, in every case, fall equally upon all the folvent obligants.

25. Obligations for fums of money are frequently interest of accompanied with an obligation for the annualrent or interest thereof. Interest (usura) is the profit due by the debtor, of a fum of money to the creditor for the use of it. The canon law considered the taking of interest as unlawful: the law of Moses allowed it to be exacted from ftrangers: and all the reformed nations of Europe have found it necessary, after the example of the Romans, to authorife it at certain rates fixed by flatute. Soon after the reformation, our legal interest was fixed at the rate of 10 per cent, per annum; from which time it has been gradually reduced, till at laft, by 12 Ann. flat. 2. c. 16. it was brought to five per cent. and has continued at that rate

26. Interest is due, either by law or by padion. It is due by law, either from the force of Statute, under which may be included acts of federunt, or from the nature of the transaction. Bills of exchange, and inland bills, though they should not be protested, car- . ry interest from their date in case of not acceptance; or from the day of their falling due, in case of acceptance and not payment. Where a bill is accepted, which bears no term of payment, or which is payable on demand, no interest is due till demand be made of the fum, the legal voucher of which is a notorial protest. Interest is due by a debtor after denunciation, for all the fums contained in the diligence, even for that part which is made up of interest. Sums paid by cautioners on diffress carry interest, not only as to the principal fum in the obligation, but as to the interest paid by the cautioner. Factors named by the court of fession are liable for interest, by a special act of federunt; fee No clxxii. 11.

27. It arises en lege, or from the nature of the transaction, that a purchafer in a sale is liable in interest for the price of the lands bought from the term of his entry, though the price should be arrested in his hands, or though the feller should not be able to deliver to him a fufficient progress or title to the lands; for no purchaser can in equity enjoy the fruits of the lands, while at the fame time he retains the inor had not then performed his part, though these tercit of the price: but lawful confignation of the price made by a purchaser, upon the refusal of the person's having right to receive it, stops the currency of interest. Where one intermeddles with money berestore it cum omni obventione et causa; and is therefore liable in the interest of it, as being truly an accessory of the subject itself. It is also from the nature of the transaction, that interest is in certain cases allowed to merchants or others in name of damages.

28. Interest is due by express padion, where there or finguli in folidum. But, if the obligation be for a the fum lent, if it should not be paid punctually as it

General

of obliga

tion.

granted, not only for the fum truly lent, but for the interest to the day at which the obligation is made payable, whereby the intermediate interest is accumulated into a principal fum from the term of payment. Interest may be also due by implied pastion: Thus, where interest upon a debt is by a letter promised for time past, such promise implies a paction for interest as long as the debt remains unpaid; thus alfo, the use of payment of interest presumes a paction, and

when interest is expressed for one term, it is presumed

to be bargained for till payment

29. The subject-natter of all obligations confifts either of things, or of fails. Things exempted from commerce cannot be the subject of obligation. (See properties No clxii. 2.) One cannot be obliged to the performance of a fact naturally impossible; nor of a fact in itself immoral, for that is also in the judgment of law impossible. Since impossible obligations are null, no penalty or damage can be incurred for non performance: but it is otherwise, if the fact be in itself posfible, though not in the debtor's power; in which case the rule obtains, locum fucti imprastabilis subit damnum et interesse.

> 30. An obligation, to which a condition is adjected, either naturally or morally impossible, is in the general case null; for the parties are prefumed not to have been ferious. But fuch obligation is valid, and the condition thereof held pro non fcripta, (1.) In teftaments; (2.) In obligations, to the performance of which the granter lies under a natural tie, as in bonds of provision to a child. Where an obligation is granted under a condition, lawful but unfavourable, e. g. that the creditor shall not marry without the confent of certain friends, no more weight is given to the condition than the judge thinks reasonable. A condition, which is in some degree in the power of the creditor himself, is held as fulfilled, if he has done all he could to fulfil it. Implement or performance cannot be demanded in a mutual contract, by that party who himself declines or cannot fulfil the counterpart.

> 31. Donation, fo long as the subject is not delivered to the donce, may be justly ranked among obligations; and it is that obligation which arises from the mere good will and liberality of the granter. Donations imply no warrandice, but from the future facts of the donor. They are hardly revocable by our law for ingratitude, though it should be of the groffest kind; those betwixt man and wife are revocable by the donor, even after the death of the donee; but remuneratory grants, not being truly donations, cannot be fo revoked. That special fort of donation, which is conflituted verbally, is called a promise. The Roman law intitled all donors to the beneficium competentie, in virtue of which they might retain such part of the donation as was necessary for their own subsistence. Our law allows this benefit to fathers, with respect to the provisions granted to their children; and to grandfathers, which is a natural confequence of childrens obligation to aliment their indigent parents; but to no collateral relation, not even to bro-

Law of falls due, shall be accumulated into a principal sum mortis causa, are of the nature of legacies, and like Scotland bearing interest; but an obligation may be lawfully them revocable; consequently, not being effectual in the granter's life, they cannot compete with any of his creditors; not even with those whose debts were contracted after the donation. They are understood. to be given from a personal regard to the donce, and therefore fall by his predecease. No deed, after delivery, is to be prefumed a donatio mortis caufa; for revocation is excluded by delivery.

33. Deeds are not prefumed, in dubio, to be donations. Hence, a deed by a debtor to his creditor, if donation be not expressed, is presumed to be granted in fecurity or fatisfaction of the debt; but bonds of provision to children are, from the prefumption of paternal affection, construed to be intended as an additional patrimony: yet a tocher, given to a daughter in her marriage-contract, is prefumed to be in fatisfaction of all former bonds and debts; because marriage contracts usually contain the whole provisions in favour of the bride. One who aliments a person that is come of age, without an express paction for board, is prefumed to have entertained him as a friend, unless in the case of those who earn their living by the entertainment or board of ftrangers. But alimony given to minors, who cannot bargain for themselves, is not accounted a donation; except either where it is prefumed, from the near relation of the person alimenting, that it was given ex pietate; or where the minor had a father or curators, with whom a bargain might have been made.

SECT. XVI. Of the diff dution or extinction of ob- classic ligations.

OBLIGATIONS may be diffolved by performance or Extinction implement, confent, compensation, novation, and confusion. of obliga-(1.) By specifical personance: thus, an obligations, as, tions for a sum of money is extinguished by pay ance. ment. The creditor is not obliged to accept of payment by parts, unless where the fum is payable by different divitions. If a debtor in two or more feparate bonds to the same creditor, made an indefinite payment, without ascribing it at the time to any one of the obligations, the payment is applied, 1st, To interest, or to fums not bearing interest. 2dly, To the fums that are least secured, if the debtor thereby incurs no rigorous penalty. But, 3dly, If this application be penal on the debtor, e.g. by fuffering the legal of an adjudication to expire, the payment will be applied fo as to fave the debtor from that forfeiture. Where one of the debts is fecured by a cautioner, the other not, the application is to be for made, cateris paribus, that both creditor and cautioner may have equal justice done to them.

2. Payment made by the debtor upon a mistake in fact, to one whom he believed, upon probable grounds, to have the right of receiving payment, extinguishes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect; as if a debtor, feized by letters of caption, should make payment to the messenger ; for ignorantia juris neminem excufat. In all debts, the debtor, if he be not interpelled, may fafely pay before the term, except in tack-duties or feu-duties ; 32. Donations made in contemplation of death, or the payment whereof, before the terms at which they

Denation.

Law of are made payable, is confirmed to be collusive, in a question with a creditor of the landlord or superior. Payment is in dubio prefumed, by the voucher of the debt being in the hands of the debtor : chirographum,

apud debitorem repertum, præfumitur folutum.

3. Obligations are extinguishable by the consent of the creditor, who, without full implement, or even By confent. any implement, may renounce the right conflituted in his own favour. Though a discharge or acquittance granted by one whom the debtor bona fide took for the creditor, but who was not, extinguishes the obligation, if the fatisfaction made by the debtor was real; yet where it is imaginary, the discharge will not screen him from paying to the true creditor the debt for which he had made no prior fatisfaction. all debts which are constituted by writing, the extinction, whether it be by specifical performance or bare confent, must be proved, either by the oath of the creditor, or by a discharge in writing; and the same folemnities which law requires in the obligation, are necessary in the discharge: but, where payment is made, not by the debtor himself, but by the creditor's intromission with the rents of the debtor's estate, or by delivery to him of goods in name of the debtor, fuch delivery or intromission, being falli, may be proved by witneffes, though the debt should have been not only constituted by writing, but made real on the debtor's lands by adjudication.

4. A discharge, though it should be general, of all that the granter can demand, extends not to debts of an uncommon kind, which are not prefumed to have been under the granter's eye. This doctrine applies alfo to general affignations. In annual payments, as of rents, feu-duties, interest, &c. three confecutive discharges by the creditor, of the yearly or termly duties, prefume the payment of all precedings. Two discharges by the ancestor, and the third by the heir, do not infer this prefumption, if the heir was ignorant of the ancestor's discharges. And discharges by an administrator, as a factor, tutor, &c. presume only the payment of all preceding duties incurred during his administration. This prefumption arises from repeating the discharges thrice successively; and so does not hold in the case of two discharges, though they

By compenfation.

should include the duties of three or more terms. 5. Where the fame person is both creditor and debtor to another, the mutual obligations, if they are for equal fums, are extinguished by compensation; if for unequal, still the leffer obligation is extinguished, and the greater diminished, as far as the con-course of debit and credit goes. To found compensation, (1.) Each of the parties must be debtor and creditor at the same time. (2.) Each of them muft be debtor and creditor in his own right. (3.) The mutual debts must be of the same quality : hence, a fum of money cannot be compensated with a quantity of corns; because, till the prices are fixed, at which the corns are to be converted into money, the two debts are incommensurable. Lastly, compensation cannot be admitted, where the mutual debts are not clearly afcertained, either by a written obligation, the fentence of a judge, or the oath of the party. Where this requires but a fhort discussion, sentence for the purfuer is delayed for fome time, ex equitate, that the defender may make good his ground of com-

pensation. Where a debt for fungibles is ascertained Law of in money by the fentence of a judge, the compensation can have no effect farther back than the liquidation: because, before sentence, the debts were incommensurable ; but, where a debt for a sum of money is, in the course of a suit, constituted by the oath of the debtor, the compensation, after it is admitted by the judge, operates retro, in fo far as concerns the currency of interest, to the time when, by the parties acknowledgment, the debt became due: for, in this case, the debtor's oath is not what creates the debt, or makes it liquid; it only declares that fuch a liquid fum was truly due before. Compensation cannot be offered after decree, either by way of suspension or reduction; unless it has been formerly pleaded, and unjustly repelled. Decrees in absence are excepted.

Part III.

. 6. The right of retention, which bears a near re-By retenfemblance to compensation, is chiefly competent, where tion. the mutual debts, not being liquid, cannot be the ground of compensation; and it is sometimes admitted ex aquitate, in liquid debts, where compensation is excluded by flatute : thus, though compensation cannot be pleaded after decree, either against a creditor or his affignee: yet, if the original creditor should become bankrupt, the debtor, even after decree, may retain against the assignee, till he gives security for satisfying the debtor's claim against the cedent. This right is frequently founded in the expence deburfed or work employed on the subject retained, and so arises from the mutual obligations incumbent on the parties. It has never been disputed that retention of goods was competent, until payment or fatisfaction of the debt incurred in relation to these goods; but it was found by the court of fession, in a case which was very lately before them, that goods could not be retained by a manufacturer until payment of a prior debt; the debt incurred upon the goods in his hand being offered; and although the debtor had become bankrupt, and the manufacturer must otherwife rank as a common creditor for his prior debt. But retention may be fuffained, though the debt due to him who claims it does not arise from the nature of the obligation by which he is debtor: thus, a factor on a land effate may retain the fums levied by him in confequence of his factory, not only till he be paid of the difburfements made on occasion of fuch estate, but also till he be discharged from the separate engagements he may have entered into on his conftituent's account.

7. Obligations are diffolved by novation, whereby By novaone obligation is changed into another, without chanstion. ging either the debtor or creditor. The first obligation being thereby extinguished, the cautioners in it are loofed, and all its confequences discharged; so that the debtor remains bound only by the lait. As the creditor to whom a right is once constituted, ought not to lofe it by implication, novation is not easily prefumed, and the new obligation is construed to be merely corroborative of the old; but, where the fecond obligation ex- By delegae pressly bears to be in fatisfaction of the first, these words tion. must necessarily be explained into novation. Wherethe creditor accepts of a new debtor, in place of the former who is discharged, this method of extinction is .

8. Obligations are extinguished confusione, where the By confu-

Law of debit and credit meet in the fame perfon, either by fuccession or fingular title, e. g. when the debtor succeeds ger to both; for one cannot be debtor to himfelf. If the fuccession, from which the confusio arises, happens afterwards to be divided, fo as the debtor and creditor come again to be different persons; the confusio does not produce an extinction, but only a temporary fufpension, of the debt.

SECT. XVII. Of Affignations.

Affigna.

HERITABLE rights, when they are cloathed with infestment, are transmitted by disposition, which is a writing containing procuratory of refignation and precept of feifin; but those which either require no feifin, or on which feilin has not actually followed, are tranfmissible by simple assignation. He who grants the affignation is called the cedent; and he who receives it. the affiguee or ceffionary: if the affiguee conveys his right to a third person, the deed of conveyance is called a translation; and if he assigns it back to the cedent, a retrocession. Certain rights are, from the uses to which they are deftined, incapable of transmission, as alimentary rights: others cannot be affigued by the person invested in them, without special powers given to him; as tacks, reversions; the transmission of a third fort, is not prefumed to be intended, without an express conveyance; as of paraphernal goods, which are so proper to the wife, that a general affignation, by her to her hufband, of all that did or should belong to her at her decease, does not comprehend them. A liferent-right is, by its nature, incapable of a proper transmission; but its profits may be assigned,

Intimation

2. Affignations must not only be delivered to the of alligna- affignee, but intimated by him to the debtor. Intimations are confidered as fo necessary for completing the conveyance, that in a competition between two affignations, the last, if first intimated, is preferred.

What notito intimazion.

In what

cafes not

tions.

3. Though, regularly, intimation to the debtor is fication is made by an instrument, taken in the hands of a notary, equivalent by the affignee or his procurator; yet the law admits equipollencies, where the notice of the affigument given to the debtor is equally strong. Thus, a charge upon letters of horning at the affignee's instance, or a fuit brought by him against the debtor, supplies the want of intimation; these being judicial acts, which expose the conveyance to the eyes both of the judge and of the debtor; or the debtor's promife of payment by writing to the affignee, because that is in effect a corroborating of the original debt. The affignee's poffession of the right, by entering into payment of the rents or interest, is also equal to an intimation; for it imports, not only notice to the debtor, but his actual compliance: but the debtor's private knowledge

> 4. Certain conveyances need no intimation, (1.) Indorfations of bills of exchange; for these are not to be fettered with forms, introduced by the laws of particular states. (2.) Bank-notes are fully conveyed by the bare delivery of them; for as they are payable to the bearer, their property must pass with their possesfion. (3.) Adjudication, which is a judicial conveyance, and marriage, which is a legal one, carry the

full right of the fubjects thereby conveyed, without

of the affignment is not fultained as intimation.

intimation : nevertheless, as there is nothing in these Law of conveyances which can of themselves put the debtor Scotland. in mala fide, he is therefore in tuto to pay to the wife, or to the original creditor in the debt adjudged, till the marriage or adjudication be notified to him. Affiguments of moveable subjects, though they be intimated, if they are made retenta possessione, (the cedent retaining the poffellion), cannot hurt the cedent's creditors; for fuch rights are prefumed, in all questions with creditors, to be collufive, and granted in truit for the cedent himfelf.

5. An affignation carries to the affignce the whole Effects of right of the fubject conveyed, as it was in the cedent; allignations and confequently, he may use diligence, either in his

cedent's name while he is alive, or in his own.

6. After an affignation is intimated, the debtor cannot prove a payment, or compensation, by the oath of the cedent, who has no longer any interest in the debt; unless the matter has been made litigious by an action commenced prior to the intimation : but the debtor may refer to the oath of the assignee, who is in the right of the cebt, that the affigument was gratuitous, or in trust for the cedent : either of which being proved, the oath of the cedent will affect the affiguee. If the affignation be in part ouerous, and in part gratuitous, the cedent's oath is good against the assignee, only in fo far as his right is gratuitous. All defences competent against the original creditor in a moveable debt, which can be proved otherwise than by his oath, continue relevant against even an onerous affiguee: whose right can be no better than that of his author, and must therefore remain affected with all the burdens which attended it in the author's person.

SECT. XVIII. Of arrestments and pointings.

THE diligences, whereby a creditor may affect his Arrestment debtor's moveable fubjects, are arrestment and poind-

ing. By arresiment is fometimes meant the securing of a criminal's person till trial; but as it is understood in the rubric of this title, it is the order of a judge, by which he who is debtor in a moveable obligation to the arrester's debtor, is prohibited to make payment or delivery till the debt due to the arrester be paid or secured. The arrester's debtor is usually called the common debtor; because, where there are two or more competing creditors, he is debtor to all of them. The person in whose hands the diligence is used is styled the arrestee.

2. Arrestment may be laid on by the authority either of the supreme court, or of an inferior judge. In the first case, it proceeds either upon special letters of anrestment, or on a warrant contained in letters of horning; and it must be executed by a messenger. The warrants granted by inferior judges are called precepts of arrestment, and they are executed by the officer proper to the court. Where the debtor to the common debtor is a pupil, arrestment is properly used in the hands of the tutor, as the pupil's administrator: this doctrine may perhaps extend to other general adminiftrators, as commissioner, &c. But arrestment, used in the hands of a factor or iteward, cannot found an action of forthcoming without calling the constituent. Where the debtor to the common debtor is a corporation, arrestment must be used in the hands of the directors or

Law of treasurer, who represent the whole body. Arrestment, when it is used in the hands of the debtor himself, is inept; for that diligence is intended only as a restraint upon third parties.

3. All debts, in which one is perfonally bound, tho' they should be heritably secured, are grounds upon which the creditor may arrest the moveable estate belonging to his debtor. Arrestment may proceed on a debt, the term of payment whereof is not yet come, in case the debtor be vergens ad inopiam. If a debt be not yet constituted by decree or registration, the creditor may raife and execute a fummons against his debtor for payment, on which pending action arrestment may be used, in the same manner as inhibition, which is called arrestment upon a dependence. If one's ground of credit be for the performance of a fact, or if his depending process be merely declaratory, without a conclusion of payment or delivery, such claims are not admitted to be fufficient grounds for arreft-

What debts arrestable.

4. Moveable debts are the proper fubject of arrestment; under which are comprehended conditional debts, and even depending claims. For leffening the expence of diligence to creditors, all bonds which have not been made properly heritable by feifin are declared arreftable: but this does not extend to adjudications, wadfets, or other perfonal rights of lands, which are not properly debts. Certain moveable debts are not arrestable. (1.) Debts due by bill, which pass from hand to hand as bags of money. (2.) Future debts; for though inhibition extends to adquirenda as well as adquifita, yet arrestment is limited, by its warrant, to the debt due at the time of ferving it against the arrestee. Hence, an arrestment of rents or interest carries only those that have already either fallen due or at least become current. Claims, depending on the iffue of a fuit, are not confidered as future debts; for the fentence, when pronounced, has a retrospect to the period at which the claim was first founded. The like doctrine holds in conditional debts. (3.) Alimentary debts are not arreftable; for these are granted on personal considerations, and fo are not communicable to creditors; but the past interest due upon such debt may be arrested by the perfon who has furnished the alimony. One cannot fecure his own effects to himfelf for his maintenance, fo as they shall not be affectable by his creditors. Salaries annexed to offices granted by the king, and particularly those granted to the judges of the Session, and the fees of fervants, are confidered as alimentary funds ; but the furplus fee, over and above what is necessary for the fervant's personal uses, may be arrested. It has also been found, that a wadfet sum configned after an order of redemption used, but before decreet of declarator, is not arrestable.

breach of arreflment

5. If, in contempt of the arrestment, the arrestee shall make payment of the sum, or deliver the goods arrested, to the common debtor, he is not only liable criminally for breach of arrestment, but he must pay the debt again to the arrefter. As the law formerly flood, an arrestment used at the market cross of Edinburgh, pier and shore of Leith, against a person furth of the kingdom, was good; fo that if the arreftee made payment to his creditor after the date of the arreftment, he was found liable in second payment to the arpefter, because he had done all in his power to notify

his diligence. This, however, is very properly altered Law of by & 3. of the act of the 23d Geo. III. which declares, that an arrestment used at the market cross of Edinburgh, pier and shore of Leith, in the hands of any person out of the kingdom, without other sufficient notification, shall not interpel the arrestee from paying bona fide to the original creditor. Arrestment is not merely prohibitory, as inhibitions are; but is a step of diligence which founds the user in a subsequent action. whereby the property of the fubiect arrefted may be adjudged to him. It therefore does not, by our latter practice, fall by the death of the arreftee; but continues to subsist, as a foundation for an action of forthcoming against his heir, while the subject arrested remains in medio. Far less is arrestment lost, either by the death of the arrefter, or of the common debtor.

6. Where arrestment proceeds on a depending ac-Loosing of tion, it may be loofed by the common debtor's giving arrestment. fecurity to the arrefter for his debt in the event it shall be found due. Arrestment founded on decrees, or on registered obligations, which in the judgment of law are decrees, cannot be loofed but upon payment or confignation; except, (1.) Where the term of payment of the debt is not yet come, or the condition has not yet existed. (2.) Where the arrestment has proceeded on a registered contract, in which the debts or mutual obligations are not liquid. (3.) Where the decree is suspended, or turned into a libel; for, till the fuspension be discussed, or the pending action concluded, it cannot be known whether any debt be truly due. A loofing takes off the nexus which had been laid on the subject arrested; so that the arrestee may thereafter pay fafely to his creditor, and the cautioner is fubilituted in place of the arrestment, for the arrester's fecurity : yet the arrester may, while the subject continues with the arreftee, purfue him in a forthcoming, notwithstanding the looting.

7. Arrestment is only an inchoated or begun dili-Forthcomgence; to perfect it, there must be an action brought ing on arby the arrelter against the arrestee, to make the debt refiment. or fubject arrested forthcoming. In this action, the common debtor must be called for his interest, that he may have an opportunity of excepting to the lawfulness or extent of the debt on which the diligence proceeded. Before a forthcoming can be purfued, the debt due by the common debtor to the arrester must be liquidated; for the arrefter can be no further intitled to the subject arrested than to the extent of the debt due to him by the common debtor. Where the fub. ject arrested is a sum of money, it is, by the decree of forthcoming, directed to be paid to the purfuer towards fatisfying his debt; where goods are arrefted, the judge ordains them to be exposed to fale, and the price to be delivered to the purfuer. So that, in either cafe, decrees of forthcoming are judicial affignations to the ar-

8. In all competitions, regard is had to the dates, Preference not of the grounds of debt, but of the diligences pro- in arreftceeding upon them. In the competition of arrestments, ments, the preference is governed by their dates, according to the priority even of hours, where it appears with any certainty which is the first. But, as arrestment is but a begun diligence, therefore if a prior arrefter shall neglect to infift in an action of forthcoming for fuch a time as may be reasonably construed into a desertion of

refter of the fubject arrefted.

Nº 178.

Poinding.

Law of his begun diligence, he lofes his preference. But, as Scotland, dereliction of diligence is not eafily prefumed, the diflance of above two years, between the first arrestment" and the decree of forthcoming, was found not to make fuch a mora as to intitle the posterior arrester to a pre-This rule of preference, according to the dates of the feveral arrestments, holds, by our present practice, whether they have proceeded on a decree or on a dependence; on debts not yet payable, or on debts already payable; provided the pendency shall have been closed, or the debt have become payable, before the iffue of the competition.

By act 23d Geo. III. 6 2. it is enacted, that when a debtor is made bankrupt, in terms of the act 1696, as thereby extended (clxxxiii. 13.), all arreftments which shall have been used for attaching any perfonal effects of fuch bankrupt within thirty days prior to the bankruptey, or within four kalendar months immediately fublequent, shall be pari passu preferable: and in order to fave as far as possible the expence of a multiplicity of arrestments, it is declared, that where the effects of a debtor are arrefted by any creditor within thirty days before the bankruptcy, or within four months after it, and a process of forthcoming or multiplepoinding is brought in which fuch arrestment is founded on, it shall be competent for any other creditor producing his interest, and making his claim in the faid process, at any time before the expiration of the faid four months, to be ranked in the fame manner as if he had used the form of arrestment; the expence of raifing the process, and of the diligence at the instance of the creditor who raifes it, being always paid out of the common fund. We here again repeat, that the enactments of this flatute are only temporary, and not vet a permanent part of the law of Scotland, whatever they may become when the fubject is refumed by the legislature upon the expiry of the act.

o. In the competition of arrestments with assignations, an affignation by the common debtor, intimated before arrestment, is preferable to the arrestment. If the affignation is granted before arrestment, but not intimated till after it, the arrefter is preferred.

10. Poinding is that diligence affecting moveable fubjects, by which their property is carried directly to the creditor. No poinding can proceed, till a charge be given to the debtor to pay or perform, and the days thereof be expired, except poindings against vasfals for their feu-duties, and poindings against tenants for rent, proceeding upon the landlord's own decree; in which the ancient custom of poinding without a previous charge continues. A debtor's goods may be pointed by one creditor, though they have been arrested before by another; for arrestment being but an imperfect diligence, leaves the right of the fubject still in the debtor, and fo cannot hinder any creditor from using a more perfect diligence, which has the effect of carrying the property directly to himfelf.

11. No cattle pertaining to the plough, nor inftrulowing does not fall under this rule.

Vol. IX. Part II.

12. In the execution of pointing, the debtor's goods Law of must be appraised, first, on the ground of the lands, Scotland where they are laid hold on, and a fecond time at the market-cross of the jurisdiction, by the stated appraifers Form thereof; or, if there be none, by persons named by the thereof. messenger or other officer employed in the diligence. Next, the meffenger must, after public intimation by three overfies, declare the value of the goods according to the fecond appraifement, and require the debtor to make payment of the debt, including interest and expences. If payment shall be offered to the creditor, or in his abfence to his lawful attorney; or if, in cafe of refufal by them, confignation of the debt shall be made in the hands of the judge-ordinary or his clerk, the goods must be left with the debtor; if not, the meffenger ought to adjudge and deliver them over, at the appraifed value, to the ufer of the diligence towards his payment: and the debtor is intitled to a copy of the warrant and executions, as a voucher that the debt is discharged in whole or in part by the goods poinded. 13. Ministers may poind for their stipends, upon one

appraifement on the ground of the lands, and landlords were always in ufe to poind fo, for their rents. Appraifement of the goods at the market-crofs of the next royal borough, or even of the next head-borough of flewartry or regality, though thefe jurifdictions be abolished, is declared as sufficient as if they were carried to the head-borough of the shire. Poinding, whether it be confidered as a fentence, or as the execution of a fentence, must be proceeded in between fun-rifing and fun-fetting; or at least it must be finished before the going off of day-light .- The powers of the officer Powers of employed in the execution of poindings, are not clear-meffengers ly defined by custom, in the case of a third party in poindclaiming the property of the goods to be poinded, This is certain, that he may take the oath of the claimant, upon the verity of his claim; and if from thence it shall appear that the claimant's title is collusive, he ought to proceed in the diligence; but if there remains the least doubt, his fafest course is to deliver the goods to the claimant, and to exprefs in his execution

the reasons why poinding did not proceed. 14. Any person who stops a pointing via facti, on groundlefs pretences, is liable, both criminally, in the pains of deforcement (fee No clxxxvi. 15.), and civilly, in the value of the goods which might have been poind-

ed by the creditor.

By the forefaid statute 23d Geo. III. § 4. it is declared, that after a perfon is rendered bankrupt, as thereby directed, no poinding of the moveables belonging to fuch bankrupt, within 30 days before his bankruptcy, or within four kalender months thereafter, shall give a preference to such poinder over the other lawful creditors of the bankrupt; but the goods fo poinded shall be considered as in medio, and the person receiving the price of them shall be liable to make the fame furthcoming, fo as that all the other creditors of the bankrupt who are possessed of liquidate grounds ments of tillage, can be pointed in the time of labour- of debt or decrees for payment, shall be intitled to their ing or tilling the ground, unlefs where the debtor has proportion of the fame; provided they make their no other goods. By labouring time is understood, that claim by fummoning the poinder at any time before time, in which that tenant, whose goods are to be the expiration of the faid four months, deducting alpoinded, is ploughing, though he should have been ways the expence of such poinding from the first end earlier or later than his neighbours; but fummer fal- of the price of fuch goods, together with 20 per cent. on the appraised value, which the poinder shall retain

Law of to account of his debt in preference to the other creditors; referving liberty to him to rank on the remaining fum for the full amount of the debt contained in his diligence. And it is by the faid act further declared, that where any person concerned in trade or. manufactures is bankrupt, as before mentioned, it may be lawful for any creditor, to the amount of L. 100, or any two creditors to the amount of L. 150, or any three or more creditors to the amount of L. 200 or upwards, to apply for fequefiration of the effate real and personal belonging to the debtor: after awarding which, an interim factor, and then a trustee, shall be chosen by the creditors, who is to conduct the business of the fequestration, according to the various rules fixed and laid down by the flatute. The act, however, exprefsly excludes all others, except those concerned in trade or manufactures, from the benefit of the fequeftration; but it is probable, when it comes to be renewed or digested in another form, this part of it will fuffer an alteration.

clxxix.

SECT. XIX. Of Prescription.

Prefcrip tion.

PRESCRIPTION, which is a method, both of eftablishing and of extinguishing property, is either posttive or negative. Politive prescription is generally defined, as the Roman usucapio, The acquisition of property (it should rather be, when applied to our law, the fecuring it against all further challenge) by the poffeffor's continuing his poffession for the time which law has declared fufficient for that purpose : negative, is the lofs or amission of a right, by neglecting to follow it forth, or use it, during the whole time limited by law. The doctrine of prescription, which is, by some writers, condemned as contrary to justice, has been introduced, that the claims of negligent creditors might not fubfit for ever, that property might be at last fixed, and forgeries discouraged, which the difficulty of detecting must have made exceeding frequent, if no length of time had limited the legal effect of writings.

Pefitive.

2. Positive prescription was first introduced into our law by 1617, c. 12. which enacts, that whoever shall have poffeffed his lands, annualrents, or other heritages, peaceably, in virtue of infeftments, for 40 years continually after their dates, shall not thereafter be difquieted in his right by any person pretending a better Under heritages are comprehended every right that is fundo annexum, and capable of continual possesfion. Continued possession, if proved as far back as the memory of man, prefirmes possession upwards to the date of the infeftment. The whole course of possession must by the act be founded on seisins; and consequently no part thereof on the bare right of apparency : but 40 years possession, without feisin, is sufficient in the prescription of such heritable rights as do not require feisin The possession must also be without any lazuful interruption, i. e. it must neither be interrupted via fadi, nor via juris. The prescription of subjects not expressed in the infestment as part and pertinent of another subject specially expressed, has been explained,

3. The act requires, that the poffessor produce, as his title of prescription, a charter of the lands preceding the 40 years possession, with the seisin following on it: and where there is no charter extant, fei-

fins, one or more, standing together for 40 years, and proceeding either on retours or precepts of clare conflat. This has given rife to a reasonable distinction observed in practice, between the prescription of a singular fucceffor, and of an heir. Singular fucceffors must produce for their title of prescription, not only a feifin, but its warrant, as a charter, disposition, &c. either in their own person, or in that of their author : but the production, by an heir, of fefins, one or more, flanding together for 40 years, and proceeding on retours or precepts of clare constat, is sufficient. The heir is not obliged to produce the retours or precepts on which his feifins proceed, nor is the fingular succeifor obliged to produce the ground of his charter; for that if the title of prescription produced be a fair deed. and a sufficient title of property, the possessor is secure by the act, which admits no ground of challenge, but falfehood. A special statute, for establishing the pofitive prescription in moveable rights, was not necesfary; for, fince a title in writing is not requifice for the acquiring of thefe, the negative prescription, by which all right of action for recovering their property is cut off, effectually fecures the poffeffor.

4. The negative prescription of obligations, by the Negative lapse of 40 years, was introduced into our law long prescripbefore the politive, (1469, c. 29 .- 1474, c. 55.) This prescription is now amplified by the foresaid act (1617), which has extended it to all actions competent upon heritable bonds, reversions, and others whatsoever; unless where the reversions are either incorporated in the body of the wadfet-right, or registered in the regifter of reversions: And reversions so incorporated, or registered, are not only exempted from the negative prescription, but they are an effectual bar against any

person from pleading the positive.

5. A shorter negative prescription is introduced by A shorter statute, in certain rights and debts. Actions of spuil-negative zie, ejection, and others of that nature, must be pur-prescripfued within three years after the commission of the fact tion. on which the action is founded. As in spuilzies and ejections, the purfuer was entitled, in odium of violence, to a proof by his own oath in litem, and to the violent profits against the defender, the statute meant only to limit these special privileges by a three years prescription, without cutting off the right of action, where the claim is restricted to simple restitution. Under the general words, and others of that nature, are comprehended all actions where the purfuer is admitted to

prove his libel by his own oath in litem.

6. Servants fees, house-rents, mens ordinaries, (i. e. Prescripmoney due for board), and merchants accounts, fall tion offerunder the triennial prescription, (by 1579, c. 83.) vants sees, There is also a general clause subjoined to this statute, of other the like debts, which includes alimentaty debts, wages due to workmen, and accounts due to writers, agents, or procurators. These debts may, by this act, be proved after the three years, either by the writing or oath of the debtor; fo that they prescribe only as to the mean of proof by witnesses; but after the three years, it behoves the creditor to refer to the debtor's oath, not only the constitution, but the subsistence of the debt. In the prescription of house-rents, servants fees, and alimony, each term's rent, fee, or alimony, runs a separate course of prescription; so that in an action for these the claim will be restricted to the arrears incurred within the three years immediately

Scotland

ofters fti-

before the citation : But, in accounts, prescription does not begin till the last article; for a fingle article cannot be called an account. Actions of removing mult also be pursued within three years after the warning. Reductions of erroneous retours prescribe, if not pur-

fued within 20 years. Of mini-

7. Ministers stipends and multures prescribe in five years after they are due; and arrears of rent, five years pends, &c. after the tenant's removing from the lands. As the prescription of mails and duties was introduced in fayour of poor tenants, that they might not fuffer by neglecting to preferve their discharges, a proprietor of lands subject to a liferent, who had obtained a lease of all the liferented lands from the liferenter, is not intitled to plead it, nor a tacksman of one's whole estate. who had by the leafe a power of removing tenants. Bargains concerning moveables, or fums of money which are proveable by witnesses, prescribe in five years after the bargain. Under these are included sales, locations, and all other confenfual contracts, to the conflitution of which writing is not necessary. But all the abovementioned debts, may, after the five years, be proved, either by the oath or the writing of the debtor; of which above, (par. 6.) A quinquennial prescription is established in arrestments, whether on decrees or depending actions: The first prescribe in five years after fentence is pronounced on the depending action.

imitation

ritings.

- 8. No person binding for or with another, either as of caution- cautioner or co-principal, in a bond or contract for a fum of money, continues bound after feven years from the date of the bond, provided he has either a clause of relief in the bond, or a separate bond of relief, intimated to the creditor, at his receiving the bond. But all diligence used within the seven years against the cautioner shall stand good. As this is a public law, intended to prevent the bad consequences of rash engagements, its benefit cannot, before the lapfe of the feven years, he renounced by the cautioner. As it is correctory, it is firitly interpreted : Thus, bonds bearing a mutual clause of relief pro rata, fall not under it; nor bonds of corroboration, nor obligations, where the condition is not purified, or the term of payment not come within the feven years : because no diligence can be used on these. The statute excludes all cautionries for the faithful discharge of offices: these not being obligations in a bond or contract for fums of money. And practice has denied the benefit of it to all judicial cautioners, as cautioners in a suspension .- Actions of count and reckoning, competent either to minors against their tutors or curators, or vice versa, prefcribe in ten years after the majority or death of the
- o. Holograph bonds, missive letters, and books of ion of hoaccount, not attested by witnesses, prescribe in 20 years, unless the creditor shall thereafter prove the verity of the subscription by the debtor's oath. It is therefore sufficient to save from the effect of this prefcription, that the constitution of the debt be proved by the party's oath after the 20 years; whereas, in ftipends, merchants accounts, &c. not only the conftitution, but the subsistence of the debt, must be proved by writing or the debtor's oath, after the term of prescription. Some lawyers extend this prescrip-

tion of holograph writings to all obligations for fums Law of not exceeding L. 100 Scots, which are not attested by Scotland. witnesses; because though these are in practice fuflained, yet they ought not to have the fame duration with deeds attefted by witnesses. Though in the short prescriptions of debts, the right of action is for ever loft, if not exercised within the time limited; yet where action was brought on any of those debts, before the prescription was run, it subsisted, like any other right, for 40 years. As this defeated the purpose of the acts establishing these prescriptions, all processes upon warnings, spuilzies, ejections, or arrestments, or for payment of the debts contained in act 1669, c. q. are by the faid act, joined with 1685, c. 14. declared to prescribe in five years, if not wakened within that time; fee No clxxxiii. 26.

10. Certain obligations are loft by the lapfe of lefs Extinction than 40 years, without the aid of statute, where the tions by tanature of the obligation, and the circumstances of citarnity. parties, justify it: thus, bills which are not intended for lafting fecurities, produced no action, where the creditor had been long filent, unless the subfiltence of the debt be proved by the debtor's oath; but the precife time was not fixed by practice. But the duration of bills is now limited to fix years by the 12 Geo. III.; rendered perpetual by 23 Geo. III. Thus also, a years after using the arrestment, and the last in five receipt for bills granted by a writer to his employer, not infifted upon for 23 years, was found not productive of an action. The prescriptions of the restitution of minors, of the benefit of inventory, &c. are cx-

plained in their proper places.

II. In the positive prescription, as established by Bona sides the act 1617, the continued possession for 40 years, prescripproceeding upon a title of property not chargeable tion. with falfehood, fecures the poffeffor against all other grounds of challenge, and fo prefumes bona fides, prafumptione juris et de jure. In the long negative prescription, bona fides in the debtor is not required: the creditor's neglecting to infift for fo long a time, is conftrued as an abandoning of his debt, and fo is equivalent to a discharge. Hence, though the sublistence of the debt should be referred to the debtor's

own oath, after the 40 years, he is not liable. 12. Prescription runs de momento in momentum : the Prescripwhole time defined by law must be completed, before tion, aa right can be either acquired or loft by it; fo that grint whom it interruption, made on the last day of the 40th year, runs. breaks its courfe. The politive prescription runs against the sovereign himself, even as to his annexed property; but it is generally thought he cannot fuffer by the negative: he is fecured against the negligence of his officers in the management of processes, by express statute, 1600, c. 14. The negative, as well as the positive prescription, runs against the church, though churchmen have but a temporary interest in their benefices. But because the rights of beneficiaries to their flipends are liable to accidents, through the frequent change of incumbents, 13 years poffeffion does, by a rule of the Roman chancery which we have adopted, found a prefumptive title in the beneficiary: but this is not properly prescription; for if by titles recovered, perhaps out of the incumbent's own hands, it shall appear that he has possessed tithes or other subjects to a greater extent than he ought, his possession will be restricted accordingly. This right

Law of must not be confounded with that established in favour of churchmen, which is confined to church lands and rents, and conflicutes a proper prescription upon a poffession of 30 years.

13. The clause in the act 1617, faving minors from prescription, is extended to the positive, as well as to the negative prescription; but the exception of minority is not admitted in the case of hospitals for children, where there is a continual fuccession of minors, that being a cafus infolitus. Minors are expressly excepted in feveral of the fhort prescriptions, as 1579, c. 18 .- 1669, c. 9.; but where law leaves them in the common case, they must be subject to the common rules.

14. Prescription does not run contra non valentem agere, against one who is barred, by some legal incapacity, from purfuing; for in fuch cafe, neither negligence nor dereliction can be imputed to him. This rule is, by a favourable interpretation, extended to wives, who ex reverentia maritali forbear to purfue actions competent to them against their husbands. On the same ground, prescription runs only from the time that the debt or right could be fued upon. Thus, inhibition preferibes only from the publishing of the deed granted to the inhibiter's prejudice; and in the prescription of removings, the years are computed only from the term at which the defender is warned to remove. Neither can prescription run against persons who are already in possession, and so can gain nothing by a pursuit. Thus, where a person, who has two adjudications affecting the fame lands, is in poffession upon one of them, prescription cannot run against the other during fuch poffession.

Certain rights incapable of prescrip.

tion.

15. Certain rights are incapable of prescription: Things that law has exempted from commerce. 2.) Res mere facultatis, e. g. a faculty to charge a fubiect with debts, to revoke, &c. cannot be loft by prescription; for faculties may, by their nature, be exercifed at any time: hence, a proprietor's right of using any act of property on his own grounds, cannot be loft by the greatest length of time. (3.) Exceptions competent to a person for eliding an action, cannot prescribe, unless the exception is founded on a right productive of an action, e. g. compensation; fuch right must be insisted on within the years of prescription. (4.) Obligations of yearly pensions or payments, though no demand has been made on them for 40 years, do not suffer a total prescription, but fill fublit as to the arrears fallen due within that period; because prescription cannot run against an obligation till it be payable, and each year's pension or payment is confidered as a separate debt.

16. No right can be loft non utendo by one, unless the effect of that prescription be to establish it in another. Hence the rule arises, juri sanguinis nunquam prascribitur. Hence also, a proprietor of land cannot lofe his property by the negative prescription, unless he who objects it can himfelf plead the politive. On the same ground, a superior's right of feu duties cannot be loft non utendo; because, being inherent in the superiority, it is truly a right of lands that cannot fuffer the negative prescription, except in favour of one who can plead the positive; which the vasfal cannot do, being destitute of a title. This rule applies also to parsonage tithes, which are an inherent burden

upon all lands not specially exempted; and from Law of which therefore the person liable cannot prescribe an Scotland. immunity by bare non-payment: but fuch vicarage tiches as are only due where they are established by ufage, may be loft by prescription. In all these cases, though the radical right cannot fuffer the negative prescription, the bygone duties, not demanded within the 40 years, are loft to the proprietor, superior, or titular.

17. Prescription may be interrupted by any deed Interrupwhereby the proprietor or creditor uses his right or forption. ground of debt. In all interruptions, notice must be given to the possessor of the subject, or the debtor, that the proprietor or creditor intends to fue upon his right. All writings whereby the debtor himfelf acknowledges the debt, and all processes for payment brought, or diligences used against him upon his obligation, by horning, inhibition, arrestment, &c. must

be effectual to interrupt prescription.

18. Interruptions, by citation upon libelled fummonfes, where they are not used by a minor, prefcribe, if not renewed every feven years: but where the appearance of parties, or any judicial act has followed thereupon, it is no longer a bare citation, but an action which subfifts for 40 years. It has been found, that the sexennial prescription of bills is not interrupted by a blank citation, as practifed in the court of admiralty. Citations for interrupting the prefeription of real rights must be given by messengers; and the fummonfes, on which fuch citations proceed, mult pass the fignet upon the bill, and be registered within 60 days after the execution, in a particular register appointed for that purpole: and where interruption of real rights is made via falli, an intrument must be taken upon it, and recorded in the faid register; otherwife it can have no effect against fingular fucceffors.

19. Interruption has the effect to cut off the courfe of prescription, so that the person prescribing can avail himself of no part of the former time, but must begin a new course, commencing from the date of the interruption. Minority, therefore, is no proper interruption: for it neither breaks the course of prescription. nor is it a document or evidence taken by the minor on his right: it is a perfonal privilege competent to him, by which the operation of the prescription is indeed suspended during the years of minority, which are therefore discounted from it; but it continues to run after majority, and the years before and after the minority may be conjoined to complete it. The same doctrine applies to the privilege ariting from one's incapacity to act.

20. Diligence used upon a debt, against any one of two or more co-obligants, preferves the debt itself, and fo interrupts prescription against all of them; except in the special case of cautioners, who are not affected by any diligence used against the principal debtor. In the same manner, a right of annualrent, constituted upon two separate tenements, is preserved as to both from the negative prescription, by diligence used against either of them. But whether such diligence has also the effect to hinder the possessor of the other tenement by fingular titles from the benefit of the posi-

tive prescription, may be doubted.

Part III. Law of Scotland

III. OF SUCCESSION.

SECT. XX. Of Succession in heritable rights. clxxx.

Succeffors and univer-

Order of

SINGULAR fucceffors are those who succeed to a person yet alive, in a special subject by fingular titles; but fuccession, in its proper fense, is a method of transmitting rights from the dead to the living. Heritable rights descend by succession to the heir properly fo called: moveable rights to the executors, who are fometimes faid to be heirs in moveables. Succeffion is either by special destination, which descends to those named by the proprietor himself; or legal, which devolves upon the perfons whom the law marks out for fuccessors, from a prefumption, that the proprietor would have named them had he made a deftination. The first is in all cases preferred to the other,

as prefumption must yield to truth.

2. In the fuecession of heritage, the heirs at law are otherwife called heirs general, heirs whatfoever, fucceffion in heritage or heirs of line; and they succeed by the right of blood, in the following order. First, defeendents; among thefe, fons are preferred to daughters, and the eldest fon to all the younger. Where there are daughters only, they fucceed equally, and are called heirsportioners. Failing immediate descendents, grandchildren succeed; and in default of them, greatgrandchildren; and fo on in infinitum: preferring, as in the former case, males to females, and the eldest male to the younger.

Collateral:

2. Next after descendents, collaterals succeed; among whom the brothers german of the deceafed have the first place. But as, in no cafe, the legal fuccession of heritage is, by the law of Scotland, divided into parts, unless where it descends to females; the immediate younger brother of the deceafed excludes the reft, according to the rule, heritage descends. Where the deceafed is himfelf the youngelt, the fuccession goes to the immediate elder brother, as being the least deviation from this rule. If there are no brothers german, the fifters german fucceed equally : then brothers confanguinean, in the fame order as brothers german; and failing them, fifters confanguinean equally. Next, the father succeeds. After him, his brothers and fifters, according to the rules already explained; then the grand-father; failing him, his brothers and fifters; and fo upwards, as far back as propinquity can be proved. Though children succeed to their mother, a mother No fucces. Though children succeed to their mother, a mother fon by the cannot to her child; nor is there any succession by our law through the mother of the deceased; in so much that one brother uterine, i. e. by the mother only, cannot fucceed to another, even in that effate which flowed

mother.

in capita and in

Airpe.

originally from their common mother. 4. In heritage there is a right of representation, by Succession which one fucceeds, not from any title in himfelf, but in the place, and as reprefenting fome of his deceafed afcendents. Thus, where one leaves a younger fon, and a grandchild by his eldeft, the grandchild, though farther removed in degree from the deceased than his uncle, excludes him, as coming in place of his father the eldest fon. Hence arises the distinction between fuccession in capita, where the division is made into as many equal parts as there are capita or heirs, which is the case of heirs-portioners; and succession in stirpes, where the remoter heirs draw no more among them than the share belonging to their ascendent or slirps, whom they represent; an example of which may be figured in the case of one who leaves behind him a daughter alive, and two grand daughters by a daughter deceased. In which case the two grand-daughters would fucceed equally to that half which would have belonged to their mother had she been alive. 5. In the fuccession of heirs-portioners, indivisible Succession

rights, e. g. titles of dignity, fall to the eldelt fifter. of heirs-A fingle right of superiority goes also to the eldest; portioners, for it hardly admits a division, and the condition of the vaffal ought not to be made worfe by multiplying fuperiors upon him. Where there are more fuch rights, the eldest may perhaps have her election of the best; but the younger fifters are intitled to a recompence, in fo far as the divisions are unequal; at least, where the fuperiorities yield a constant yearly rent. The principal feat of the family falls to the eldeft, with the garden and orchard belonging to it, without recompence to the younger fifters; but all other houses are divided amongst them, together with the lands on which they

are built, as parts and pertinents of thefe lands. A

pracipuum, however, is due only in the case of succes-

from of heirs portioners ab intellato; and therefore there

is no place for it where the fuccession is taken under a

6. Those heritable rights, to which the deceased did Heir of himself succeed as heir to his father or other ancestor, conquest, get fometimes the name of heritage in a strict sense, in opposition to the feuda nova, or feus of conquest, which he had acquired by fingular titles, and which defcend, not to his heir of line, but of conquest. This diffinction obtains only where two or more brothers or uncles, or their iffue, are next in fuccession; in which case, the immediate younger brother, as heir of line, succeeds to the proper heritage, because that descends; whereas the conquest ascends to the immediate elder brother. It has no place in female fuccession, which the law divides equally among the heirs-portioners. Where the deceased was the younger brother, the immediate elder brother is heir both of line and of conquest. An estate disponed by a father to his eldest fon, is not conquest in the fon's perfon, but heritage; because the fon would have succeeded to it, though there had been no dispofition. The heir of conquest succeeds to all rights affeeting land, which require feifin to perfect them. But teinds go to the heir of line; because they are merely a burden on the fruits, not on the land. Tacks do not fall under conquest, because they are complete rights without feifin; nor perfonal bonds taken to heirs fecluding executors.

7. The heir of line is inticled to the fuccession, not Heirshiponly of fubjects properly heritable, but to that fort of moveables, moveables called heirship, which is the best of certain kinds. This doctrine has been probably introduced, that the heir might not have an house and estate to succeed to, quite difmantled by the executor. In that fort which goes by pairs or dozens, the best pair or dozen is the heirship. There is no heirship in fungibles, or things estimated by quantity; as grain, hay, current money, &c. To intitle an heir to this privilege, the deceased must have been either, (1.) A prelate: (2.) A

tion.

Scotland.

baron, i. c. who flood infeft at his death in lands, tho' not erected into a barony; or even in a right of annualrent: Or, (3.) A burgefs; not an honorary one, but a trading burgefs of a royal borough, or at leaft one intitled to enter burgels in the right of his anceltor. Neither the heir of conquest, nor of tailzie, has right to heirship moveables.

Succeffron

8. As to fuccession by destination, no proprietor can by deftinafettle any heritable eftate, in the proper form of a teftament; not even bonds feeluding executors, tho' these are not heritable ex sua natura: But, where a testament is in part drawn up in the ftyle of a deed inter vivos, fuch part of it may contain a fettlement of heritage, though executors should be named in the testamentary part. The common method of fettling the fuccession of heritage is by disposition, contract of marriage, or fimple procuratory of refignation: and, tho' a disposition settling heritage should have neither precept nor procuratory, it founds an action against the heir of line to complete his titles to the estate; and thereafter divest himself in favour of the disponee. The appellation of tailzie, or entail, is chiefly used in the case of a land estate, which is settled on a long series of heirs substituted one after another. The person first called in the tailzie, is the institute; the rest, the heirs of tailzie, or the fubilitutes.

Tailzies.

o. Tailzies, when confidered in relation to their feveral degrees of force, are either, (1.) Simple deftinations: (2.) Tailzies with prohibitory clauses. (3.) Tailzies with prohibitory, resolutive, and irritant claufes. That is a fimple destination, where the persons called to the succession are substituted one after another, without any restraint laid on the exercise of their property. The heirs, therefore, fucceeding to fuch estate, are absolute fiars, and consequently may alter

the destination at pleasure. 10. In tailzies with claufes prohibitory, e. g. declaring that it shall not be lawful to the heirs to contract debts or alien the lands in prejudice of the fuccession, none of the heirs can alien gratuitously. But the members of entail may contract debts which will be effectual to the creditors, or may dispose of the estate for onerous causes. In both these forts, the maker himfelf may alter the tailzie; except, (1.) Where it has been granted for an onerous cause, as in mutual tailzies; or (2.) Where the maker is expressly disabled,

as well as the institute or the heirs.

11. Where a tailzie is guarded with irritant and fefolutive clauses, the estate entailed cannot be carried off by the debt, or deed, of any of the heirs fucceeding thereto, in prejudice of the fubilitutes. It was long doubted, whether fuch tailzies ought to be effectual, even where the fuperior's confent was adhibited; because they sunk the property of estates, and created a perpetuity of liferents. They were first explicitly authorised by 1685, c. 22. By this statute, the entail must be registered in a special register established for that purpose; and the irritant and resolutive clauses must be inserted, not only in the procuratories, precepts, and feifins, by which the tailzies are first constituted, but in all the after conveyances thereof; otherwife they can have no force against fingular successors. But a tailzie, even without these requilites, is effectual against the heir of the granter, or against the institute who accepts of it. It has been found, that an entail,

tho' completed by infeftment before the act 1685, was ineffectual, because not recorded in terms of the act. 12. An heir of entail has full power over the en-

tailed eftate, except in fo far as he is expressly fettered; Heirs of

and as entails are an unfavourable reftraint upon pro-entail, their perty, and a frequent snare to trading people, they are powers and firidiffimi juris : fo that no prohibition or irritancies restrictions. are to be inferred by implication. By 10 George III. c. 51. heirs of entail are intitled (notwithstanding any refrictions in the deed of entail) to improve their estates by granting leafes, building farm-houses, draining, inclosing, and excambing, under certain limitations, and to claim repayment of three-fourths of the expence from the next heir of entail .- This act extends to all tailzies, whether made prior or posterior to the 1685. 13. An heir, who counteracts the directions of the Contraven-

tailzie, by aliening any part of the eftate, charging it tion, by with debt, &c. is faid to contravene. It is not the wnom fimple contracting of debt that infers contravention; the lands entailed must be actually adjudged upon the debt contracted. An heir may, where he is not expressly barred, fettle rational provisions on his wife and children, without incurring contravention. It is not quite clear whether the heirs also of the contravener would forfeit their right from the acts or deeds of their predecessor where there is no express clause in the entail fettling it; and though the words of the act 1685 (which declares, that entails executed according to the directions of it. shall be effectual not only against the contravener and his heirs, but against creditors), may feem to favour the idea that heirs also would forfeit. the more favourable opinion has received the fanctionof our fupreme court. For the greater fecurity, however, a clause is now usually inferted in tailzies, declaring, that the contravention of the heir in possession shall not affect his descendents, when such is the in-

tention of the granter. 14. When the heirs of the last person specially cal- In what led in a tailzie come to fucceed, the irritancies have no cafes an longer any person in savour of whom they can operate; fell and confequently, the fee, which was before tailzied, becomes fimple and unlimited in the person of such heirs. By the late act 20th Geo. II. for abolishing wardholdings, the king may purchase lands within Scotland, notwithstanding the strictest entail; and where the lands are in the hands of minors or fatuous persons, his majesty may purchase them from the curators or guardians. And heirs of entail may fell to their vaffals the fuperiorities belonging to the entailed effate; but in all these cases, the price is to be settled in the fame manner that the lands or superiorities fold were

fettled before the fale.

15. Rights, not only of land-estates, but of bonds, Rights are fometimes granted to two or more persons in con- taken in junct fee. Where a right is fo granted to two ftran. conjunct gers, without any special clause adjected to it, each of fee, them has an equal interest in the fee, and the part of the deceased descends to his own heir. If the right be taken to the two jointly, and the longest liver and their heirs, the feveral thares of the conjunct fiars are affectable by their creditors during their lives : but, on the death of any one of them, the furvivor has the fee of the whole, in fo far as the share of the predeceased remains free, after payment of his debts. Where the

Their requisites.

> right is taken to the two in conjunct fee, and to the heirs

heirs of one of them, he to whose heirs the right is taken is the only fiar; the right of the other refolves into a fimple liferent : yet where a father takes a right to himself and his son jointly, and to the ion's heirs, fuch right being gratuitous, is not understood to strip the father of the fee, unless a contrary intention shall plainly appear from the tenor of the right.

16. Where a right is taken to a husband and wife, in conjunct fee and liferent, the husband, as the persona dignior, is the only fiar : the wife's right refolves into a liferent, unless it be prefumable, from special circumstances, that the fee was intended to be in the wife. Where a right of moveables is taken to husband and wife, the heirs of both fucceed equally, according to

the natural meaning of the words.

17. Heirs of provision are those who succeed to any fubject, in virtue of a provision in the investiture, or other deed of fettlement. This appellation is given most commonly to heirs of a marriage. These are more favourably regarded than heirs by fimple deftination, who have only the hope of fuccession; for heirs of a marriage, because their provisions are constituted by an onerous contract, cannot be disappointed of them by any gratuitous deed of the father. Nevertheless, as their right is only a right of fuccession, which is not defigned to restrain the father from granting onerous or rational deeds, he continues to have the full power of felling the fubject, or charging it with debts, unless a proper right of credit be given to the heir by the marriage contract. e. g. if the father should oblige himself to infeft the heir in the lands, or make payment of the fum provided against a day certain, or when the child attains a certain age, &c.; for fuch rights, when perfected by infeftment, or fecured by diligence, are effectual against all the posterior deeds of the father, even onerous.

18. Though all provisions to children, by a marrovision to riage contract conceived in the ordinary form, being merely rights of fuccession, are postponed to every onerous debt of the granter, even to those contracted posterior to the provisions; yet where a father executes a bond of provision to a child actually existing, whether fuch child be the heir of a marriage or not, a proper debt is thereby created, which, though it be without doubt gratuitous, is not only effectual against the father himself and his heirs, but is not reducible at the inftance even of his prior onerous creditors, if he was folvent at the time of granting it. A father may, notwithflanding a first marriage-contract, settle a jointure on a fecond wife, or provide the children of a fecond marriage; for fuch fettlements are deemed onerous; but where they are exorbitant, they will be restricted to what is rational: and in all fuch fettlements, where the provisions of the first marriage contract are incroached upon, the heirs of that marriage have recourfe against the father, in case he should afterwards acquire a feparate effate, which may enable him to fulfil both obligations.

19. In marriage contracts, the conquest, or a certain part of it, is frequently provided to the iffue; by which is understood whatever real addition shall be made to the father's estate during the marriage by purchase or donation. Conquest therefore must be free, i. e. what remains after payment of debts due by the father. As in other provisions, fo in conquest; the father is still

tom of fiar, and may therefore dispose of it for onerous or rational causes. Where heritable rights are provided to the beirs of a marriage, they fall to the eldest fon, for he is the heir at law in heritage. Where a fum of money is fo provided, the word beir is applied to the subject of the provision, and so marks out the executor, who is the heir in moveables. When an heritable right is pro To bairns, vided to the bairns (or iffue) of a marriage, it is divided equally among the children, if no division be made by the father; for fuch destination cuts off the exclusive right of the legal heir. - No provision granted to bairns, gives a special right of credit to any onechild, as long as the father lives: the right is granted familia; fo that the whole must indeed go to one or other of them ; but the father has a power inherent in him, to divide it among them, in fuch proportions as he thinks belt, yet fo as none of them may be entirely excluded, except in extraordinary cafes.

20. A clause of return is that, by which a sum in a Clause of bond or other right, is in a certain event limited to return to the granter himfelf, or his heirs. When a right is granted for onerous causes, the creditor may defeat the clause of return, even gratuitously. But, where the fum in the right flows from the granter, or where there is any other reasonable cause for the provision of return in his favour, the receiver cannot disappoint it gratuitously. Yet fince he is fiar, the fum may be either affigned by him for an onerous caufe, or af-

fected by his creditors.

21. An heir is, in the judgment of law, eadem per-Heirse fona cum defuncto, and fo reprefents the deceased univerfally, not only in his rights, but in his debts : in the first view, he is faid to be heir adive; in the second, paffine. From this general rule are excepted, heirs fubthituted in a special bond, and even substituted in a disposition omnium bonorum, to take effect at the granter's death; for fuch fubilitutes are confidered as fingular fucceffors, and their right as an univerfal legacy, which does not subject the legatee ultra valorem, but heirs male or of tailzie, though their right be limited to special subjects, are liable, not merely to the extent of the subject entailed or provided, but in folidum ; because fuch rights are defigned to carry an univerfal character, and fo infer an universal representation of the granter. The heir of line is primarily liable for the debts of his predecessor; for he is the most proper heir, and so must be discussed before any other can be pursued; next to him the heir of conquest, because he also succeeds to the univerfitas of the whole heritable rights which his predeceffor had acquired by fingular titles; then, the heir male, or of a marriage; for their propinquity of blood fubjects them more directly than any other heir of tailzie, who may possibly be a stranger; and who for that reason is not liable to be discussed, except for such of the predeceffor's debts or deeds as relate specially to the lands tailzied; as to which he is liable even before the heir of line. Heirs portioners are liable prarata for their predeceffors debts; but if any of them. prove infolvent, the creditor may, after difcuffing her, infift for her share against the rest, who will be liable in fo far as they are lucrate by the fuccession. Where an heir, liable fubsidiare, pays the predecessor's debt, he has relief against the heir who is more directly liable, in respect of whom he is not co-heir, but

frechs of

heirs.

704 Law of Scotland. Apparent heirs.

actual entry, called apparent beir. The bare right of apparency carries certain privileges with it. An apparent heir may defend his ancestor's titles against any third party who brings them under challenge. Tenants may fafely pay him their rents; and after they have once acknowledged him by payment, he may compel them to continue it; and the rents not uplifted by the apparent heir belong to his executors, upon

Yus deli Lerandi.

23. As an heir is, by his entry, fubjected univerfally to his ancestor's debts, apparent heirs have therefore a year (annus deliberandi) allowed to them from the anceftor's decease, to deliberate whether they will enter or not; till the expiry of which, though they may be charged by creditors to enter, they cannot be fued in any process founded upon such charge. Though declaratory actions, and others which contain no perfonal conclusion, may be pursued against the apparent heir, without a previous charge; action does not lie even upon thefe, within the year, if the heir cannot make the proper defences without incurring a paffive title. But judicial fales, commenced against an ancesthr, may by special act of sederunt be continued upon a citation of the heir, without waiting the year of deliberating. This annus deliberandi is computed, in the case of a posthumous heir, from the birth of such heir. An apparent heir, who, by immixing with the eftate of his ancestor, is as much subjected to his debts as if he had entered, can have no longer a right to deliberate whether he will enter or not.

Service of

24. All fervices proceed on brieves from the chancery, which are called brieves of inquest, and have been long known in Scotland. The judge, to whom the brief is directed, is required to try the matter by an inquest of 15 fworn men. The inquest, if they find the claim verified, must declare the claimant heir to the deceased, by a verdict or service, which the judge must attest, and return the brief, with the fervice proceeding on it, to the chancery; from which an extract is obtained called the retour of the fervice.

general and Special.

25. The fervice of heirs is either general or special. A general service vests the heir in the right of all heritable subjects, which either do not require seisin, or which have not been perfected by feifin in the perfon of the ancestor. A public right, therefore, according to the feudal law, though followed by feifin, having no legal effects till it be confirmed by the superior, must, as a perfonal right, be carried by a general fervice. A special service, followed by seifin, vests the heir in the right of the special subjects in which the

Entry by

ancestor died infeft. 26. If an heir, doubtful whether the estate of his investory. ancestor be fufficient for clearing his debts, shall, at any time within the annus deliberandi, exhibit upon oath a full inventory of all his ancestor's heritable subjects, to the clerk of the shire where the lands lie; or, if there is no heritage requiring feifin, to the clerk of the shire where he died; and if, after the same is subscribed by the sheriff or sheriff-depute, the clerk, and himself, and registered in the sheriss's books, the extract thereof felf might have completed an active title by entry. shall be registered within forty days after expiry of the annus deliberandi in the general register appointed for tromission be by order of law; or if it be founded on Nº 178.

22. Before an heir can have an active title to his an- that purpole, his subsequent entry will subject him no ceftor's rights, he must be entered by service and re- farther than to the value of such inventory. If the in- Scotland, tour. He who is intitled to enter heir, is, before his ventory be given up and registered within the time prescribed, the heir may serve on it, even after the year.

> 27. Creditors are not obliged to acquiesce in the value of the estate given up by the heir; but, if they be real creditors, may bring the eftate to a public fale, in order to discover its true value; since an estate is always worth what can be got for it. An heir by inventory, as he is in effect a truftee for the creditors, must account for that value to which the estate may have been improved fince the death of the anceftor, and he must communicate to all the creditors the eases he

has got in transacting with any one of them.

28. Practice has introduced an anomalous fort of Entry upon entry, without the interpolition of an inquelt, by the a precept of fole confent of the fuperior; who, if he be fatisfied that clare conthe person applying to him is the next heir, grants flat. him a precept (called of clare conftat, from the first words of its recital), commanding his bailie to infeft him in the subjects that belonged to his ancestor. The heir. by taking feifin on this precept, becomes paffive, liable for all the debts of his ancestor; and on the other hand, acquires an active title, as to the fubjects contained in the precept in questions with the superior or his heirs; and they may, when followed by seisin, afford a title of prescription: But as no person can be declared an heir by private authority, they cannot bar the true heir from entering after 20 years, as a legal entry would have done; the true heir, in fuch cafe, having it still in his power to fet afide that right, and obtain himself regularly served at any time within the years of prescription. Of the same nature is the entry Entry by by hasp and staple, commonly used in burgage tene- hasp ar ments of houses; by which the bailie, without calling an inquest, cognosces or declares a person heir, upon evidence brought before himfelf; and, at the fame time infefts him in the fubject, by the fymbol of the hasp and staple of the door. Charges given by creditors to apparent heirs to enter, fland in the place of an actual entry, fo as to support the creditor's diligence (clxxii. 2.).

29. A general service cannot include a special one; Aspecial fince it has no relation to any special subject, and car cludes a ge ries only that class of rights on which seifin has not neral one. proceeded; but a special service implies a general one of the same kind or character, and consequently carries even fuch rights as have not been perfected by feifin, Service is not required to establish the heir's right in titles of honour, or offices of the highest dignity; for

these descend jure sanguinis.

30. An heir, by immixing with his ancestor's estate Passive without entry, fubjects himself to his debts, as if he titles. had entered; or, in our law-phrase, incurs a passive title. The only passive title by which an apparent heir becomes liable univerfally for all his ancettor's debts, is gestio pro herede, or his behaving as none but an heir Gestio pro has right to do. Behaviour as heir is inferred from barede. the apparent heir's intromission, after the death of the ancestor, with any part of the lands or other heritable fubjects belonging to the deceased, to which he him-

31. This passive title is excluded, if the heir's infingular

Law of finoular tirles, and not as heir to the deceased. But an apparent heir's purchasing any right to his anceftor's effate, otherwife than at public roup (auction), or his possessing it in virtue of rights settled in the perfon of any near relation of the ancestor, to whom he himself may succeed as heir, otherwise than upon pur-

32. Behaviour as heir is also excluded, where the in-

tromission is small, unless an intention to defraud the ancestor's creditors be presumable from the circumstances attending it. Neither is behaviour inferred against the apparent heir, from the payment of his ancestor's debt, which is a voluntary act, and profitable to the creditors: nor by his taking out of brieves to ferve; for one may alter his purpose, while it is not completed: nor by his affuming the titles of honour belonging to his ancestor, or exercising an honorary office hereditary in the family; for these are rights annexed to the blood, which may be used without pro-per representation. But the exercising an heritable office of profit, which may pass by voluntary conveyance, and confequently is adjudgeable, may reasonably be thought to infer a passive title. Lastly, as passive titles have been introduced, merely for the fecurity of creditors; therefore, where questions concerning behaviour arise among the different orders of heirs, they are liable to one another no farther than in valorem of their feveral intromissions.

Mareditatie.

33. Another paffive title in heritage, may be incurred by the apparent heir's accepting a gratuitous right from the ancestor, to any part of the estate to which he himself might have succeeded as heir; and it is called praceptio hereditatis, because it is a taking of the fuccession by the heir before it opens to him by the death of his ancestor. If the right be onerous, there is no passive title: if the consideration paid for it does not amount to its full value, the creditors of the deceased may reduce it, in so far as it is gratuitous, but

34. The heir incurring this passive title is no farther liable, than if he had at the time of his acceptance entered heir to the granter, and fo subjected himself to the debts that were then chargeable against him; but with the posterior debts he has nothing to do, not even with those contracted between the date of the right and the infeftment taken upon it, and he is therefore called fucceffor titulo lucrativo post contractum

35. Neither of these passive titles takes place, unless the fubject intermeddled with or disponed be fuch as the intromitter or receiver would fucceed to as heir. In this also, these two passive titles agree, that the intromission in both must be after the death of the anceftor; for there can be no termini habiles of a passive title, while the ancestor is alive. But in the following respect they differ: Gestio pro herede, being a vicious passive title founded upon a quasi delict, cannot be objected against the delinquent's heir, if process has not been litifcontested while the delinquent himself was alive; whereas the fucceffor titulo lucrativo is by the acceptance of the disposition understood to have entered into a tacit contract with the granter's creditors, by which he undertakes the burden of their debts; and all actions founded on contract are transmissible against

Vol. IX. Part II.

25. An apparent heir, who is cited by the ancestor's Law of creditor in a process for payment, if he offers any peremptory defence against the debt, incurs a paffive Other raftitle; for he can have no interest to object against it, five titles. but in the character of heir. In the fame manner, the heir's not renouncing upon a charge to enter heir, infers it : But the effect of both thefe is limited to the special debt pursued for, or charged upon. This pasfive title, which is inferred from the heir's not renouncing, has no effect till decree pass against him; and even a renunciation offered after decree, if the decree be in absence, will intitle the heir to a suspension of all diligence against his person and estate, competent

37. By the principles of the feudal law, an heirwhen he is to complete his titles by special service, must necessarily pass over his immediate ancestor, e.g. his father, if he was not infeft; and ferve heir to that anceftor who was laft veft and feifed in the right, and in whose bareditas jacens the right must remain, till a title be connected thereto from him. As this bore hard upon creditors who might think themselves secure in contracting with a perfon whom they faw for fome time in the possession of an estate, and from thence concluded that it was legally vested in him; it is therefore provided by act 1695, that every person, passing over his immediate anceltor who had been three years in possession, and ferving heir to one more remote. shall be liable for the debts and deeds of the person interjected, to the value of the estate to which he is ferved. This being correctory of the feudal maxims, has been firictly interpreted, fo as not to extend to the gratuitous deeds of the person interjected, nor to the case where the interjected person was a naked fiar, and poffeffed only civilly through the liferenter.

38. Our law, from its jealoufy of the weakness of Reduction by the heir mankind while under fickness, and of the importunity ex capite of friends on that occasion, has declared that all deeds lettiaffecting heritage, if they be granted by a person on deathbed, (i. e. after contracting that fickness which ends in death), to the damage of the heir, are ineffectual, except where the debts of the granter have laid him under a necessity to alien his lands. As this law of deathbed is founded folely in the privilege of the heir, deathbed-deeds, when confented to by the heir, are not reducible. The term properly opposed to deathbed is liege pouflie, by which is understood a flate of health; and it gets the name, because persons in health have the legitima potestas, or lawful power, of

disposing of their property at pleasure 39. The two extremes being proved, of the granter's What come fickness immediately before figuing, and of his death strutes a following it, though at the greatest distance of time, deed, did, by our former law, found a prefumption that the deed was granted on deathbed, which could not have been clided but by a positive proof of the granter's convalefcence; but now the allegation of deathbed is also excluded, by his having lived 60 days after figning the deed. The legal evidence of convalescence is the granter's having been, after the date of the deed. at kirk OR market unsupported; for a proof of either will fecure the deed from challenge. The going to kirk or market must be performed when the people are met together in the church or churchyard for any public meeting, civil or ecclefiaftical, or in the mar-

ket-place at the time of public market. No other proof of convaleicence is receivable, because at kirk and market there are always prefent unfuspected witnesses, which we can hardly be fure of in any other

To what

40. The privilege of fetting afide deeds ex capite ledi, is competent to all heirs, not to heirs of line only, reduction is but of conquest, tailzie, or provision; not only to the immediate, but to remoter heirs, as foon as the fucceffion opens to them. But, where it is confented to or ratified by the immediate heir, it is secured against all challenge, even from the remoter. Yet the immediate heir cannot, by any antecedent writing, renounce his right of reduction, and thereby give strength to deeds that may be afterwards granted in letto to his hurt; for no private renunciation can authorife a perfon to act contrary to a public law; and fuch renunciation is prefumed to be extorted through the fear of exheredation. If the heir should not use this privilege of reduction, his creditor may, by adjudication, transfer it to himself; or he may, without adjudication, reduce the deed, libelling upon his interest as creditor to the heir : But the granter's creditors have no right to this privilege, in regard that the law of deathbed was introduced, not in behalf of the granter himfelf, but of his heir.

What

41. The law of deathbed firikes against dispositions rights may of every subject to which the heir would have succeedbe thus fet ed, or from which he would have had any benefit, had it not been fo disponed. Deathbed-deeds granted in consequence of a full or proper obligation in liege poufie, are not subject to reduction; but, where the antecedent obligation is merely natural, they are reducible. By ftronger reason, the deceased cannot, by a deed merely voluntary, alter the nature of his estate on deathbed to the prejudice of his heir, fo as from heritable to make it moveable; but if he should, in liege pouflie, exclude his apparent heir, by an irrevocable deed containing referved faculties, the heir cannot be heard to quarrel the exercise of these faculties on death-bed.

42. In a competition between the creditors of the deceased and of the heir, our law (act 1661) has juftly preferred the creditors of the deceased, as every man's estate ought to be liable, in the first place, for his own debt. But this preference is, by the statute, limited to the case where the creditors of the deceafed have used diligence against their debtor's estate, within three years from his death; and therefore the heir's creditors may, after that period, affect it for their own payment. All dispositions by an heir, of the ancestor's estate, within a year after his death, are null, in fo far as they are huntful to the creditors of the ancestor. This takes place, though these creditors should have used no diligence, and even where the dispositions are granted after the year: It is thought they are ineffectual against the creditors of the deceased who have used diligence within the

three years.

SECT. XXI. Of Succession in Moveables.

elxxxi. Moveable fucceffion. by law.

In the fuccession of moveable rights, it is an univerfal rule, that the next in degree to the deceased (or next of kin) fucceeds to the whole; and if there are

heritage, of the eldeft fon over the younger, or of males Law of over females. Neither does the right of representa- Scotland. tion (explained no clxxx. 4.) obtain in the fuccession of moveables, except in the fingle case of a competition between the full blood and the half blood; for a niece by the full blood will be preferred before a brother by the half blood, though she is by one degree more remote from the deceased than her uncle. Where the estate of a person deceased confists partly of heritage, and partly of moveables, the heir in the heritage has no share of the moveables, if there are others as near in degree to the deceased as himself: But where the heir, in fuch case, finds it his interest to renounce his exclusive claim to the heritage, and betake himself to his right as one of the next of kin, he may collate or communicate the heritage with the others, who in their turn must collate the moveables with him; so that the whole is thrown into one mass, and divided equally among all of them. This doctrine holds, not only in the line of descendants, but of collaterals; for it was introduced, that the heir might in no case be worse than the other next of kin.

2. One may fettle his moveable effate upon whom he Succeffion pleases, excluding the legal successor, by a testament; in movewhich is a written declaration of what a person wills to ables by debe done with his moveable estate after his death. No fination, testamentary deed is effectual till the death of the testator; who may therefore revoke it at pleafure, or make a new one, by which the first loses its force, according to the rule, voluntas testatoris est ambulatoria usque ad mortem; and hence testaments are called last or latter wills. Testaments, in their strict acceptation, must contain a nomination of executors, i. e. of persons appointed to administer the succession according to the will of the deceased: Yet nothing hinders one from making a settlement of moveables, in favour of an universal legatee, though he should not have appointed executors; and on the other part, a testament where executors are appointed is valid, though the person who is to have the right of fuccession should not be named. In this last case, if the executor nominated be a stranger, i.e. one who has no legal interest in the moveable estate, he is merely a truftee, accountable to the next of kin; but he may retain a third of the dead's part (explained par. 6.) for his trouble in executing the testament; in payment of which, legacies, if any be left to him, must be imputed. The heir, if he be named executor, has right to the third as a stranger; but if one be named who has an interest in the legal succession, he has no allowance, unless such interest be less than a third. Nuncupative or verbal testaments are not, by the law of Scotland, effectual for supporting the nomination of an executor, let the subject of the fuccession be ever fo small; But verbal legacies, not exceeding L. 100 Scots, are fuftained: and even where they are granted for more, they are ineffectual only as to the excefs.

3. A legacy is a donation by the deceased, to be Legacy paid by the executor to the legatee. It may be granted either in the teflament or in a separate writing. Legacies are not due till the granter's death; and confequently they can transmit no right to the executors of the legatee, in the event that the granter furvives him. A case occurred some years ago, whese two or more equally near, all of them succeed by equal a testator left a legacy payable when the legatee arriparts, without that prerogative, which takes place in ved at a certain age. The legatee furvived the tefta-

4. Legacies, where they are general, i. e. of a certain fum of money indefinitely, give the legatee no right in any one debt or subject; he can only insist in a personal action against the executor, for payment out of the tellator's effects. A special legacy, i. e. of a particular debt due to the deceased, or of a particular fubject belonging to him, is of the nature of an affig. nation, by which the property of the special debt or fubiect vefts, upon the testator's death, in the legatee, who can therefore directly fue the debtor or poffeffor: Yet as no legacy can be claimed till the debts are paid, the executor must be cited in such process, that it may be known, whether there are free effects sufficient for answering the legacy. Where there is not enough for payment of all the legacies, each of the general legatees must fuffer a proportional abatement : But a special legatee gets his legacy entire, though there should be nothing over for payment of the rest; and, on the contrary, he has no claim, if the debt or subject bequeathed should perish, whatever the extent of the free executry may be.

5. Minors, after puberty, can test without their cu-Who can rators, wives without their husbands, and persons in-

under what terdicted without their interdictors: but bastards canrestrictions not test, except in the cases afterwards set forth, No clxxii. 3. As a certain share of the goods, falling under the communion that is consequent on marriage, belongs, upon the husband's decease, to his widow, jure relide, and a certain share to the children, called the legitime, portion-natural, or bairns part of gear; one who has a wife or children, though he be the absolute administra- familia, and so are excluded from any farther share of tor of all these goods during his life, and consequently may alien them by a deed inter vivos, in liege pouftie, even gratuitously, if no frandulent intention to disappoint the wife or children shall appear, yet cannot impair their shares gratuitously on death-bed; nor can he dispose of his moveables to their prejudice by testament, though it should be made in liege pouflie; since testaments do not operate till the death of the testator. at which period the division of the goods in communion have their full effect in favour of the widow and chil-

Division of a teftamicht.

6. If a person deceased leaves a widow, but no child, his testament, or, in other words, the goods in communion, divide in two: one half goes to the widow; the other is the dead's part, i.e. the absolute property of the deceased, on which he can test, and which falls to his next of kin, if he dies inteffate. Where he leaves children, one or more, but no widow, the children get one half as their legitime: the other half is the dead's part; which falls also to the children, if the father has not tefted upon it. If he leaves both widow and children, the division is tripartite: the wife takes one third by herfelf; another falls, as legitime, to the children equally among them, or even to an only child, though he should succeed to the heritage; the remaining third is

Law of tor, but died before the legacy was payable. It was rules of fociety, fince no legitime is truly due on a mor Law of found, chiefly upon the authority of the Roman law, ther's death; yet it is in practice tripartite; two thirds Scotland. that the legacy vefted in the legatee a morte teflatoris, remain with the furviving father, as if one third were and upon his decease was due to the legatee's next of due to him proprio nomine, and another as administrator of the legitime for his children; the remaining third, being the wife's share, goes to her children, whether of that or any former marriage; for they are all equally her next of kin-

7. Before a tellament can be divided, the debts ow. What debts ing by the deceased are to be deducted; for all execu. affect the try must be free. As the husband has the full power of executry. burdening the goods in communion, his debts affect the whole, and fo leffen the legitime and the share of the relict, as well as the dead's part. His funeral charges. and the mournings and alimony due to the widow, are considered as his proper debts; but the legacies, or other gratuitous rights granted by him on death-bed. affect only the dead's part. Bonds bearing interest, due by the deceased, cannot diminish the relict's share, because such bonds, when due to the deceased, do not increase it. The funeral charges of the wife predeceafing, fall wholly on her executors who have right to her share. Where the deceased leaves no family, neither husband, wife, nor child, the testament suffers no division, but all is the dead's part.

8. The whole iffue of the hufband, not only by that. marriage which was diffolved by his death, but by any former marriage, has an equal interest in the legitime; otherwise the children of the first marriage would be cut out, as they could not claim the legitime during their father's life. But no legitime is due, (1.) Upon the death of a mother. (2.) Neither is it due to grandchildren, upon the death of a grandfather. Nor. (3.) To children forisfamiliated, i. e. to fuch as, by having renounced the legitime, are no longer confidered as in the moveable estate than they have already received.

9. As the right of legitime is strongly founded in Repuncianature, the renunciation of it is not to be inferred by tion of the implication. Renunciation by a child of his claim of legitime. legitime has the same effect as his death, in savour of the other children intitled thereto; and confequently the share of the renouncer divides among the rest; but he does not thereby lose his right to the dead's part, if he does not also renounce his share in the father's executry. Nay, his renunciation of the legitime, where he is the only younger child, has the effect to convert the whole subject thereof into dead's part, which will therefore fall to the renouncer himself as next of kin, if the heir be not willing to collate the heritage with him. Yet it has been found that the renunciation of the only younger child made the whole legitime accrue to the heir without collation.

10. For preserving an equality among all the children who continue intitled to the legitime, we have a among dopted the Roman doctrine of collatio bonorum; where-younger by the child, who has got a provision from his father, children. is obliged to collate it with the others, and impute it towards his own share of the legitime; but if from the deed of provision, the father shall appear to have intended it as a pracipuum to the child, collation is exthe dead's part. Where the wife predeceases without cluded. A child is not bound to collate an heritable children, one half is retained by the husband, the o- subject provided to him, because the legitime is not imther falls to her next of kin: Where she leaves children, paired by such provision. As this collation takes place the division ought also to be bipartite, by the common only in questions among children who are intitled to

Law of the legitime, the relict is not bound to collate donations confirming, he may affect the moveables of the de- Law of given her by her hufband, in order to increase the legitime; and on the other part, the children are not obliged to collate their provisions, in order to increase her

Confirmation,

11. As an heir in heritage must complete his titles by entry, fo an executor is not vested in the right of the moveable estate of the deceased without confirmation. court, impowering an executor, one or more, upon making inventory of the moveables pertaining to the deceased, to recover, possess, and administer them, either in behalf of themselves, or of others interested therein. Testaments must be confirmed in the commissariot where the deceased had his principal dwelling house at his death. If he had no fixed refidence, or died in a foreign country, the confirmation must be at Edinburgh, as the commune forum ; but if he went abroad with an intention to return, the commissariot within which he refided, before he left Scotland, is the only proper

12. Confirmation proceeds upon an edict, which is affixed on the door of the parish-church where the deceafed dwelt, and ferves to intimate to all concerned the day of confirmation, which must be nine days at least after publishing the edict. In a competition for the office of executor, the commissary prefers, primo loco, the person named to it by the deceased himself, whose nomination he ratifies or confirms, without any previous decerniture: this is called the confirmation of a testament-testamentary. In default of an executor named by the deceased, univerfal disponees are by the present practice preserred; after them, the next of kin; then the relict; then creditors; and, laftly, special legatees. All these must be decerned executors, by a fentence called a decree-dative; and if afterwards they incline to confirm, the commiffary authorifes them to administer, upon their making inventory, and giving fecurity to make the subject thereof forthcoming to all having interest; which is called the confirmation of a testament dative.

Confirmaditor.

13. A creditor, whose debtor's testament is already tion qua ex. confirmed, may fue the executor, who holds the office ecutor-cre for all concerned, to make payment of his debt. Where there is no confirmation, he himself may apply for the office, and confirm as executor-creditor; which intitles him to fue for and receive the fubject confirmed, for his own payment: and where one applies for a confirmation as executor-creditor, every co-creditor may apply to be conjoined with him in the office. As this kind of confirmation is fimply a form of diligence, creditors are exempted from the necessity of confirming more than the amount of their debts.

14. A creditor, whose debt has not been constituted or his claim not closed by decree, during the life of his debtor, has no title to demand directly the office of executor qua creditor: but he may charge the next of kin, who stands off, to confirm, who must either renounce within twenty days after the charge, or be liable for the debt; and if the next of kin renounces, the purfuer may constitute his debt, and obtain a decree cognitionis caufa. against the hareditas jaceus of the moveables, upon which he may confirm as executor-creditor to the deceased. Where one is creditor, not to the deceased, but to his next of kin who stands off from ceased, by obtaining himself decerned executor-dative Scotland. to the deceased, as if he were creditor to him, and not to his next of kin.

15. Where an executor has either omitted to give up Confirmsany of the effects belonging to the deceased in invention ad omigtory, or has estimated them below their just value, there a, &c. is place for a new confirmation, ad omiffa, vel male appretiera, at the fuit of any having interest; and if it appears that he has not omitted or undervalued any fubject dolofe, the commissary will ordain the subjects omitted, or the difference between the estimations in the principal testament and the true values, to be added thereto; but if dole shall be prefumed, the whole fubject of the testament ad omissa vel male appretiata, will

be carried to him who confirms it, to the exclusion of the executor in the principal testament.

16. The legitime and relict's share, because they are Legitime. rights arising ex lege, operate ipfo jure, upon the father's Je. transdeath, in favour of the relict and children; and confe-mit withquently pass from them, though they should die before mations confirmation, to their next of kin : whereas the dead's part, which falls to the children or other next of kin in the way of fuccession, remains, if they should die before confirming, in bonis of the first deceased; and so does not descend to their next of kin, but may be confirmed by the person who, at the time of confirmation, is the next of kin to the first deceased. Special affignations, though neither intimated nor made public during the life of the granter, carry to the affiguee the full right of the subjects affigned, without confirmation. Special legacies are really affignations, and fo fall under this rule. The next of kin, by the bare possession of the ipsa corpora of moveables, acquires the property thereof without confirmation, and transmits it to his execu-

17. The confirmation of any one subject by the next Partial conof kin, as it proves his right of blood, has been ad-firmation. judged to carry the whole executry out of the testament of the deceased, even what was omitted, and to transmit all to his own executors. The confirmation of a stranger, who is executor nominated, as it is merely a truit for the next of kin, has the effect to establish the right of the next of kin to the subjects confirmed, in the fame manner as if himfelf had con-

18. Executry, though it carries a certain degree of Executors. representation of the deceased, is properly an office : how far executors therefore are not subjected to the debts due liable. by the deceased, beyond the value of the inventory; but, at the fame time, they are liable in diligence for making the inventory effectual to all having interest. An executor-creditor who confirms more than his debt amounts to, is liable in diligence for what he confirms. Executors are not liable in interest, even upon such bonds recovered by them as carried interest to the deceased, because their office obliges them to retain the fums they have made effectual, in order to a distribution thereof among all having interest. This holds though they should again lend out the money upon in-

terest, as they do it at their own risk. 19. There are certain debts of the deceafed called In what privileged debts, which were always preferable to every cafes they other. Under that name are comprehended, medicines without furnished to the deceased on deathbed, physicians fees sentence.

Scotland. house, and his servants wages for the year or term current at his death. These the executors are in safety to pay on demand. All the other creditors, who either obtain themselves confirmed, or who cite the executor already confirmed, within fix months after their debtor's death, are preferred, pari paffu, with those who have done more timely diligence; and therefore no executor can either retain for his own debt, or pay a teltamentary debt, fo as to exclude any creditor, who shall use diligence within the fix months, from the benefit of the pari paffu preference; neither can a decree for payment of debt be obtained, in that period, against an executor, because, till that term be elapsed, it cannot be known how many creditors may be intitled to the fund in his hands. If no diligence be used within the fix months, the executor may retain for his own debt, and pay the refidue primo venienti. Such creditors of the deceased as have used diligence within a year after their debtor's death, are preferable on the fubject of his testament to the creditors of his next of

20. The only passive title in moveables is vitious inomission. tromission; which may be defined, an unwarrantable intermeddling with the moveable effate of a perfon deceased, without the order of law. This is not confined, as the paffive titles in heritage are, to the perfons interested in the succession, but strikes against all intromitters whatever. Where an executor confirmed intromits with more than he has confirmed, he incurs a paffive title; fraud being in the common cafe prefumed from his not giving up in inventory the full subject inmed, where the repositories of a dying person are not fealed up, as foon as he becomes incapable of fenfe, by his nearest relations; or, if he dies in a house not his own, they must be fealed by the master of such house, and the keys delivered to the judge-ordinary. to be kept by him, for the benefit of all having in-

> 21. The paffive title of vitious intromission does not take place where there is any probable title or circumstance that takes off the prefumption of fraud. In confequence of this rule, necessary intromission, or custodia caufa, by the wife or children, who only continue the possession of the deceased, in order to preserve his goods And, upon the same principle, an intromitter, by confirming himfelf executor, and thereby fubjecting himfelf to account, before action be brought against him on the paffive titles, purges the vitiofity of his prior intromiffion: and where the intromitter is one who is interested in the fuccession, e. g. next of kin, his confirmation, at any time within a year from the death of the deceased, will exclude the passive title, notwithflanding a prior citation. As this passive title was intended only for the fecurity of creditors, it cannot be fued upon by legatees; and fince it arifes ex deliato, it cannot be pleaded against the heir of the intromitter. As in delicts, any one of many delinquents may be fubjected to the whole punishment, so any one of many intromitters may be fued in folidum for the purfuer's debt, without calling the rest; but the intromitter who pays, has an action of relief against the others for their thare of it. If the intromitters are fued jointly, they

W. Law of during that period, funeral charges, and the rent of his are liable, not pro rata of their feveral intromissions, but pro virili.

28. The whole of a debtor's estate is subjected to the Mutual repayment of his debts; and therefore, both his heirs and lief betwice executors are liable for them, in a question with credi- the heirand tors: but as fuccession is by law divided into the he-executor. ritable and the moveable estate, each of these ought, in a question between the feveral fuccessors, to bear the burdens which naturally affect it. Action of relief is accordingly competent to the heir who has paid a moveable debt, against the executor; and vice verfa. This relief is not cut off by the deceased's having disponed either his land-effate or his moveables, with the burden of his whole debts; for fuch burden is not to be construed as an alteration of the legal succession, but merely as a farther fecurity to creditors, unless the contrary shall be presumed from the special style of the

IV. OF LAST HEIRS AND BASTARDS.

By our ancient practice, feudal grants taken to the Where vaffal, and to a special order of heirs, without settling there is no the last termination upon beirs what foever, returned to king sucthe fuperior, upon failure of the special heirs therein ceeds. contained: but now that feus are become patrimonial rights, the fuperior is, by the general opinion, held to be fully divested by such grant, and the right descends to the vaffai's heirs at law. And even where a vaffal dies without leaving any heir who can prove the remotest propinquity to him, it is not the superior, as the old law flood, but the king, who fucceeds as latt heir, both in the heritable and moveable effate of the deceased, in contequence of the rule, Quod nullius est, cedit domino Regi.

2. If the lands, to which the king fucceeds, be holden immediately of himfelf, the property is confolidated with the fuperiority, as if refignation had been made in the fovereign's liands. If they are holden of a fubject, the king, who cannot be vaffal to his own fubject, names a donatory; who, to complete his title, must obtain a decree of declarator; and thereafter he is presented to the superior, by letters of presentation from the king under the quarter-feal, in which the fuperior is charged to enter the donatory. The whole estate of the deceased is, in this case, subjected to his debts, and to the widow's legal provisions. Neither the king nor his donatory is liable beyond the value of the fuccession. A person who has no heir to succeed to him, cannot alien his heritage in lello, to the prejudice of the king, who is intitled to fet afide fuch deed, in the character of ultimus heres.

3. A bastard can have no legal heirs, except those of King fuehis own body; fince there is no fuccession but by ceeds as ufthe father, and a bastard has no certain father. The timus bares king therefore fucceeds to him, failing his lawful iffue, to the baas last heir. Though the bastard, as absolute proprietor of his own estate, can dispose of his heritage in liege pouftie, and of his moveables by any deed inter vivos; yet he is disabled, ex defectu natalium, from bequeathing by teflament, without letters of legitimation from the fovereign. If the baftard has lawful children, he may test without fuch letters, and name tutors and curators to his iffue. Letters of legitimation, let their clauses be ever so strong, cannot enable the

T. Law of bastard to succeed to his natural father, to the exclu-Scotland., fion of lawful heirs.

Baftards incapable seffion.

4. The legal rights of fuccession, being founded in marriage, can be claimed only by those who are born in of legal, but lawful marriage; the iffue therefore of an unlawful not of de- marriage are incapable of fuccession. A bastard is excluded, (1.) From his father's fuccession; because law knows no father who is not marked out by marriage. (2.) From all heritable succession, whether by the father or mother; because he cannot be pronounced lawful heir by the inquest, in terms of the brief. And, (3.) From the moveable succession of his mother; for though the mother be known, the bastard is not her lawful child, and legitimacy is implied in all fuccession conferred by law. A baftard, though he cannot fucceed jure fanguinis, may succeed by destination, where he is specially called to the succession by an entail or testament. 5. Certain perfons, though born in lawful marriage,

Aliens cannot fucceed are incapable of fuccession. Aliens are, from their alrights;

legiance to a foreign prince, incapable of fucceeding in feudal rights, without naturalization. Children born in a foreign flate, whose fathers were natural born subnor Papifts, jects, and not attainted, are held to be natural born fubjects. Persons educated in, or professing, the Popish religion, if they shall neglect, upon their attaining the age of 15, to renounce its doctrines by a figned declaration, cannot succeed in beritage; but must give place to the next Protestant heir, who will hold the estate irredeemably, if the Popish heir does not, within ten years after incurring the irritancy, fign the formula prefcribed by the ftatute 1700, c. 3.

C H A P.

Of ACTIONS.

HITHERTO of Perfons and Rights, the two first objects of law: Actions are its third object, whereby persons make their rights effectual.

SECT. I. Nature, division, &c. of actions. clxxxiii.

An action. what.

An action may be defined, A demand regularly made and infifted in, before the judge competent, for the attaining or recovering of a right; and it fuffers feveral divisions, according to the different natures of

the rights purfued upon.

Division of actions.

2. Actions are either real or personal. A real action is that which arises from a right in the thing itself, and which therefore may be directed against all possessions of that thing: thus, an action for the recovery, even of a moveable subject, when founded on a jus in re, is in the proper acceptation real; but real actions are, in vulgar speech, confined to such as are directed against heritable subjects. A personal action is founded only on an obligation undertaken for the performance of some fact, or the delivery of some subject; and therefore can be carried on against no other than the person obliged, or his heirs.

3. Actions, again, are either ordinary or rescissory. All actions are, in the fense of this division, ordinary, which are not rescissory. Rescissory actions are divided, (1.) Into actions of proper improbation. (2.)

Actions of reduction improbation. (3.) Actions of Law of simple reduction. Proper improbations, which are Scotland. brought for declaring writings falle or forged, are noticed below, N° clxxxvi, 32. Reduction-improbation improbation is an action, whereby a perfon who may be hut or after dion. it in court, in order to have it fet afide, or its effect ascertained, under the certification that the writing, if not produced, shall be declared false and forged. This certification is a fiction of law, introduced that the production of writings may be the more effectually forced, and therefore it operates only in favour of the purfuer. Because the summons in this action proceeds on alleged grounds of falshood, his majesty's advocate, who is the public profecutor of crimes, must concur

4. As the certification in this process draws after it fo heavy confequences, two terms are affigned to the defenders for production. After the fecond term is elapfed, intimation must be made judicially to the defender, to fatisfy the production within ten days; and till these are expired, no certification can be pronounced. Certification cannot pass against deeds recorded in the books of fession, if the defender shall, before the fecond term, offer a condescendence of the dates of their registration, unless falsehood be objected: in which case, the original must be brought from the record to the court. But an extract from the inferior court is no bar to certification; the principal writing must be laid before the court of fession on a proper warrant.

5. In an action of simple reduction the certification Simple is only temporary, declaring the writings called for reduction null, until they be produced; fo that they recover their full force after production, even against the purfuer himself; for which reason, that process is now feldom used. Because its certification is not so severe as in reduction improbation, there is but one term affigned to the defender for producing the deeds called

6. The most usual grounds of reduction of wri-Grounds tings are, the want of the requifite folemnities; that reduction the granter was minor, or interdicted, or inhibited; or that he figned the deed on death bed, or was compelled or frightened into it, or was circumvented; or that he granted it in prejudice of his lawful creditors.

7. In reductions on the head of force, or fear, or fraud and circumvention, the purfuer must libel the particular circumstances from which his allegation is to be proved. Reduction is not competent upon eyery degree of force or fear; it must be such as would shake a man of constancy and resolution. Neither is it competent, on that fear which arises from the just authority of husbands or parents over their wives or children, nor upon the fear arifing from the regular execution of lawful diligence by caption, provided the deeds granted under that fear relate to the ground of debt contained in the diligence; but if they have no relation to that debt, they are reducible ex metu.

8. Alienations granted by debtors after contracting of lawful debts, in favour of conjunct or confident persons, without just and necessary causes, and without a just price really paid, are, by the act 1621, declared to be null. One is deemed a prior creditor, whose ground of debt existed before the right granted

accounted conjunct, whose relation to the granter is of any of his moveables, or a decree of adjudication fo near, as to bar them from judging in his cause. Confident persons are those who appear to be in the granter's confidence, by being employed in his affairs, or about his person; as a doer, steward, or domestic

q. Rights, though gratuitous, are not reducible, if the granter had, at the date thereof, a sufficient fund for the payment of his creditors. Provisions to children are, in the judgment of law, gratuitous; fo that their effect, in a question with creditors, depends on the folvency of the granter: but fettlements to wives, either in marriage-contracts, or even after marriage, are onerous, in fo far as they are rational; and confequently are not reducible, even though the grant-er was infolvent. This rule holds also in rational tochers contracted to husbands: But it must, in all cases, be qualified with this limitation, if the insolvency of the granter was not publicly known; for if it was, fraud is prefumed in the receiver of the right, by contracting with the bankrupt.

10. The receiver of the deed, if he be a conjunct or confident person, must instruct or support the onerous cause of his right, not merely by his own oath, but by fome circumstances or adminicles. But where a right is granted to a stranger, the narrative of it expressing an onerous cause, is sufficient per se to secure

it against reduction.

11. All voluntary payments or rights made by a bankrupt to one creditor, to disappoint the more timeous diligence of another, are reducible at the inflance of that creditor who has used the prior diligence. A creditor, though his diligence be but begun by citation, may infift in a reduction of all posterior voluntary rights granted to his prejudice; but the creditor who neglects to complete his begun diligence within a reasonable time, is not intitled to reduce any right granted by the debtor, after the time that the diligence is confidered as abandoned.

12. A prohibited alienation, when conveyed by the receiver to another who is not privy to the fraud, fubfifts in the person of the bona fide purchaser. In the case of moveable rights, this nullity is receivable by exception; but it must be declared by reduction,

where the right is heritable.

13. By act 1696, c. 5. all alienations by a bankrupt, within 60 days before his bankruptcy, to one creditor in preference to another, are reducible, at the inftance even of fuch co creditors as had not used the least step of diligence. A bankrupt is there de feribed by the following characters; diligence used against him by horning and caption; and infolvency, joined either with impriforment, retiring to the fanctuary, ableonding, or forcibly defending himself from diligence. It is sufficient that a caption is raised against the debtor though it be not executed, provided he has retired to thun it. And by the late bankrupt statute 23d Geo. III. it is declared, that in all actions and questions arising upon the construction and effect of the act 1696; when a debtor is out of Scotland, or not liable to be imprisoned by reason of privilege or personal protection, a charge of horning executed against him, together with either an arrest- contested in the delinquent's lifetime, may be conti-

"Law of by the debtor; though the written voucher of the ment of any of his personal effects not loosed or difdebt should bear a date posterior to it. Persons are charged within fifteen days, or a pointing executed Scotland. of any part of his heritable effate, or fequestration by the act of a proper court, of all or any part of his estate or effects, heritable or moveable, for payment of debt, shall, when joined with insolvency, be held as fufficient proof of notour bankruptcy; and from and after the last step of fuch diligence, the said debtor, if infolvent, shall be held bankrupt. It is provided (by faid act 1695), that all heritable bonds or rights on which feilin may follow, shall be reckoned, in a question with the granter's other creditors upon this act, to be of the date of the feifin following thereon. But this act was found to relate only to fecurities for former debts, and not to nova debita.

14. Actions are divided into rei persecutoria, and Actions eipanales. By the first, the purfuer infilts barely to re- ther rei percover the subject that is his, or the debt due to him : fecutoria, oz and this includes the damage fultained; for one is as penal. truly a fufferer in his patrimonial interest by that damage, as by the lofs of the fubject itself. In penal actions, which always arife ex deliclo, fomething is also

demanded by way of penalty.

15. Actions of spuilzie, ejection, and intrusion, are spuilzie, penal. An action of spuilzie is competent to one difpossessed of a moveable subject violently, or without order of law, against the person dispossessing; not only for being reftored to the poffession of the subject, if extant, or for the value, if it be deftroyed, but also for the violent profits, in case the action be brought within three years from the spoliation. Ejection and intrufion arc, in heritable fubjects, what fpuilzie is in moveables. The difference between the two first is, that in ejection, violence is used; whereas the intruder enters into the void possession, without either a title from the proprietor, or the warrant of a judge. The actions arifing from all the three are of the same general na-

16. The action of contravention of law-borrows is Contravenalso penal. It proceeds on letters of law-borrows, tion of laws (from borgh, a cautioner), which contain a warrant to borrows, charge the party complained upon, that he may give fecurity not to hurt the complainer in his person, family, or estate. These letters do not require the previous citation of the party complained upon, because the caution which the law requires is only for doing what is every man's duty; but, before the letters are executed against him, the complainer must make oath that he dreads bodily harm from him. The penalty of contravention is afcertained to a special sum, according to the offender's quality; the half to be applied to the tifk, and the half to the complainer. Contravention is not incurred by the uttering of reproachful words, where they are not accompanied, either with acts of violence, or at least a real injury; and as the action is penal, it is elided by any probable ground of excuse.

17. Penalties are the confequences of delict, or Penal actransgression; and as no heir ought to be accountable tions, who for the delict of his ancestor, farther than the injured ther transperson has really suffered by it, penal actions die with missible athe delinquent, and are not transmissible against heirs, pursuer, Yet the action, if it has been commenced and litif-

Scotland, die during the dependence. Some actions are rei perfecutoria on the part of the pursuer, when he infifts for fimple restitution; which yet may be penal in respect of the defender: e.g. the action on the paffive title of vitious intromission, by which the pursuer frequent-

ly recovers the debt due to him by the deceased, tho' it should exceed the value of the goods intermeddled

with by the defenders.

· Citory.

of mails

#ctitory.

Actions pe-18. The most celebrated divition of actions in our law is into petitory, possessory, and declaratory Petitory actions are those, where fomething is demanded from the defender, in confequence of a right of property, or of credit in the purfuer : Thus, actions for reftitution of moveables, actions of poinding, of forthcoming, and indeed all perfonal actions upon contracts or quafipossessions, contracts, are petitory. Possessory actions are those

which are founded, either upon possession alone, as fpuilzies; or upon possession joined with another title, as removings; and they are competent either for getting into poffession, for holding it, or for recovering it; analogous to the interdicts of the Roman law,

quorum bonorum, uti possidetis, and unde vi-

of molesta-16. An action of molestation is a possessory action, competent to the proprietor of a land-effate, against those who disturb his possession. It is chiefly used in questions of commonty, or of controverted marches. Where a declarator of property is conjoined with a process of molestation, the fession alone is competent to the action. Actions on brieves of perambulation, have the fame tendency with molestations, viz. the fet-

tling of marches between conterminous lands. 20. The actions of mails and duties is fometimes

and duties, petitory, and fometimes possessory. In either case, it is directed against the tenants and natural possessors of land-eflates, for payment to the purfuer of the rents remaining due by them for past crops, and of the full rent for the future. It is competent, not only to a proprietor whose right is perfected by feifin, but to a fimple disponce, for a disposition of lands includes a right to the mails and duties; and confequently to an adjudger, for an adjudication is a judicial disposition. In the petitory action, the purfuer, fince he founds upon right, not possession, must make the proprietor, from whom the tenants derive their right, party to the fuit; and he must support his claim by titles of property or diligences, preferable to those in the person Postesfory, of his competitor. In the possession, the pursuer who libels that he, his ancestors, or authors, have been seven years in possession, and that therefore he has the benefit of a possessfory judgment, need produce no other title than a feifin, which is a title fufficient to make

the poffession of heritage lawful; and it is enough, if he calls the natural possessors, though he should neglect the proprietor. A possession judgment founded on seven years possession, in consequence either of a Poffeffory jadgment. feifin or a tack, has this effect, that though one should claim under a title preferable to that of the poffeffor. he cannot compete with him in the possession, till in a formal process of reduction he shall obtain the possesfor's title declared void.

21. A declaratory action is that, in which fome right gory action, is craved to be declared in favour of the purfuer, but nothing fought to be paid or performed by the defender, fuch as declarators of marriage, of irritancy, of

Nº 178.

Law of nued against the heir, though the delinquent should expiry of the legal reversion, &c. Under this class may be also comprehended rescissory actions, which, without any personal conclusion against the defender. tend fimply to fet afide the rights or writings libelled. in confequence of which a contrary right or immunity arifes to the purfuer. Decrees upon actions that are properly declaratory confer no new right; they only declare what was the purfuer's right before, and fo have a retrospect to the period at which that right first commenced. Declarators, because they have no perfonal conclusion against the defender, may be purfued against an apparent heir without a previous charge gi-

ven him to enter to his ancestor; unless where special

22. An action for proving the tenor, whereby a wri- Action for ting, which is destroyed or amissing, is endeavoured to proving the be revived, is in effect declaratory. In obligations that tenor. are extinguishable barely by the debtor's retiring or cancelling them, the purfuer, before a proof of the tenor is admitted, must condescend on such a casus amisfionis, or accident by which the writing was dellroyed, as shows it was lost when in the creditor's possession; otherwise bonds that have been cancelled by the debtor on payment, might be reared up as fill fublifting against him : But in writings which require contrary deeds to extinguish their effect, as affignations, dispo-

fitions, charters, &c. it is fufficient to libel that they were loft, even cafu fortuito.

W.

23. Regularly, no deed can be revived by this action, Adminider without some adminicle in writing, referring to that in writing. which is libelled : for no written obligation ought to be raifed up barely on the testimony of witnesses. If these adminicles afford sufficient conviction that the deed libelled did once exift, the tenor is admitted to be proved by witnesses, who must depose, either that they were prefent at figning the deed, or that they afterwards faw it duly subscribed. Where the relative writings contain all the fubftantial claufes of that which is loft, the tenor is fometimes fuftained without witnesses. In a writing which is libelled to have contained uncommon clauses, all these must appear by the adminicles. Actions of proving the tenor are, on account of their importance, appropriated to the court of fession; and, by the old form, the testimony of the witnesses could not be received but in presence of all the judges.

24. The action of double or multiple pointing may Multiple be also reckoned declaratory. It is competent to a pointing. debtor, who is diffressed, or threatened with diffress, by two or more perfons claiming right to the debt, and who therefore brings the feveral claimants into the field, in order to debate and fettle their feveral preferences, that fo he may pay fecurely to him whose right shall be found preferable. This action is daily purfued by an arreftee, in the case of several arrestments used in his hands for the same debt; or by tenants in the case of several adjudgers, all of whom claim right to the fame rents. In these competitions, any of the competitors may bring an action of multiple poinding in name of the tenants, or other debtors, without their confent, or even though they thould disciaim the procefs: fince the law has introduced it as the proper remedy for getting fuch competitions determined : And while the fubject in controverfy continues in medio, any third person who conceives he has a right to it, may,

Declara-

his titles, as if he were an original party to the fuit, and will be admitted for his interest in the competition, By the foresaid bankrupt statute, however, it is competent, in the case of a forthcoming or multiple poinding raifed on an arrestment used within thirty days prior, or four kalendar months fublequent to a bankruptcy, for any other creditor producing his interest, and making his claim, in the process at any time before the expiration of the four months, to be ranked in the fame manner as if he had used the form of arrestment.

T.

Accessory actions.

Transfe-

rence.

25. Certain actions may be called accessory, because they are merely preparatory or fubfervient to other actions. Thus, exhibitions ad deliberandum, at the inflance of an heir against the creditors or custodiers of his ancestor's writings, are intended only to pave the way for future processes. An action of transference is alfo of this fort, whereby an action, during the pendency of which the defender happens to die, is craved to be transferred against his representative, in the same condition in which it flood formerly. Upon the purfuer's death his heir may infift in the caufe against the defender, upon producing either a retonr or a confirmed testament, according as the subject is heritable or moveable. Transferences being but incidental to other actions, can be pronounced by that inferior judge alone before whom the principal cause depended; but where the representatives of the deceased live in another territory, it is the supreme court must transfer. Obligations may now be registered fummarily after the creditor's death; which before was not admitted, without a feparate process of registration, to which the granter was necessarily to be made a party.

26. A process of wakening is likewife accessory. Wakening. An action is faid to fleep, when it lies over not infifted in for a year, in which case its effect is suspended: but even then it may, at any time within the years of prescription, be revived or wakened by a summons, in which the purfuer recites the last step of the process, and concludes that it may be again carried on as if it had not been discontinued. An action that stands upon any of the inner-house rolls cannot sleep; nor an action in which decree is pronounced, because it has got its full completion : Confequently the decree may be extracted after the year, without the necessity of a wa-

27. An action of transumpt falls under the same class. It is competent to those who have a partial interest in writings that are not in their own custody, against the possessions thereof, for exhibiting them, that they may be transumed for their behoof. Tho' the ordinary title in this process be an obligation by the defender to grant transumpts to the purfuer, it is fufficient if the purfuer can show that he has an interest in the writings; but in this case, he must tranfume them on his own charges. Actions of transumpt may be purfued before any judge-ordinary. After the writings to be transumed are exhibited, full duplicates are made out, collated, and figned, by one of the clerks of court, which are called transumpts, and are as effectual as an extract from the register.

28. Actions proceeded anciently upon brieves iffuing from the chancery, directed to the jufficiary or judge-ordinary, who tried the matter by a jury, upon whose verdict judgment was pronounced : And to this

Vol. IX. Part II.

Law of though he should not be cited as a defender, produce day we retain certain brieves, as of inquest, teree, Law of idiotry, tutory, perambulation, and perhaps two or three others: But fummonfes were, immediately upon the Summonfes, inflitution of the college of justice, introduced in the place of brieves. A fummons, when applied to actions purfued before the fession, is a writ in the king's name. iffuing from his fignet upon the purfuer's complaint, authorifing messengers to cite the defender to appear before the court and make his defences; with certification, if he fail to appear, that decree will be pronounced against him in terms of the certification of the fum-

> 29. The days indulged by law to a defender, between his citation and appearance, to prepare for his defence, are called inducia legales. If he is within the address. kingdom, 21 and 6 days, for the first and second diets of appearance, must be allowed him for that purpole; and if out of it, 60 and 15. Defenders residing in Orkney or Zetland must be cited on 40 days. In certain fummonfes which are privileged, the inducie are shortened: Spuilzies and ejections proceed on 15 days; wakenings and transferences, being but incidental, on fix ; (fee the lift of privileged fummonles, in act of federunt Jane 29th 1672.) A fummons muft be executed, i. e. ferved against the defender, so as the last diet of appearance may be within a year after the date of the fummons; and it must be called within a year after that diet, otherwise it falls for ever. Offence against the authority of the court, acts of malversation in office by any member of the college of juflice, and acts of violence and oppression committed during the dependence of a fuit by any of the parties, may be tried without a fummons, by a fummary com-

30. Though the Romans acknowledged a concourfe Concourfe of actions in their proceedings, it is not known in the of actions. law of Scotland. Therefore, where an action is in part penal, e.g. a removing, spuilzie, &c. a pursuer who reflicts his demand to, and obtains a decree merely for, rettitution, cannot thereafter bring a new process for the violent profits. Yet the same fact may be the foundation both of a criminal and civil action, because these two are intended for different purposes; the one for fatisfying the public justice, the other for indemnifying the private party: And though the defender flould be absolved in the criminal trial, for want of evidence, the party injured may bring an action ad civilem effectum, in which he is intitled to refer the libel to the defender's oath.

31. One libel or fummons may contain different con- Accumulaclusions on the fame ground of right, rescissory, de-tion of acclaratory, petitory, &c. if they be not repugnant to tions. each other : Nay, though different fums be due to one, upon diffinct grounds of debt, or even by different debtors, the creditor may infift against them all in the fame fummons,

32. Defences are pleas offered by a defender for Defences. eliding an action. They are either dilatory, which do not enter into the cause itself, and so can only procure an absolvitor from the lis pendens: Or peremptory, which entirely cut off the purfuer's right of action. The first, because they relate to the forms of proceeding, must be offered in limine judicii, and all of them at once. But peremptory defences may be proponed at any time before fentence. By a late act of federunt,

Law of however (1787), all defences, both dilatory and peremptory, fo far as they are known, must be proposed at returning the fummons, under a penalty; and the fame enactment extends to the cases of suspensions and advocations. The writings to be founded upon by the parties also must be produced; the intention of the court, in framing the act of federunt, being to accelerate as much as possible the decision of causes.

Litifconteftation.

33. A cause, after the parties had litigated it before the judge, was faid by the Romans to be litifcontested, By litifcontestation a judicial contract is understood to be entered into by the litigants, by which the action is perpetuated against heirs, even when it arises ex dolido. By our law, litifcontestation is not formed till an act is extracted, admitting the libel or defences to proof.

claxxiv.

SECT. II. Of Probation. ALL allegations by parties to a fuit, must be supported by proper proof. Probation is either by wri-

Probation.

ting, by the party's own oath, or by witnesses. In the case of allegations, which may be proved by either of prout de ju- the three ways, a proof is faid to be admitted prout de jure : because, in such case, all the legal methods of probation are competent to the party; if the proof he brings by writing be lame, he may have recourse either to witnesses or to his adversary's oath; but, if he should first take himself to the proof by oath, he cannot thereafter use any other probation (for the reason assigned par. 3.); and, on the contrary, a purfuer who has brought a proof by witnesses, on an extracted act, is not allowed to recur to the oath of the defender. Single combat, as a fort of appeal to Providence, was, by our ancient law, admitted as evidence, in matters both civil and criminal. It was afterwards reftricted to the case of fuch capital crimes where no other proof could be had; fome traces of this blind method of trial remained even in the reign of James VI. who, by 1600, c. 12. might

by fingle combat :

authorife duels on weighty occasions. 2. As obligations or deeds figured by the party himby writing. 2. As obligations of authors, must be, of all evidence, felf, or his ancestors or authors, must be, of all evidence, the least liable to exception; therefore every debt or allegation may be proved by proper evidence in writing. The folemnitie's effential to probative deeds have been already explained, (no clxxiv. 3 et feq) Books of account kept by merchants, tradefmen, and other dealers in bufiness, though not subscribed, are probative against him who keeps them; and, in case of furnishings by a shop keeper, such books, if they are regularly kept by him, supported by the testimony of a single witness, afford a semiplena probatio in his favour, which becomes full evidence by his own oath in supplement. Notorial instruments and executions by messengers bear full evidence, that the folemnities therein fet forth were used, not to be invalidated otherwise than by a proof of falsehood; but they do not prove any other extrinfic facts therein averred, against third parties.

Probation ference.

3. Regularly, no perfon's right can be proved by oath of par- his own oath, nor taken away by that of his adverfary; because these are the bare averments of parties in their own favour. But, where the matter in iffue is referred by one of the parties to the oath of the other, fuch oath, though made in favour of the deponent himfelf, is decifive of the point; because the reference is a vir-

tual contract between the litigants, by which they are understood to put the iffue of the cause upon what shall Scotland. be deposed : and this contract is so strictly regarded. that the party who refers to the oath of the other cannot afterwards, in a civil action, plead upon any deed against the party deposing, inconsistent with his oath, To obviate the fnares that may be laid for perjury, he, to whose oath of verity a point is referred, may refuse to depofe, till his adverfary swear that he can bring no other evidence in proof of his allegation.

4. A defender, though he cannot be compelled to fwear to facts in a libel properly criminal; yet may, in trespasses, where the conclusion is limited to a fine, or to damages. In general, an oath of party cannot either hurt or benefit third parties; being, as to them,

res inter alios acta.

5. An oath upon reference is fometimes qualified by O alfied ·fpecial limitations reftricting it. The qualities which oathsare admitted by the judge as part of the oath, are called intrinsic; those which the judge rejects or separates from the oath, extrinsic. Where the quality makes a part of the allegation which is revelantly referred to oath, it is intrinsic. Thus, because a merchant, fuing for furnishings after the three years, must, in order to make a relevancy, offer to prove by the defender's oath. not only the delivery of the goods, but that the price is still due; therefore, though the defender should acknowledge upon oath his having received the goods, yet, if he adds, that he paid the price, this last part being a denial that the debt fublifts, is intrinsic, fince it is truly the point referred to oath. Where the quality does not import an extinction of the debt, but barely a counter-claim, or mutua petitio, against the purfuer, it is held as extrinfic, and must be proved aliunde. Neither can a defender who in his oath admits the conflitution of a debt; get off by adjecting the quality of payment, where the payment ought by its nature to be vouched by written evidence.

6. Oaths of verity are fometimes referred by the Oaths in judge to either party, ex officio; which, because they supplement are not founded on any implied contract between the litigants, are not finally decifive, but may be traverfed on proper evidence afterwards produced. These oaths are commonly put by the judge for supplying a lame or imperfect proof, and are therefore called outls in

Supplement. (See par. 2.)

7. To prevent groundless allegations, oaths of ca-Oath of lumny have been introduced, by which either party may calumny. demand his a verfary's oath, that he believes the fact contained in his libel or defences to be just and true. As this is an oath, not of verity, but only of opinion, the party who puts it to his adverfary does not renounce other probation; and therefore no party is bound to give an oath of calumny, on recent facts of his own, for such oath is really an oath of verity. These oaths have not been fo frequent fince the act of federunt, Feb. 1. 1715, whereby any party, against whom a fact shall be alleged, is obliged, without making oath, to confess or deny it; and, in case of calumnious denial, is subjected to the expence that the other party has thereby incurred.

8. In all oaths, whether of verity or calumny, the citation carries, or at least implies, a certification, that if the party does not appear at the day affigned for depoling, he shall be held pro confesso; from a presump-

Law of tion of his confcionineis, that the fact upon which he Scotland, declines to fwear makes against him; but no party can be held pro confesso, if he be in the kingdom, without a previous personal citation used against him. Though an eath which refolves into a non memini, cannot be A non mefaid to prove any point; yet where one fo depofes upmini oath. on a recent fact, to which he himfelf was privy, his oath is confidered as a diffembling of the truth, and he

Oath in li-

is held pro confesso, as if he had refused to swear. q. An oath in litem, is that which the judge refers to a purfuer, for afcertaining either the quantity or the value of goods which have been taken from him by the defender without order of law, or the extent of his damages. An oath in litem, as it is the affirmation of a party in his own behalf, is only allowed where there is proof that the other party has been engaged in some illegal act, or where the public policy has made it neceffary, (fee no claxiii. 11.) This oath, as to the quantities, is not admitted, where there is a concurring teflimony of witnesses brought in proof of it. When it it put as to the value of goods, it is only an oath of credulity; and therefore it has always been subject to the modification of the court.

Probation by wit. offes, in what cafes

10. The law of Scotland rejects the testimony of witnesses, (1.) In payment of any fum above L. 100 Scots, all which must be proved either feripto vel juramento. (2.) In all gratuitous promifes, though for the fmallest trifle. (3.) In all contracts, where writing is either effential to their conflitution, (fee no claxiv. 2.) or where it is usually adhibited, as in the borrowredrictions mentioned in the next par, that no debt or right, once conflituted by writing, can be taken away by witnesses.

in what admitted.

11. On the other part, probation by witnesses is admitted to the extent of L. 100 Scots, in payments, nuncupative legacies, and verbal agreements which contain mutual obligations. And it is received to the highest extent, (1.) In all bargains which have known moveable goods, (2.) In facts performed in fatisfaction, even of a written obligation, where such obligation binds the party precifely to the performance of them. (3.) In facts which with difficulty admit of a proof by writing, even though the effect of fuch proof fould be the extinction of a written obligation, especially if the facts import fraud or violence; thus, a bond is redncible ex doto, on a proof by winnesses. Lastly, all intromission by a creditor with the rents of his debtor's eftate payable in grain, may be proved by witneffes; and even intromiffion with the filver rent, where the creditor has entered into the total possession of the debtor's lands.

12. No person, whose near relation to another bars him from being a judge in his cause, can be admitted bted as win- as a witness for him; but he may against him, except a wife or child, who cannot be compelled to give testimony against the husband or parent, ob reverentiam persone, et metum perjurii. Though the witness, whose propinquity to one of the parties is objected to, be as nearly related to the other, the objection flands good.

13. The testimony of infamous persons is rejected, i.e. persons who have been guilty of crimes that law declares to infer infamy, or who have been declared infamous by the fentence of a judge; but infamia facti

does not disqualify a witness. Pupils are inhabite wit- Law of neffes; being, in the judgment of law, incapable of the So tland impressions of an oath. And in general witnesses o. therwise exceptionable may, where there is a penury of witnesses ariling from the nature or circumitances of the fact, be received cum nota; that is, their testimony, though not quite free from fuspicion, is to be conjoined with the other evidence, and to have fuch weight given it as the judge shall think it deferves.

14. All witnesses, before they are examined in the Purgation cause, are purged of partial counsel; that is, they must of witnesdeclare, that they have no interest in the fuit, nor have fer given advice how to conduct it; that they have got neither bribe nor promife, nor have been influcted how to depose; and that they bear no enmity to either of the parties. Thefe, because they are the points put to a witness before his making oath, are called initialia testimonii. Where a party can bring present proof of a witness's partial counsel, in any of the above particulars, he ought to offer it before the witness be sworn : but, because such objection, if it cannot be instantly verified, will be no bar to the examination, law allows the party in that case to protest for reprobator, before the witness is examined; i. e. that he may be afterwards allowed to bring evidence of his enmity, or other inability. Reprobator is competent even after fentence, where protestation is duly entered; but in that cafe, the party infifting must confign L. 100 Scats, which he forfeits if he fuccumb. This action must have the concurrence of the king's advocate, because the conclusion of it imports perjury; and for this rea-

15. The interlocutory fentence or warrant, by which Diffeence parties are authorised to bring their proof, is either by against witway of act, or of incident diligence. In an act, the neffes. lord ordinary who pronounces it is no longer judge in the process; but in an incident diligence, which is commonly granted upon special points, that do not exhauft the caufe, the lord ordinary continues judge. If a witness does not appear at the day fixed by the warrant of citation, a fecond warrant is granted of the nature of a caption, containing a command to meffengers to apprehend and bring him before the court. Where the party to whom a proof is granted, brings none within the term allowed by the warrant, an interlocutor is pronounced, circumducing the term, and pg .- Circumcluding him from bringing evidence thereafter. Where duction. evidence is brought, if it be upon an act, the lord ordinary on the acts, after the term for proving is clapfed, declares the proof concluded; and thereupon a ftate of the case is prepared by the ordinary on concluded causes, which must be judged by the whole lords: but if the proof be taken upon an incident diligence, the import of it may be determined by the lord ordinary in the cause.

16 Where facts do not admit a direct proof, pre- Prefumpfumptions are received as evidence which in many cases, tions. make as convincing a proof as the direct. Prefumptions are confequences deduced from facts known or proved, which inter the certainty, or at least a strong probability, of another fact to be proved. This kind of probation is therefore called artificial, because it requires a reasoning to infer the truth of the point in queltion, from the facts that already appear in proof. Prefumptions are either, 1. juris et de jure; 2. juris; or, 3. ba-

Law of

minis or judicis. The first fort obtains, where statute or custom establishes the truth of any point upon a prefumption; and it is fo ftrong, that it rejects all proof that may be brought to elide it in special cases. Thus, the testimony of a witness, who forwardly offers himfelf without being cited, is, from a presumption of his partiality, rejected, let his character be ever so fair; and thus also, a minor, because he is by law presumed incapable of conducting his own affairs, is upon that prefumption disabled from acting without the confent of his curators, though he should be known to behave with the greatest prudence. Many such presumptions are fixed by statute.

17. Prasumptiones juris are those which our lawbooks or decisions have established, without founding any particular confequence upon them, or statuting fuper prasumpto. Most of this kind are not proper prefumptions inferred from positive facts, but are founded merely on the want of a contrary proof; thus, the legal presumptions for freedom, for life, for innocence, &c. are in effect fo many negative propositions, that fervitude, death, and guilt, are not to be prefumed, without evidence brought by him who makes the allegation. All of them, whether they be of this fort, or proper prefumptions, as they are only conjectures formed from what commonly happens, may be elided, not only by direct evidence, but by other conjectures, affording a stronger degree of probability to the contrary. Pra-Sumptiones hominis or judicis, are those which arise daily from the circumstances of particular cases; the strength of which is to be weighed by the judge.

18. A fictio juris differs from a prefumption. Things are prefumed, which are likely to be true; but a fiction of law assumes for truth what is either certainly false, or at least is as probably salse as true. Thus an heir is feigned or confidered in law as the fame person with his ancestor. Fictions of law must, in their effects, be always limited to the special purposes of equity for which they were introduced; fee an example,

Nº clxxxiii. 3.

clude all review or rehearing.

SECT. III. Of Sentences and their Executions.

PROPERTY would be most uncertain, if debateable points might, after receiving a definitive judgement, be brought again in question, at the pleasure of either of the parties: every flate has therefore fixed the character of final to certain fentences or decrees, which in the Roman law are called res judicate, and which ex-

Res judicata.

clxxxv.

Decrees in forg.

2. Decrees of the court of fession, are either in foro contradictorio, where both parties have litigated the cause, or in absence of the desender. Decrees of the fession in foro cannot, in the general case, be again brought under the review of the court, either on points which the parties noglected to plead before fentence (which we call competent and omitted), or upon points pleaded and found infufficient (proponed and repelled.) But decrees, though in foro, are reverfible by the court, where either they labour under effential nulliwhom the decree is obtained has thereafter recovered ever, before being heard in the inferior court, reimbur-

evidence sufficient to overturn it, of which he knew Law of not before. Scotland.

3. As parties might formerly reclaim against the Two confe-fentences of the fession, at any time before extracting cutive inthe decree, no judgment was final till extract; but reclocutors now, a sentence of the inner-house, either not re- are final. claimed against within fix sederunt days after its date, or adhered to upon a reclaiming bill, though it cannot receive execution till extract, makes the judgment final as to the court of fession. And, by an order of the houfe of lords, March 24. 1725, no appeal is to be received by them from fentences of the fession, after Timelimifive years from extracting the featence; unless the per-ted for apfon intitled to fuch appeal be minor, clothed with a peals. husband, non compos mentis, imprisoned, or out of the kingdom. Sentences pronounced by the lord ordinary have the same effect, if not reclaimed against, as if they were pronounced in presence; and all petitions against the interlocutor of an ordinary must be preferred within eight federunt days after figning fuch interlocutor.

4. Decrees, in absence of the defender, have not Decrees in the force of res judicate as to him; for where the de-absence. fender does not appear, he cannot be faid to have fubjected himself by the judicial contract which is implied in litifcontestation; a party therefore may be restored against these, upon paying to the other his costs in recovering them. The fentences of inferior courts may be reviewed by the court of fession,-before decree, by advocation, -and after decree, by fuspension or reduction; which two last are also the methods of calling in question such decrees of the fession itself, as can again

be brought under the review of the court. 5. Reduction is the proper remedy, either where Decrees ret

the decree has already received full execution by pay- viewed ciment, or where it decrees nothing to be paid or per the by re-formed, but fimply declares a right in favour of the duction or purfuer. Sufpension is that form of law by which the furpensions effect of a fentence condemnatory, that has not yet received execution, is stayed or postponed till the cause be again considered. The first step towards suspension is a bill preferred to the lord ordinary on the bills. This bill, when the defire of it is granted, is a warrant for iffuing letters of suspension which pass the fignet; but if the presenter of the bill shall not, within 14 days after paffing it, expedite the letters, execution may by act of federunt 1677 proceed on the fentence. In practice, however, it is usual for the charger to put up a protestation in the minute book for production of the fuspension, which may be expedited at any time before this is done; and if the fuspender shall allow the protestation to be extracted, the fift falls. Sufpenfions of decrees in foro cannot pass, but by the whole lords in time of fession, and by three in vacation time; but other decrees may be suspended by any one of the judges. By the late act of federunt (1787), in order to remedy the abuse of prefenting a multiplicity of bills of fuspension of the decrees of inferior judges in small causes which have passed in absence, it is deelared, that all bills of fuspension of decreets by infeties; e. g. where they are ultra petita, or not con-rior judges in absence of the defenders in causes under formable to their grounds and warrants, or founded 12 l. Sterling value, shall be refused and remitted to on an error in calcul, &c.; or where the party against the inferior judge if competent; the suspender, howScotland.

vious to the remit. nuft give Caution.

6. As suspension has the effect of staving the execution of the creditor's legal diligence, it cannot, in the general case, pass without caution given by the suspender to pay the debt, in the event it shall be found due. Where the suspender cannot, from his low or suspected circumftances, procure unquestionable security, the lords admit juratory caution, i. e. fuch as the fuspender fwears is the best he can offer; but the reasons of fuspension are, in that case, to be considered with particular accuracy at paffing the bill. Decrees in favour of the clergy, of univerlities, hospitals, or parish-schoolmasters, for their stipends, rents, or salaries, cannot be suspended, but upon production of discharges, or on confignation of the fums charged for. A charger, who thinks himfelf fecure without a cautioner, and wants dispatch, may, where a suspension of his diligence is fought, apply to the court to get the reasons of suspension summarily discussed on the

petent.

7. Though he, in whose favour the decree suspend-Sufpension, 7. I hough he, in whole favour the decree suspend-when com-ed is pronounced, be always called the charger, yet a decree may be suspended before a charge be given on it. Nay, suspension is competent even where there is no decree, for putting a stop to any illegal act whatfoever: thus, a building, or the exercise of a power which one affumes unwarrantably, is a proper fubject of fuspension. Letters of suspension are considered merely as a prohibitory diligence; fo that the suspender, if he would turn provoker, must bring an action of reduction. If, upon discussing the letters of suspenfion, the reasons shall be sustained, a decree is pronounced, suspending the letters of diligence on which the charge was given fimpliciter; which is called a decree of fuspension, and takes off the effect of the decree fuspended. If the reasons of suspension be repelled, the court find the letters of diligence orderly proceeded, i. e. regularly carried on; and they ordain them to be put to faither execution.

Extraction

8. Decrees are carried into execution, by diligence, of decrees. either against the person or against the estate of the debtor. The first step of personal execution is by letters of horning, which pass by warrant of the court of fession, on the decrees of magistrates of boroughs, fheriffs, admirals, and commissaries. If the debtor does not obey the will of the letters of horning within the days of the charge, the charger, after denouncing him rebel, and registering the horning, may apply for letters of caption, which contain a command, not only to messengers, but to magistrates, to apprehend and imprison the debtor. All messengers and magistrates, who refuse their affiltance in executing the caption, are liable fubfidiarie for the debt; and fuch fubfidiary action is supported by the execution of the messenger employed by the creditor, expressing that they were charged to concur, and would not. Letters of caption contain an express warrant to the messenger, in case he cannot get accefs, to break open all doors and other lock fast places.

What perfons fecured against

9. Law fecures peers, married women, and pupils, against personal execution by caption upon civil debts. Such commoners also as are elected to serve in parliament, are fecured against personal execution by the privilege of parliament. No caption can be executed

Law of fing the charger of the expences incurred by him pre- against a debtor within the precincts of the king's palace of Holyroodhouse: but this privilege of fanctuary afforded no fecurity to criminals, as that did which was, by the canon law, conferred on churches and religious houses. Where the personal presence of a debtor, under caption, is necessary in any of our supreme courts, the judges are empowered to grant him a protection, for fuch time as may be fufficient for his coming and going, not exceeding a month. Protection from diligence is also granted by the court of festion under the late bankrupt flatute, where it is applied for, with concurrence of the truftee, or a certain number of the creditors as the cafe may require.

10. After a debtor is imprisoned, he ought not to Prisoners be indulged the benefit of the air, not even under a must be guard; for creditors have an interest, that their debtors fined.

be kept under close confinement, that, by the fqualor carceris, they may be brought to pay their debt: and any magistrate or jailor, who shall suffer the prisoner to go abroad, without a proper atteftation, upon oath, of the dangerous state of his health, is liable fubfidiarie for the debt. Magistrates are in like manner liable, if they shall suffer a prisoner to escape through the infufficiency of their prison: but, if he shall escape under night, by the use of instruments, or by open force, or by any other accident which cannot be imputed to the magistrates or jailor, they are not chargeable with the debt; provided they shall have, immediately after his escape, made all possible search for him. A case lately occurred where a meffenger having apprehended a person for a debt, upon letters of caption, delivered him over to the provoit of the burgh, and took a receipt for him. The provoft allowed him to remain at the inn all night, and afterwards allowed him what is called open gaol, by which he had access to the courthouse, under the same roof with the prison, where he transacted business. As the person at whose instance he was apprehended upon the caption, confidered that the magistrates had not kept the debtor in prison as commanded by the letters, brought an action against them for the debt, although the debtor had not fo much as attempted to make his esoape. It was contended by the magistrates, that they were not liable, having only followed the usual practice of the burgh : but the court of fession, considering the magistrates as principal keepers of the prison, and as such having no difcretionary power, were of opinion, that the debtor had never been imprisoned in the eye of law, and therefore found the magistrates liable; and their judgment was affirmed upon appeal. Regularly, no prisoner for Form of Itdebt upon letters of caption, though he should have made payment, could be released without letters of sufpension, containing a charge to the jailor to set him at liberty; because the creditor's discharge could not take off the penalty incurred by the debtor for contempt of the king's authority : but to fave unnecessary expence to debtors in fmall debts, jailors are empowered

11. Our law, from a confideration of compassion, Liberation allows infolvent debtors to apply for a release from pri- upon a coffon upon a ceffio bonorum, i. e. upon their making over fis bonorum; to the creditors all their estate real and perional. This must be infasted for by way of action, to which all the

to let go prisoners where the debt does not exceed 200

merks Scots, upon production of a discharge, in which

the creditor confents to his releafe.

Law of Scotland.

creditors of the prifoner ought to be made parties. The prisoner must, in this action, which is cognisable only by the court of fession, exhibit a particular inventory of his estate, and make oath that he has no other effate than is therein contained, and that he has made no conveyance of any part of it, fince his imprisonment, to the hurt of his creditors. He must also make oath, whether he has granted any disposition of his effects before his imprisonment, and condescend on the perfons to whom, and on the cause of granting it; that the court may judge, whether, by any collusive practice, he has forfeited his claim to liberty.

12. A fraudulent bankrupt is not allowed this pri-

not competent to delinquents.

vilege: nor a criminal who is liable in any affythment or indemnification to the party injured or his executors, though the crime itself should be extinguished by a pardon. A disposition granted on a ceffia bonorum is merely in farther fecurity to the creditors, not in fatisfaction or in folutum of the debts. If, therefore, the debtor shall acquire any estate after his release, such estate may be attached by his creditors, as if there had been no cessio, except in fo far as is necessary for his fubfittence. Debtors, who are fet free on a cellio bonorum, are obliged to wear a habit proper to dyvours or bankrupts. The lords are prohibited to difpense with this mark of ignominy, unless, in the summons and process of cellio, it be libelled, sustained, and proved, that the bankruptcy proceeds from misfortune. And bankrupts are condemned to submit to the habit, even where no fuspicion of fraud lies against them, if they have been dealers in an illicit trade.

Byvour's habit.

13. Where a prisoner for debt declares upon oath, before the magistrate of the jurisdiction, that he has not wherewith to maintain himself, the magistrate may fet him at liberty, if the creditor, in confequence of Aliment. whose diligence he was imprisoned, does not aliment him within ten days after intimation made for that purpose. But the magistrate may, in such case, detain him in prifon, if the creditor chuses to bear the burden of the aliment rather than release him. The statute authorifing this releafe, which is usually called the all of grace, is limited to the case of prisoners for civil debts.

Act of grace.

14. Decrees are executed against the moveable estate against the of the debtor by arrestment or poinding; and against his heritable effate, by inhibition, or adjudication. If one be condemned, in a removing or other process, to quit the poffession of lands, and refuses, notwithstanding a charge, letters of ejection are granted of courfe, ordaining the theriff to eject him, and to enter the obtainer of the decree into possession. Where one opposes by violence the execution of a decree, or of any lawful diligence, which the civil magistrate is not able by himfelt and his officers to make good, the execution is enforced manu militari.

15. A decree arbitral, which is a fentence proceeding on a fubmiffion to arbiters, has some affinity with a judicial ientence, though in most respects the two dif-Submiffi n. fer. A fubmiffion is a contract entered into by two or more parties who have difputable rights or claims, where by they refer their differences to the final determination of an arbiter or arbiters, and oblige themfelves to acquiesce in what shall be decided. Where the day within which the arbiters are to decide, is left blank in the fubmission, practice has limited the arbiters power of deciding to a year. As this has proceed-

ed from the ordinary words of ftyle, empowering the Law of arbiters to determine betwixt and the day of

next to come; therefore, where a fubmission is indefinite, without specifying any time, like all other. contracts or obligations, it subfilts for 40 years. Submissions, like mandates, expire by the death of any of the parties submitters before sentence. As arbiters are not vested with jurisdiction, they cannot compel witneffes to make gath before them, or havers of writings to exhibit them; but this defect is fupplied by the court of fession, who, at the fuit of the arbiters, or of either of the parties, will grant warrant for citing witnesses, or for the exhibition of writings. For the same reason, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the fubmitters confent to the registration of the decree-arbitral, performance may be enforced by fummary diligence.

16. The power of arbiters is wholly derived from Powers of the confent of parties. Hence where their powers are arbiters, limited to a certain day, they cannot pronounce fentence after that day. Nor can they subject parcies to a penalty higher than that which they have agreed to in fpecial claims, fentence pronounced on subjects not specified in the fubmission is null, as being ultra vires com-

17. But, on the other hand, as fubmiffions are de- Decrees arfigned for a most favourable purpose, the amicable com- bitral, how poling of differences, the powers thereby conferred on far reduarbiters receive an ample interpretation. Decrees-arbitral are not reducible upon any ground, except corruption, bribery, or falfehood.

SECT. IV. Of Crimes.

claxavi.

THE word crime, in its most general fense, includes Crimes, every breach either of the law of God or of our country; in a more restricted meaning, it fignishes such transgreifions of law as are punishable by courts of juflice. Crimes were, by the Roman law, divided into public and private. Public crimes were those that were expressly declared such by some law or constitution, public, and and which, on account of their more atrocious nature and hurtful consequences, might be protecuted by any member of the community. Private crimes could be private. purfued only by the party injured, and were generally punished by a pecuniary fine to be applied to his use. By the law of Scotland, no private party, except the person injured, or his next or kin, can accuse criminally : but the king's advocate, who in this queltion reprefents the community, has a right to profecute all crimes in windictam publicam, though the party injured should refuse to concur. Smaller offences, as petty riots, injuries, &c. which do not demand the public vengeance, pass generally by the appellation of delicts, and are punished either by fine or imprisonment.

2. The effence of a crime is, that there be an inten- What eftion in the actor to commit; for an action in which fential to the will of the agent has no part, is not a proper ob-crimes. ject either of rewards or punishments : hence arises the rule crimen dolo contrabitur. Simple negligence does not therefore contitute a proper crime. Yet where it is extremely gross, it may be punished arbitrarily. Far less can we reckon in the number of crimes, those com-

mitted

of fatuity, which only darken reason, will not afford a total defence, though they may fave from the pana ordinaria. Actions committed in drunkenness are not to be confidered as involuntary, feeing the drunkenness itself, which was the first cause of the action, is both

voluntary and criminal.

3. On the same principle, such as are in a state of infancy, or in the confines of it, are incapable of a criminal action, dole not being incident to that age : but the precise age at which a person becomes capable of dole, being fixed neither by nature nor by flatute, is by our practice to be gathered by the judge, as he beilt can, from the underflanding and manners of the perfon accufed. Where the guilt of a crime arifes chiefly from flatute, the actor, if he is under puberty, can hardly be found guilty; but, where nature itfelf points out its deformity, he may, if he is proximus pule mi, be more easily prefumed capable of committing it: yet, even in that case, he will not be punished pana ordina-

4. One may be guilty of a crime, not only by perpetrating it himself, but being accessory to a crime committed by another; which last is by civilians styled ope et confilio, and, in our law-phrafe, art and part. A person may be guilty, art and part, either by giving advice or counsel to commit the crime; or, 2. By giving warrant or mandate to commit it; or, 3. By actually affifting the criminal in the execution. It is generally agreed by doctors, that, in the more atrocious crimes, the advifer is equally punishable with the criminal; and that, in the flighter, the circumstances arifing from the advifer's leffer age, the jocular or carelefs manner of giving advice, &c. may be received as pleas to commit a crime, as he is the first spring of action, feems more guilty than the person employed as the inflrument in executing it; yet the actor cannot excufe himself under the pretence of orders which he ought not to have obeyed.

5. Affiftance may be given to the committer of a crime, not only in the actual execution, but previous to it, by furnishing him, intentionally, with poifon, arms, or the other means of perpetrating it. That fort of affiftance which is not given till after the criminal act, and which is commonly called abetting, though it be of itself criminal, does not infer art and part of the principal crime; as if one should favour the escape of a criminal knowing him to be fuch, or conceal him

6. Those crimes that are in their consequences most hurtful to fociety, are punified capitally, in by death; others escape with a leffer punishment, fornetimes fixed by flatute, and fometimes arbitrary, i.e. left to the diferetion of the judge, who may exercise his jurisdiction, either by fine, imprisonment, or a corporal puniffment. Where the punishment is left, by law, to the differetion of the judge, he can in no cafe extend it to death. The fingle escheat of the criminal falls on conviction, in all capital trials, though the featuree should not express it.

lafphen v.

7. Certain crimes are committed more immediately against God himself; others, and of the state; and a third kind, against particular parties. The chief come in the first class, cognisable by temporal courts, is blaf-

Law of mitted by an idiot or furious person: but lesser degrees phemy, under which may be included atheism. This Law of crime confifts in the denying or vilifying the Deity, by fpeech or writing. All who curfe God or any of the persons of the bleffed Trinity, are to suffer death, even for a fingle act; and those who deny him, if they perfift in their denial. The denial of a Providence, or of the authority of the holy Scriptures, is punishable capitally for the third offence.

8. No profecution can now be carried on for witchcraft or conjuration. But all who undertake, from their skill in any occult science, to tell fortunes, or difcover flolen goods, are to fuffer impriforment for a year, fland in the pillory four times in that year, and find

furety for their future good behaviour.

9. Some crimes against the state are levelled directly Treafortsagainst the supreme power, and strike at the constitution itself : others discover such a contempt of law, as tends to baffle authority, or flacken the reins of government. Treason, crimen majestatis, is that crime which is aimed against the majesty of the state; and can be committed only by those who are subjects of that flate either by birth or refidence. Soon after the union of the two kingdoms in 1707, the laws of treafon, then in force in England, were made ours by 7 Ann. c .. 21. both with regard to the facts conflituting that crime, to the forms of trial, the corruption of blood, and all the penalties and forfeitures confequent

10. It is high treason, by the law of England, to imagine the death of the King, Queen-confort, or of the heir apparent of the crown : to levy war against the King, or adhere to his enemies; to counterfeit the king's coin, or his great or privy feal; to kill the chancellor, treasurer, or any of the 12 judges of England, while they are doing their offices: which last article is by the forenamed act 7 Ann. applied to Scotland, in the case of slaying any judge of the fession or of justiciary fitting in judgment. Those who wash, clip, or lighten, the proper money of the realm; who advifedly affirm by writing or printing, that the Pretender has any right to the crown, that the king and parliament cannot limit the fuccession to it, or who hold correfpondence with the Pretender, or any person employed by him, are also guilty of treason.

11. The forms of proceeding in the trial of treason, Pains of whether against peers or commoners, are fet forth in a treason. fmall treatife, published by order of the house of lords in 1709, fubjoined to a collection of flatutes concerning treason. By the conviction upon this trial, the whole effate of the traitor forfeits to the crown. His blood is also corrupted, so that, on the death of an anceftor, he cannot inherit; and the effate which he cannot take, falls to the immediate fuperior as efcheat, ab defection heredis, without diftinguishing whether the lands hold of the crown, or of a fubject. No attainder for treafon shall, after the death of the Pretender and all his fons, hurt the right of any person, other than that of the offender, during his natural life; the rights of creditors and other third parties, in the cafe of forfeiture on treason; must be determined by the law of

12. Misprisson of weason, from meprendre, is the o-Misprisson verlooking or concealing of treason. It is inferred by of treason. one's bare knowledge of the crime, and not discovering it to a magnificate or other perfon intitled by his

rimes.

makes the English law of misprision ours. Its punishment is, by the law of England, perpetual imprisonment, together with the forfeiture of the offender's moveables. and of the profits of his heritable effate, during his c. 48. life : that is, in the ftyle of our law, his fingle and life-

Sedition.

rent escheat. 13. The crime of fedition confifts in the raifing commotions or disturbances in the state. It is either verbal or real. Verbal fedition, or leafing making, is inferred from the uttering of words tending to create difcord between the king and his people. It is punished either by imprisonment, fine, or banishment, at the discretion of the judge. Real fedition is generally committed by convocating together any confiderable number of people, without lawful authority, under the pretence of redreffing fome public grievance, to the disturbing of the public peace. Those who are convicted of this crime are punished by the confication of their goods; and their lives are at the king's will. If any perfons, to the number of 12, shall affemble, and being required by a magistrate or constable to disperse, shall nevertheless continue together for an hour after fuch' command, the persons disobeying shall suffer death and confifcation of moveables.

Corruption in judges.

14. Judges, who, wilfully or through corruption, use their authority as a cover to injustice or oppression, are punished with the loss of honour, fame, and dignity. Under this head may be classed theftbote (from bote, " compensation"), which is the taking a confideration in money or goods from a thief to exempt him from punishment, or connive at his escape from justice. A sheriff or other judge, guilty of this crime, forfeits his life and goods. And even a private person, who takes theftbote, fuffers as the principal thief. The buying of disputed claims, concerning which there is a pending process, by any judge or member either of the fession or of an inferior court, is punished by the loss of the delinquent's office, and all the privileges thereto belonging.

ment.

15. Deforcement is the opposition given, or resistance made, to messengers or other officers, while they are employed in executing the law. The court of fession is competent to this crime. It is punishable with the confication of moveables, the one half to the king, and the other to the creditor at whose fuit the diligence was used. Armed persons, to the number of three or more, affilling in the illegal running, landing, or exporting of prohibited or uncustomed goods, or any who shall resist, wound, or main any officer of the revenue, in the execution of his office, are punishable with death and the confiscation of moveables.

Breach of

arreftment crime of the same nature with deforcement, as it imports a contempt of the law and of our judges. It fubjects to an arbitrary corporal punishment, and the efcheat of moveables; with a preference to the creditor for his debt, and for fuch farther fum as shall be moagainst good government and police, may be reckon-

Law of office to take examinations; though he should not in forbidden time, destroying plough graith in time of Law of Scotland, the least degree affent to it. The forefaid act 7 Ann. tillage, flaying or houghing horfes or cows in time of Scotland. harvest, and destroying or spoiling growing timber : as to the punishment of which, see statutes 1503, c. 72. -1587, c. 82. and 1680, c. 16,-1 Geo. I. St. 2.

17. Crimes against particular persons may be di. Murder, rected either against life, limb, liberty, chastity, goods, or reputation. Murder is the wilful taking away of a person's life, without a necessary cause. Our law makes no diffinction betwixt premeditated and fudden homicide: both are punished capitally. Casual homicide, where the actor is in fome degree blameable; and . homicide in felf-defence, where the just bounds of defence have been exceeded; are punished arbitrarily; but the slaughter of night thieves, house-breakers, affistants in masterful depredations, or rebels denounced for capital crimes, may be committed with impunity. The crime of demembration, or the cutting off of a member, is joined with that of murder; but in practice, its punishment has been reflricted to the escheat of moveables, and an affythment or indemnification to the party. Mutilation, or the difabling of a member, is punished at the discretion of the judge.

18. Self-murder is as highly crimical as the killing Self-murour neighbour; and for this reason, our law has, con- der, trary to the rule, crimina morte extinguuntur, allowed a proof of the crime, after the offender's death, that his fingle escheat might fall to the king or his donatory. To this end, an action must be brought, not before the jufficiary, but the fession, because it is only intended ad civilem effectum, for proving and declaring the felf-murder; and the next of kin to the deceafed mult

be made a party to it.

19, The punishment of parricide, or of the murder Parricide. of a parent, is not confined, by our law, to the criminal himfelf. All his posterity in the right line are declared incapable of inheriting; and the fuccession devolves on the next collateral heir. Even the curfing or beating of a parent infers death, if the person guilty be above 16 years; and an arbitrary punishment, if he be under it. A prefumptive or flatutory murder is condituted by 1690, c. 21. by which any woman who shall conceal her pregnancy, during its whole courfe, and shall not call for, or make use of, help in the birth, is to be reputed the murderer, if the child be dead, or amissing. This act was intended to difcourage the unnatural practice of women making away with their children begotten in fornication, to avoid church-cenfures.

20. Duelling, is the crime of fighting in fingle com- Duelling. bat, on previous challenges given and received. Fighting in a duel, without licence from the king, is punish-16. Breach of arrestment (fee No lxxviii. 5.) is a able by death; and whatever person, principal or fecond, shall give a challenge to fight a duel, or shall accept a challenge, or otherwife engage therein, is punished by banishment and escheat of moveables, though

no actual fighting should enfue.

21. Haimfucken (from baim "home," and focken "to Haimfus dified to him by the judge. Under this head of crimes feek or purfue") is the affaulting or beating of a per-ken. fon in his own house. The punishment of this crime is ed the foreflalling of market; that is, the buying of nowhere defined, except in the books of the Majesty, goods intended for a public market, before they are which make it the same as that of a rape; and it is, carried there; which for the third criminal act infers like rape, capital by our practice. The affault must the escheat of moveables; as also slaying salmon in be made in the proper house of the person assaulted,

Forestalling, &c.

Nº 178.

Battery.

22. Any party to a law-fuit, who shall slay, wound, or otherwise invade his adversary, at any period of time between executing the summons and the complete execution of the decree, or shall be accessory to such invasion, shall lose his cause. The sentence pronounced on this trial, against him who has committed the battery, is not subject to reduction, either on the head of minority, or on any other ground whatever: and if the perion profecuted for this crime shall be denounced for not appearing, his liferent, as well as single escheat, falls upon the denunciation.

Wrongous imprifonment.

23. The crime of aurongous imprisonment is inferred, by granting warrants of commitment in order to trial, proceeding on informations not fubscribed, or without expressing the cause of commitment; by receiving or detaining prisoners on such warrants; by refusing to a prisoner a copy of the warrant of commitment; by detaining him in close confinement, above eight days after his commitment; by not releating him on bail, where the crime is bailable; and by transporting perfons out of the kingdom, without either their own confent, or a lawful fentence. The perfons guilty of a wrongous imprisonment are punished by a pecuniary mulct, from L. 6000 down to L. 400 Scots, according to the rank of the person detained; and the judge, or other person guilty, is over and above subjected to pay to the person detained a certain sum per diem, proportioned to his rank, and is declared incapable of public truft. All these penalties may be insisted for by a fummary action before the fession, and are subject to no modification.

Adultery.

24. Adultery, is the crime by which the marriagebed is polluted. This crime could neither by the Roman nor Jewish law be committed, but where the guilty woman was the wife of another: by ours, it is adultery, if either the man or woman be married. We diffinguish between simple adultery, and that which is notorious or manifelt. Open and manifest adulterers, who continue incorrigible, notwithstanding the cenfures of the church, are punished capitally. crime is diftinguished by one or other of the following characters: where there is iffue procreated between the adulterers; or where they keep bed and company together notoriously; or where they give fcandal to the church, and are, upon their obstinate refusing to listen to its admonitions, excommunicated. The punishment of simple adultery, not being defined by statute, is left to the diferetion of the judge; but cuftom has made the falling of the fingle escheat one of its penalties.

Bigamy.

25. Bigomy, is a person's entering into the engagements of a fecond marriage, in violation of a former marriage-vow ftill substitute. Bigamy, on the part of the man, has been tolerated in many flates, before the establishment of Christianity, even by the Jews themselves; but it is prohibited by the precepts of the gosple, and it is punished by our law, whether on the part of the man or of the woman, with the pains of persons.

Incest.

26. Inseft is committed by persons who stand within the degrees of kindred forbidden in Lev. xviii. and is punished capitally. The same degrees are prohi-

bited in affinity, as in confanguinity, Lev. xviii. 13. Law of set faq. As this crime is repugnant to nature, all childen, whether lawful or natural, fland on an equal footing: civilia ratio civilia jura corrumpere potell, non vero naturalia. It is difficult indeed to bring a legal proof of a relation merely natural, on the fide of the father; but the mother may be certainly known without marriare.

27.4 There is no explicit flatute making rape, or the ravifining of women, capital; but it is plainly fupposed in act 1612. 6.4. by which the ravifier is exempted from the pains of death, only in the case of the woman's subsequent consent, or her declaration that she went off with him of her own free-will; and even then,

he is to fuffer an arbitrary punishment, either by imprisonment, confiscation of goods, or a pecuniary fine.

28. Theft is defined, A fraudulent intermeddling with the property of another, with a view of making gain. Our ancient law proportioned the punishment of the theft to the value of the goods flolen; heightening it gradually, from a flight corporal punishment to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two fleep. In feveral latter 48s, it is taken for granted, that this crime is capital. But where the thing flolen is of finall value, we consider it not as theft but as pickery, which is punished either corporally or by banish-

ment. The breaking of orchards, and the stealing of green wood, is punished by a fine, which rifes as the

crime is repeated.

29. Theft may be aggravated into a capital crime, though the value of the thing flolen be trifling; as theft twice repeated, or committed in the night, or by landed men; or of things fet apart for facred ufes. The receivers and conceaters of flolen goods, knowing Refet of them to be fuch, fuffer as thieves. Those who barely theft harbour the person of the criminal within 48 hours either before or after committing the crime, are punished as partakers of the theft. Such as fell goods belonging to thieves or lawles persons who dare not themselves come to market, are punished with banishment and the escheta of moveables.

30. Theft attended with violence is called robbery; Robbery and in our old statutes, rief or southrief; under which &c. class may be included forning, or the taking of meat and drink by force, without paying for it. Stouthrief came at last to be committed so audaciously, by bands of men affociated together, that it was thought necessary to vest all our freeholders with a power of holding courts upon forners and rievers, and condemning them to death. Nay, all were capitally punished, who, to secure their lands from depredation, payed to the rievers a yearly contribution, which got the name of black-mail. An act also passed, commanding to banishment a band of forners, who were originally from Egypt, called gypfies, and adjudging to death all that should be reputed Egyptians, if found thereafter within the kingdom. Robbery committed on the feas is called piracy, and is punished capitally by the high admiral. Several of the facts which constitute this crime are set forth in a British ftatute, 8 Geo. I. c. 24.

31. Faifchood, in a large fense, is the fraudulent imi- Falschood, tation or suppression of truth, to the damage of another. The lives and goods of persons convicted of using faise weights or measures were, by our old law, in the king's

4 Y

mercy ;

Law of mercy: and their heirs could not inherit but upon a remission. The latest statute against this crime, punishes it by confiscation of moveables. That particular species of falsehood, which consists in the falsifying of Forgery, writings, paffes by the name of forgery. Our practice has now of a long time, agreeably to the Roman law. made this crime capital; unless the forgery be of executions, or other writings of fmaller moment; in which

> cafe, it is punished arbitrarily. 22. The writing must not only be fabricated, but put to use or founded on, in order to infer this crime. And though it be strictly criminal, yet the trial of it is proper to the court of fession; but where improbation is moved against a deed by way of exception, the inferior judge, before whom the action lies, is competent to it ad civilom effectum. When it is pleaded as an exception, our practice, to difcourage affected delays, obliges the defender, who moves it, to confign L. 40 Scots; which he forfeits, if his plea shall appear calumnious.

33 Where a person, found guilty of forgery by the court of fession, is by them remitted to the justiciary, an indictment is there exhibited against him, and a jury fworn, before whom the decree of fession is produced, in place of all other evidence of the crime, in respect of which the jury find the pannel guilty; so that that decree being pronounced by a competent court, is held as full proof, or, in the ftyle of the bar, as probatio probata.

Perjury.

34. Perjury, which is the judicial affirmation of a falsehood on oath, really constitutes the crimen fals; for he who is guilty of it does, in the most solemn manner, fubilitute falf-hood in the place of truth. To constitute this crime, the violation of truth must be deliberately intended by the fwearer; and therefore reasonable allowances ought to be given to forgetfulness or misapprehension, according to his age, health, and other circumstances. The breach of a promissory oath, does not infer this crime; for he who promifes on oath, may fincerely intend performance when he fwears. and so cannot be faid to call on God to attest a falsehood. Though an oath, however false, if made upon reference in a civil question, concludes the cause, the person perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.

35. Notwithstanding the mischievous consequences of perjury to fociety, it is not punished capitally, but by confifcation of moveables, imprisonment for a year, and infamy. The court of fession is competent to perjury incidenter, when, in any examination upon oath. taken in a cause depending before them, a person appears to have fworn falfely; but in the common cafe, that trial is proper to the justiciary. Subornation of perjury confifts in tampering with persons who are to fwear in judgment, by directing them how they are to depose; and it is punished with the pains of per-

Stellionate. 36. The crime of fellionate, from fellio, includes every fraud which is not diftinguished by a special name; but is chiefly applied to conveyances of the fame numerical right, granted by the proprietor to different disponees. The punishment of stellionate must necessarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent acts. The persons guilty of that kind of it, which confilts in Law of granting double conveyances, are by our law declared Scotland. infamous, and their lives and goods at the king's mercy. The cognisance of fraudulent bankruptcy is appropriated to the court of fession, who may inslict any punishment on the offender that appears proportioned to his guilt, death excepted.

37. The crime of usury, before the reformation, confished in the taking of any interest for the use of money; and now in taking an higher rate of interest than is authorifed by law. It is divided into usura manifesta, or direct ; and velata, or covered. One may be guilty of the first kind, either where he covenants with the debtor for more than the lawful interest on the loan-money; or where one receives the interest of a fum before it is due, fince thereby he takes a confideration for the use of money before the debtor has really got the use of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of losing his fum, he may covenant for an higher interest than the legal, without the crime of ufury ; for there, the interest is not given merely in confideration of the use of the money, but of the danger undertaken by the creditor.

38. Covered usury, is that which is committed under the mask not of a loan but of some other contract : e. g. a fale or an improper wadfet. And in general, all obligations entered into with an intention of getting more than the legal interest for the use of money, however they may be disguised, are usurious. As a farther guard against this crime, the taking more than

the legal interest for the forbearance of payment of money, merchandife, or other commodities, by way of loan, exchange, or other contrivance whatever, or the taking a bribe for the loan of money, or for delaying its payment when lent, is declared usury. Where usury is proved, the usurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the fums or goods

lent. Usury, when it is to be pursued criminally, must be tried by the justiciary; but where the libel concludes only for voiding the debt, or restitution, the feffion is the proper court.

39. Injury, in its proper acceptation, is the re- Injury. proaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed against a private person, consists in the uttering contumelious words, which tend to expose our neighbour's character by making him little or ridiculous. It does not feem that the twitting one with natural defects, without any farcastical reflections, though it be inhuman, falls under this description, as these imply no real reproach in the just opinion of mankind. Where the injurious expressions have a tendency to blacken one's moral character, or fix some particular guilt upon him, and are deliberately repeated in different companies, or handed about in whifpers to confidents, it then grows up to the crime of flander: and where a person's moral character is thus attacked, the animus injuriandi is commonly inferred from the injurious words themselves. unless special circumstances be offered to take off the prefumption, ex. gr. that the words were uttered in judgment in one's own defence, or by way of information to a magistrate, and had some foundation in fact. Though the cognizance of flander is proper to the com-

miffaries,

Scotland.

Law of miffaries, who, as the judices Christianitatis, are the only judges of fcandal; yet, for fome time past, bare verbal injuries have been tried by other criminal judges, and even by the fession. It is punished either by a fine, proportioned to the condition of the persons injuring and injured, and the circumstances of time and place : or if the injury import fcandal, by publicly acknowledging the offence; and frequently the two are conjoined. The calling one a bankrupt is not, in ftrict fpeech, a verbal injury, as it does not affect the person's moral character : vet, as it may hurt his credit in the way of bufinefs, it founds him in an action of damages, which must be brought before the judge-ordinary. A real injury is inflicted by any fact by which a perfon's honour or dignity is affected; as firiking one with a cane, or even aiming a blow without flriking : spitting in one's face; assuming a coat of arms, or any other mark of distinction proper to another, &c. The composing and publishing defamatory libels may be reckoned of this kind. Real injuries are tried by the judge-ordinary, and punished either by fine or imprisonment, according to the demerit of the offenders. 40. After having shortly explained the several

crimes punishable by our law, this treatise may be concluded with a few observations on criminal jurifdiction, the forms of triał, and the methods by which crimes may be extinguished. Criminal jurisdiction is founded, 1. Ratione domicilii, if the defender dwells jurifdiction within the territory of the judge. Vagabonds, who have no certain domicile, may be tried wherever they are apprehended. 2. Ratione delicit, if the crime was committed within the territory. Treason is triable, by the English law, in any county that the king should appoint; and, by a temporary act now expired, treason committed in certain Scots counties, was made triable by the court of justiciary, wherever

41. No criminal trial can proceed, unless the person What persons are not accused is capable of making his defence. Absents therefore cannot be tried; nor fatuous nor furious persons, durante furore, even for crimes committted while they were in their fenses. For a like reason, minors who had no curators, could not, by the Roman law, be tried criminally; but our practice confiders every perfon who is capable of dole, to be also sufficiently qualified for making his defence in a criminal

triable.

Commitment-

42. No person can be imprisoned in order to stand trial for any crime, without a warrant in writing expressing the cause, and proceeding upon a subscribed information, unless in the case of indignities done to judges, riots, and the other offences specially mentioned in 1701. c. 6. Every prifoner committed in order to trial, if the crime of which he is accused be not capital, is entitled to be released upon bail, the extent of which is to be modified by the judge, not exceeding 12,000 merks Scots for a nobleman, 6000 for a landed gentleman, 2000 for every other gentleman or burgefs, and 600 for any other inferior person. That persons who, either from the nature of the crime with which they are charged, or from their low circumstances, cannot procure bail, may not lie for ever in prison untried, it is lawful for every fuch priloner to apply to the criminal judge, that his trial may be brought on.

The judge must, within 24 hours after fuch applica- Law of tion, iffue letters directed to meffengers, for intimating Scotland. to the profecutor to fix a diet for the prifoner's trial, within 60 days after the intimation, under the pain of wrongous imprisonment : And if the profecutor does not infift within that time, or if the trial is not finished in forty days more when carried on before the Justiciary, or in thirty when before any other judge; the prisoner is, upon a fecond application, setting forth that the legal time is elapsed, entitled to his freedom, under the fame penalty.

43. Upon one's committing any of the groffer Precognia crimes, it is usual for a justice of the peace, sheriff, or tion. other judge, to take a precognition of the facts, i.e. to examine those who were present at the criminal act. upon the special circumstances attending it, in order to know whether there is ground for a trial, and to ferve as a direction to the profecutor, how to fet forth the facts in the libel; but the persons examined mar infift to have their declarations cancelled before they give testimony at the trial. Justices of the peace. theriffs, and magistrates of boroughs, are also authorifed to receive informations, concerning crimes to be tried in the circuit-courts; which, informations are to be transmitted to the justice-clerk 40 days before the fitting of the respective courts. To discourage groundless criminal trials, all prosecutors, where the defender was absolved, were condemned by statute, in cofts, as they should be modified by the judge, and besides were subjected to a small fine, to be divided between the fife and the defender: And where the king's advocate was the only purfuer, his informer was made liable. This fufficiently warrants the prefent practice of condemning vexatious profecutors in a pecuniary mulct, though far exceeding the statutory fum.

44. The forms of trial upon criminal accusations, Form of differ much from those observed in civil actions, if we trial. except the case of such crimes as the court of session is competent to, and of leffer offences tried before inferior courts. The trial of crimes proceeds either upon indictment, which is fometimes used when the perfon to be tried is in prison; or by criminal letters iffuing from the fignet of the jufticiary. In either case, the defender must be served with a full copy of the indictment or letters, and with a lift of the witnesses to be brought against him, and of the perfons who are to pass on the inquest, and 15 free days must intervene between his being fo ferved and the day of appearance. When the trial proceeds upon criminal letters, the private profecutor must give fecurity, at raising the letters, that he will report them duly executed to the justiciary, in terms of 1535, c, 35.; and the defender, if he be not already in prifon, is, by the letters, required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial: And if he gives none within the days of the charge, he may be denounced rebel, which infers the forfeiture of his moveables.

45. That part of the indictment, or of the criminal letters, which contains the ground of the charge against the defender, and the nature or degree of the punishment he ought to fuffer, is called the libel. All libels must be special, fetting forth the particular facts inferring the guilt, and the particular place where

4 Y 2

thefe

Law of

these facts were done. The time of committing the crime may be libelled in more general terms, with an alternative as to the month, or day of the month : but as it is not practicable, in most cases, to libel upon the precise circumstances of accession that may appear in proof, libels against accessories are sufficient, if they mention, in general, that the perfous profecuted are guilty art and part.

45. The defender in a criminal trial may raife letters of exculpation, for citing witnesses in proof of his defences against the libel, or of his objections against any of the jury or witnesses; which must be executed to the same day of appearance with that of the

indictment or criminal letters. Diets of

47. The diets of appearance, in the court of justiappearance. . 47, are peremptory: the criminal letters must be called on the very day to which the defender is cited; and hence, if no accuser appears, their effect is loft, instantia perit, and new letters must be raised. If the libel, or any of the executions, shall to the profecutor appear informal, or if he be diffident of the proof, from the ablconding of a necessary witness, the court will, upon a motion made by him, defert the diet pro loco et tempore; after which new letters become also neceffary. A defender, who does not appear on the very day to which he is cited, is declared fugitive : in confequence of which, his fingle escheat falls. The defender, after his appearance in court, is called the

48. The two things to be chiefly regarded in a criminal libel, are, 1. The relevancy of the facts, i.e. their fufficiency to infer the conclusion; 2. Their truth. The confideration of the first belongs to the judge of the court; that of the other, to the jury or affize. If the facts libelled be found irrelevant, the pannel is difmiffed from the bar; if relevant, the court remits the proof thereof to be determined by the july; which must consist of 15 men picked out by the court from a greater number not exceeding 45, who have been all fummoned, and given in lift to the defender at ferving

him with a copy of the libel.

Probation of crimes.

49. Crimes cannot, like debts, be referred to the defender's oath; for no person is compellable to swear against himself, where his life, limb, liberty, or estate is concerned, nor even in crimes which infer infamy; because one's good name is, in right estimation, as valuable as his life. There is one exception however to this rule in trying the crime of ufury, which may be proved by the usurer's own oath, notwithstanding the rule, Nemo tenetur jurare in fuam turpitudinem. Crimes therefore are in the general case proveable only by the defender's free confession, or by writing, or by witnesses. No extrajudicial confession, unless it is adhered to by the pannel in judgement, can be admitted

Secii crimiwis.

as evidence. 50. All objections relevant against a witness in civil cases are also relevant in criminal. No witness is admitted, who may gain or lofe by the event of the trial. Socii criminis, or affociates in the fame crime, are not admitted against one another, except either in crimes against the flate, as treason; in occult crimes, where other witnesses cannot be had, as forgery; or in thefts or depredations committed in the Highlands. The testimony of the private party injured may be

is the only profecutor, if from the nature of the crime, Law of there must needs be a penury of witnesses, as in rape, robbery, &c.

51. After all the witnesses have been examined in Verdict of court, the jury are shut up in a room by themselves. where they must continue, excluded from all correspondence, till their verdict or judgment be fubscribed by the foreman (or chancellor) and elerk; and according to this verdict the court pronounces fentence, either absolving or condemning. It is not necessary, by the law of Scotland, that a jury should be unanimous in finding a person guilty; the narrowest majority is as

fufficient against the pannel, as for him. Juries can-

not be punished on account of an erroneous verdict. either for or against the pannel.

52. Though the proper bufiness of a jury be to in Powers of quire into the truth of the facts found relevant by the a jury . court, for which reason they are sometimes called the inquest; yet, in many cases, they judge also in matters of law or relevancy. Thus, though an objection against a witness should be repelled by the court, the jury are under no necessity to give more credit to his testimony than they think just: And in all trials of art and part, where special facts are not libelled, the jury, if they return a general verdict, are indeed judges not only of the truth, but of the relevancy of the facts that are fworn to by the witnesses. A general verdict, is that which finds in general terms, that the pannel is guilty or not guilty, or that the libel or defences are proved or not proved. In a special verdict, the jury finds certain facts proved, the import of which is to be afterwards confidered by the court.

53. Criminal judges must now suspend for some Sentences. time the execution of fucls fentences as affect life or limb, that so condemned criminals, whose cases deserve favour, may have access to apply to the king for mercy. No fentence of any court of judicature, fouth of the river Forth, importing either death or demembration, can be executed in less than 30 days; and, if north of it, in less than 40 days, after the date of the sentence. But corporal punishments, less than death or difmembering, e. g. whipping, pillory, &c. may be inflicted eight days after fentence on this fide Forth,

and twelve days after fentence beyond it.

54. Crimes are extinguished, 1. By the death of Extinction the criminal: both because a dead person can make of crimesno defence, fo that his trial is truly a judging upon the hearing of one fide; and because, though his guilt should be ever so notorious, he is after death carried beyond the reach of human penalties: Such trials therefore can have no effect, but to punish the innocent heir, contrary to that most equitable rule, Culpa tenet fuos auctores. 2. Crimes may be extinguished by a remission from the sovereign. But a remission, tho it fecures the delinquent from the public refentment, the exercise of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever therefore foundston a remission, is liable in damages, to the private profecutor, in the fame manner as if he had been tried and found guilty. Even general acts of indemnity paffed in parliament, though they fecure against fuch penalties as law inflicts upon the criminal merely per modum pana, yet do not against the payreceived against the pannel, where the king's advocate ment of any pecuniary fine that is given by statute

Preferip-

Law-

Blackft.

Law of to the party injured, nor against the demand of any Scotland, claim competent to him in users of damages claim competent to him in name of damages.

55. Leffer injuries, which cannot be properly faid to affect the public peace, may be extinguished, either by the private party's expressly forgiving him, or by his being reconciled to the offender, after receiving the injury. Hence arises the rule, Dissimulatione tollitur injuria. But where the offence is of a higher nature. the party injured, though he may pass from the profecution, in fo far as his private interest is concerned, cannot preclude the king's advocate, or procuratorfiscal, from infifting ad vindictam publicam.

56. Crimes are also extinguished by prescription, which operates by the merc lapfe of time, without any act either of the fovereign or of the private fufferer. Crimes prescribe in 20 years; but in particular crimes, the prescription is limited by statute to a shorter time. No person can be prosecuted upon the act against wrongous imprisonment, after three years. High treafon. committed within his majefty's dominions, fuffers likewise a triennial prescription, if indictment be not found against the traitor within that time. All actions

brought noon any penal flatute made or to be made. Law of where the penalty is appropriated to the crown, expire Scotland in two years after committing the offence; and where the penalty goes to the crown or other profecutor, the profecutor must fue within one year, and the crown within two years after the year ended. Certain crimes are, without the aid of any statute, extinguished by a fhorter prescription than twenty years. By our old law, in the cases of rape, robbery, and hamesucken, the party injured was not heard after a filence of twenty-four hours; from a prefumption, that perfons could not be fo grossly injured, without immediately complaining: And it is probable, that a profecution for these crimes, if delayed for any considerable time. would be cast even at this day, or at least the punishment reftricted. Leffer injuries fuffer also a short prefeription; law prefuning forgiveness, from the nature of the offence, and the filence of the party. The particular space of time sufficient to establish this prefumption must be determined by the judge, according to circumftances.

LAW In England all law-proceedings Law. Language. were formerly written, as indeed all public proceedings were, in Norman or law French, and even the arguments of the counsel and decisions of the court were in the same barbarous dialect. An evident and shameful badge, it must be owned, of tyranny and foreign fervitude; being introduced under the aufpices of William the Norman, and his fons: whereby the observation of the Roman fatyrift was once more verified, that Gallia caufidicos docuit facunda Britannos. This continued till the reign of Edward III.; who, having employed his arms fuccefsfully in fubduing the crown of France, thought it unbefeeming the dignity of the victors to use any longer the language of a vanquished country. By a statute, therefore, passed in the 36th year of his reign, it was enacted, that for the future all pleas should be pleaded, shown, defended, answered, debated, and judged, in the English tongue; but be entered and inrolled in Latin: In like manner as Don Alonfo X. king of Callile (the great-grandfather of our Edward III.) obliged his subjects to use the Castilian tongue in all legal proceedings; and as, in 1286, the German language was ellablished in the courts of the empire. And perhaps, if our legislature had then directed that the writs themselves, which are mandates from the king to his subjects to persorm certain acts or to appear at certain places, should have been framed in the English language, according to the rule of our ancient law, it had not been very improper. But the record or enrolment of those writs and the proceedings thereon, which was calculated for the benefit of potterity, was more ferviceable (because more durable) in a dead and immutable language than in any flux or living one. The practifers, however, being used to the Norman language, and therefore imagining they could express their thoughts more aptly and more concisely in that than in any other, still continued to take their notes in law French; and of course, when those notes came to be published, under the denomination of re-

L A W

ports, they were printed in that barbarous dialect; which, Lawjoined to the additional terrors of a Gothic black let-Languages ter, has occasioned many a student to throw away his Plowden and Littleton, without yenturing to attack a page of them. And yet in reality, upon a nearer acquaintance, they would have found nothing very formidable in the language; which differs in its grammar and orthography as much from the modern French, as the diction of Chaucer and Gower does from that of Addison and Pope. Besides, as the English and Norman languages were concurrently used by our ancestors-for feveral centuries together, the two idioms have naturally affimilated, and mutually borrowed from each other: for which reason the grammatical construction of each is fo very much the fame, that I apprehend an Englishman (with a week's preparation) would underfland the laws of Normandy, collected in their grand coustumier, as well, if not better, than a Frenchman bred within the walls of Paris.

The Latin, which succeeded the French for the entry and enrolment of pleas, and which continued in ule for four centuries, answers fo nearly to the English (oftentimes word for word) that it is not at all furprisfing it should generally be imagined to be totally fabricated at home, with little more art or trouble than by adding Roman terminations to English words. Whereas in reality it is a very universal dialect, spread throughout all Europe at the irruption of the northern nations; and particularly accommodated and moulded to answer all the purposes of the lawyers with a peculiar exactness and precision. This is principally owing to the fimplicity, or (if the reader pleases) the poverty and baldness of its texture, calculated to express the ideas of mankind just as they arise in the human mind, without any rhetorical flourishes, or perplexed ornaments of style : for it may be observed, that those laws and ordinances, of public as well as private communities, are generally the most easily understood, where strength and perspicuity, not harmony or elegance of

Eaw- expression, have been principally consulted in compi- farios, pisusoupusouseus; cubiculum, xucuxxxxx; flium fa- Lawtongue in promulging their laws, as being more durable and more generally known to their conquered fubiects than their own Teutonic dialects, yet (either through choice or necessity) have frequently intermixed therein some words of a Gothic original; which is, more or less, the case in every country of Europe, and therefore not to be imputed as any peculiar blemish in our English legal latinity. The truth is, what is generally denominated law-Latin is in reality a mere technical language, calculated for eternal duration, and easy to be apprehended both in present and future times; and on those accounts best fuited to preserve those memorials which are intended for perpetual rules of action. The rude pyramids of Egypt have endured from the earliest ages, while the more modern and more elegant structures of Attica, Rome, and Palmyra, have funk beneath the stroke of time.

As to the objection of locking up the law in a strange and unknown tongue, this is of little weight with regard to records; which few have occasion to read, but fuch as do, or ought to, understand the rudiments of Latin. And besides, it may be observed of the law-Latin, as the very ingenious Sir John Davis observes of the law-French, "that it is fo very eafy to be learned, that the meanest wit that ever came to the study of the law doth come to understand it almost per-

fectly in ten days without a reader."

It is true, indeed, that the many terms of art, with which the law abounds, are fufficiently harsh when Latinized (yet not more so than those of other sciences), and may, as Mr Selden observes, give offence "to fome grammarians of squeamish stomachs, who would rather choose to live in ignerance of things the most useful and important, than to have their delicate ears wounded by the use of a word unknown to Cicero, Salluft, or the other writers of the Augustan age." Yet this is no more than must unavoidably happen when things of modern use, of which the Romans had no idea, and confequently no phrases to express them, come to be delivered in the Latin tongue. It would puzzle the most classical scholar to find an appellation, in his pure Latinity, for a conflable, a record, or a deed of feoffment : it is therefore to be imputed as much to necessity as ignorance, that they were styled in our forensic dialect, constabularius, recordum, and feoffamentum. Thus again, another uncouth word of our ancient laws (for I defend not the ridiculous barbarifms fometimes introduced by the ignorance of modern practifers), the substantive murdrum, or the verb murdrare, however harsh and unclassical it may seem, was necessarily framed to express a particular offence; fince no other word in being, occidere, interficere, necare, or the like, was fufficient to express the intention of the criminal, or quo animo the act was perpetrated; and therefore by no means came up to the notion of murder at prefent entertained by a law; viz. a killing with malice aforethought.

A fimilar necessity to this produced a fimilar effect at Byzantium, when the Roman laws were turned into Greek for the use of the oriental empire: for, without any regard to Attic elegance, the lawyers of the imperial courts made no scruple to translate fidei commif-

Language. ling them. These northern nations, or rather their le- milias, anisa-paulinas; repudium, pirusion; compromissium, Language. gillators, though they refolved to make use of the Latin xourtsours reverentia et obsequium, prospertia xaios oraxion; and the like. They fludied more the exact and precife import of the words, than the neatness and delicacy of their cadence. And it may be suggested, that the terms of the law are not more numerous, more uncouth, or more difficult to be explained by a teacher, than those of logic, physics, and the whole circle of Aristotle's philosophy; nay, even of the politer arts of architecture and its kindred studies, or the science of rhetoric itself. Sir Thomas More's famous legal question contains in it nothing more difficult, than the definition which in his time the philosophers currently gave of their materia prima, the groundwork of all natural knowledge; that it is neque quid, neque quantum, neque quale, neque aliquid eorum quibus ens determinatur; or its subsequent explanation by Adrian Heereboard, who affures us, that materia prima non eff corpus, neque per formam corporeitatis, neque per simplicem essentiam : est tamen ens, et quidem substantia, licet incompleta; babetque actum ex se entitativum, et simul est potentia subjectiva. The law, therefore, with regard to its technical phrases, stands upon the same footing with other studies, and

requests only the fame indulgence.

This technical Latin continued in use from the time of its first introduction, till the subversion of our ancient constitution under Cromwell; when, among many other innovations in the law, some for the better and fome for the worfe, the language of our records was altered and turned into English. But, at the restoration of king Charles, this novelty was no longer countenanced; the practifers finding it very difficult to exprefs themselves so concisely or significantly in any other language but the Latin. And thus it continued without any fensible inconvenience till about the year 1730, when it was again thought proper that the proceedings at law should be done into English, and it was accordingly fo ordered by flatute 4 Geo. 11. c. 26. This was done, in order that the common people might have knowledge and understanding of what was alleged or done for and against them in the process and pleadings, the judgment and entries in cause. Which purpose it is doubtful how well it has answered; but there is reason to suspect, that the people are now, after many years experience, altogether as ignorant in matters of law as before. On the other hand, these inconveniences have already arisen from the alteration; that now many clerks and attorneys are hardly able to read, much less to underitand, a record even of fo modern a date as the reign of George I. And it has much enhanced the expence of all legal proceedings : for fince the practifers are confined (for the fake of the stamp-duties, which are thereby confiderably increased) to write only a stated number of words in a fheet; and as the English language, through the multitude of its particles, is much more verbose than the Latin; it follows, that the number of sheets must be very much augmented by the change. The translation also of technical phrases, and the names of writs and other process, were found to be fo very ridiculous (a writ of nish prius, quare impedit, fieri facias, habeas corpus, and the reft, not being capable of an English dress with any degree of seriousness), that in two years time a new act was obliged to

thereby defeated every beneficial purpose of the former

Trial by Wager of LAW, (vadiatio legis;) a species of trial, in the English law, fo called, as another species is fivled " wager of battel," vadiatio duelli, (fee BATTEL): because, as in the wager of battel, the defendant gave a pledge, gage, or vadium, or try the cause by battel: fo here he was put in fureties or vadios, that at fuch a day he will make his law, that is, take the benefit which the law has allowed him, (fee the article TRIAL). For our ancestors confidered, that there were many cases where an innocent man, of good credit, might be overborne by a multitude of false witnesses; and therefore established this species of trial, by the oath of the defendant himself : for if he will abfolutely (wear himself not chargeable, and appears to be a person of reputation, he shall go free, and for ever acquitted of the debt, or other cause of action.

The manner of waging and making law is this. He that has waged, or given fecurity, to make his law, brings with him into court eleven of his neighbours: a custom which we find particularly described fo early as in the league between Alfred and Guthrun the Dane; for by the old Saxon constitution every man's credit in courts of law depended upon the opinion which his neighbours had of his veracity. defendant then, standing at the end of the bar, is admonished by the judges of the nature and danger of a And if he still persists, he is to repeat this or the like oath : " Hear this, ye justices, that I do not owe unto Richard Jones the fum of ten pounds nor any penny thereof, in manner and form as the faid Richard hath declared against me. So help me God," And thereupon his eleven neighbours or compurgators shall avow upon their oaths, that they believe in their consciences that he saith the truth; so that himfelf must be sworn de sidelitate, and the eleven de credu-

In the old Swedish or Gothic constitution, wager of law was not only permitted, as it is in criminal cases, unless the fact be extremely clear against the prisoner; but was also absolutely required, in many civil cases: which an author of their own very justly charges as being the fource of frequent perjury. This, he tells us, was owing to the Popish eccletiastics, who introduced this method of purgation from their canon law; and, having fown a plentiful crop of oaths in all judicial proceedings, reaped afterwards an ample harvest of perjuries: for perjuries were punished in part by pecuniary fines, payable to the coffers of the church. But with us in England wager of law is never required; and then only admitted, where an action is brought upon fuch matters as may be supposed to be privately transacted between the parties, and wherein the defendant may be prefumed to have made fatisfaction without being able to prove it. Therefore it. is only in actions of debt upon fimple contract, or for amercement, in actions of detinue, and of account, where the debt may have been paid, the goods reftored, or the account balanced, without any evidence of either. And by fuch wager of law (when admitted) the plaintiff is perpetually barred; for the law, in the fimplicity of the ancient times, prefumed that no one

1. I. C.

Law. be made, 6 Geo. II. c. 14. which allows all technical would for wear himself for any worldly thing. Wager Customwords to continue in the usual language, and has of law, however, lieth in a real action, where the tenant alleges he was not legally fummoned to appear, as well as in mere personal contracts.

The wager of law was never permitted but where the defendant bore a fair and unreproachable character; and it was also confined to such cases where a debt might be supposed to be discharged, or satisfaction made in private, without any witnesses to attest it: and many other prudential reftrictions accompanied this indulgence. But at length it was confidered, that (even under all its restrictions) it threw too great a temptation in the way of indigent or profligate men: and therefore by degrees new remedies were devited. and new forms of action were introduced, wherein no defendant is at liberty to wage his law. So that now no plaintiff need at all apprehend any danger from the hardiness of his debtor's conscience, unless he voluntarily chooses to rely on his adversary's veracity, by bringing an obsolete, instead of a modern, action. Therefore, one shall hardly hear at present of an action of debt brought upon a fimple contract: that being supplied by an action of trespass on the case for the breach of a promife or assumpfit; wherein, though the specific debt cannot be recovered, yet damages may, equivalent to the specific debt. And, this being an action of trespass, no law can be waged therein. instead of an action of detinue to recover the very thing detained, an action of trespals on the case in trover and conversion is usually brought; wherein, though the horse or other specific chattel cannot be had, yet the defendant shall pay damages for the conversion, equal to the value of the chattel; and for this trespass also no wager of law is allowed. In the room of actions of account, a bill in equity is usually filed: wherein, though the defendant answers upon his oath, yet such oath is not conclusive to the plaintiff; but he may prove every article by other evidence, in contradiction to what the defendant has fworn. So that wager of law is quite out of use, being avoided by the mode of bringing the action; but still it is not out of force. And therefore, when a new flatute inflicts a penalty, and gives an action of debt for recovering it, it is ufual to add, " in which no wager of law shall be allowed:" otherwise an hardy delinquent might escape any penalty of the law, by fwearing he had never incurred, or elfe had discharged it.

Custom-House Laws. The expedient of exacting duties on goods imported, or exported, has been adopted by every commercial nation in Europe. The attention of the British legislature has not been confined to the object of raising a revenue alone, but they have attempted by duties, exemptions, drawbacks, bounties, and other regulations, to direct the national trade into those channels that contribute most to the public benefit. And, in order to obtain every requifite information, all goods, exported or imported. whether liable to duty or not, are required to be entered at the respective custom houses; and, from these entries, accounts are regularly made up of the whole British trade, distinguishing the articles, their quantity and value, and the countries which fupply or re-

The objects of the British legislature may be reduced to the following heads:

Cuftomhouse Laws.

First, To encourage the employment of British shipping and seamen, for the purpose of supplying our

navy when public exigencies require. Secondly, To increase the quantity of money in the nation, by prohibiting the exportation of British coin, by encouraging exportation, and discouraging importation, and by promoting agriculture, fisheries, and manufactures. For these purposes, it is penal to entice certain manufacturers abroad, or export the tools used in their manufactures; the exportation of raw materials is, in most instances, prohibited; and their importation permitted free from duty, and fometimes rewarded with a bounty. The exportation of fome goods, manufactured to a certain length only (for example white cloth), is loaded with a duty, but permitted duty-free when the manufacture is carried to its full extent. The importation of rival manufactures is loaded with heavy duties, or absolutely prohibited. These restrictions are most severe towards nations with which the balance of trade is supposed against us, or which are confidered as our most formidable rivals in power or commerce. Upon this principle the commerce with France, till lately, laboured under the heaviest restrictions.

Thirdly, To fecure us plenty of necessaries for subfiftence and manufacture, by discouraging the exportation of some articles that consume by length of time, and regulating the corn-trade according to the exigen-

cies of the feafons.

Fourthly, To fecure the trade of the colonies to the mother-country, and preferve a mutual intercourfe, by encouraging the produce of their flaplecommodities, and reftraining their progress in thefe manufactures which they receive from us in exchange.

Hamilton'. The foundation of our commercial regulations in the Interdeblins famous act of navigation, which was first enacted duto Merchane ring the time of the commonwealth, and adopted by the first parliament after the restoration. The subflance of this act, and subsequent amendments, is as

£allarro

1. Goods from Alia, Aftica, and America, may not be imported, except in British ships duly navigated, or ships belonging to the British plantations; and they can only be imported from the place of their production or manufacture, or the port where they are usually first shipped for transportation. Goods of the Spanish or Portuguele plantations, imported from Spain and Portugal in British ships, bullion and some other inconsiderable articles are excepted.

The restriction on European goods is not universal, but extends to several of the bulkiest articles. Russian goods, masts, timber, boards, salt, pitch, resin, tar, hemp, flax, raisins, figs, prunes, olives, oil, corn, sugar, potashes, wine, and vinegar, may not be imported, except in ships belonging to Great Britain or Ireland, legally manned; nor Turkey goods and currants, except in ships British built; or in ships belonging to the country where these goods are produced or manufactured, or first shipped for exportation; and, if imported in foreign ships, they pay alien's duty.

In order to intitle a flip to the privileges of a British flip, it must be built in Britain, and belong entirely to British subjects; and the master, and threefourths of the masiners, must be British subjects, except in case of death, or unavoidable accidents. In

Nº 179.

time of war, the proportion of British mariners required is generally confined to one fourth; and the same proportion only is required in the Greenland sistery.

No goods may be imported into, or exported from, the plantations in Afin, Africa, or America, except in flips built in Britain, Ireland, or the plantations, or prize-flips, manned by British subjects, duly re-

giftered, and legally navigated.

The following goods, enumerated in the act of navigation and fiblequent acts, may not be exported from the plantation, except to fome other plantation or to Britain: Tobacco, cotton wool, indigo, ginger, fuftic, and other dying wood, molaffes, hemp, coppertore, beaver-fkins and other furs, pitch, tar, turpentine, mafts, yards, and bollprits, coffee, pymento, co-coa-nuts, whale fins, raw filks, pot and pearl affes. Rice and fugar were formerly comprehended in this lift, but their exportation is now permitted under certain reflirictions.

Iron may not be imported to Europe, except to Ireland; and none of the non-enumerated may be imported to any country north of Cape Finisterre, ex-

cept the Bay of Biscay and Ireland.

2. For the more effectual prevention of imuggling, no goods may be imported in vessels belonging to British subjects, and no wine, in any vessel whatever, unless the master have a manifest on board, containing the name, measure, and built of the ship, the place to which it belongs, and a diftinct enumeration of the goods on board, and places where they were laden. If the ship be cleared from any place under his Majefty's dominions, the manifest must be attested by the chief officer of the customs, or chief magistrate, who is required to transmit a copy thereof to the place of deftination. Ship-mafters must deliver copies of this manifest to the first custom-house officer who goes on board within four leagues of the shore, and also to the first who goes on board within the limits of any port, and must deliver the original manifest to the customhouse at their arrival, and make report of their cargo upon oath. If the report difagree with the manifelt, or either difagree with the cargo on board, the shipmafter is liable in the penalty of L. 200. The proprietors of the goods must enter them, and pay the duties within 20 days; otherwise they may be carried to the cultom-house, and fold by auction, if not relieved within fix months; and the overplus of the value, after paying duty and charges, paid to the proprie-

3. The importation of cattle, becf, mutton, and pork, except from Ireland, woollen cloths, malt, and various articles of hardware, cutlery, and earthen ware, is prohibited: Allo the following goods from Germany and the Netherlands; olive oil, pitch, tar, potafhes, rofin, falt, tobacco, wines, except Rhenifi wine, and Hungary wines from Hamburgh.

4. The importation of various other goods is refiricted by particular regulatious respecting the time and place of importation, the packages, the burden of the hip, the requisition of a licence, and other cir-

cumstances.

To guard more effectually against clandestine trade, the importation of some articles is only permitted in ships of a certain burden, whose operations are not easily concealed. Spirits must be imported in ships of too tons or upwards, except rum, and fpirits of British plantations, which are only restricted to 70 tons; wine, 60 tons; tea, tobacco, and suns, 50 tons; falt, 40 tons. Wine, spirits, and tobacco are also restricted in respect of the packages in which they may be imported.

5. Diamonds and precious flones, flax, flax-feed, linen-rags, beaver-wool, wool for clothiers, linen yarn unbleached, and most drugs used in dying, may be

imported duty free.

6. All goods imported are liable to duties, except fuch as are expressly exempted. The revenue of cuftoms is of great antiquity in Britain, but was newmodelled at the reftoration of Charles II. A fubfidy of tonnage on wines, and of poundage, or 1s. per pound value of other goods, was granted during the king's life, and, after feveral prolongations, rendered perpetual. A book of rates was composed for ascertaining these values; and articles not rated paid duty according to the value, as affirmed upon oath by the importer. If the goods be valued too low by the importer, the cultom-house officer may seize them, upon paying to the proprietor the value he fwore to, and 10 per cent. for profit; fuch goods to be fold, and the overplus paid into the customs. Various additional duties have been imposed; fome on all goods, fome on particular kinds; fome according to the rates, fome unconnected with the rates; fome with an allowance of certain abatements, fome without any allowance; the greater part to be paid down in ready money, and a few for which fecurity may be granted; often with variations, according to the ship's place and circumstances of importation. The number of branches amounted to upwards of 50; and fometimes more than 10 were chargeable on the same articles. By this means, the revenue of the customs has be-

		Low duty-		
Wheat at or	above	48 s.	per gr	6
Rye,		328.		3
Peafe and bea	ins,	328.		3
Oats,	-	16 s.		2
Barley,	-	24.8.		2

The duties, when the prices are lower than in the first column, amount to a prohibition. When the prices are higher than in the column prefixed to the bounty, no exportation is permitted. When oats are under the bounty price, oatmeal is intitled to a bounty of 2s. 6d. per quarter.

10. Bounties are allowed on the exportation of refined fugar, fail cloth, linen under limited prices, filk fluffs of British manufacture, cordage, spirits when barley is under 24.9. beef, pork, and the following kinds of fish, falmon, herrings, pitchards, cod, ling,

flake, and fprats.

Various other bounties are allowed for the encouragement of our filteries. Ships from 150 to 300 tens employed in the Greenland whale-fishery, and conforming to the regulations preferibed, are allowed 30s. per ton. Veffels employed in the herrings filtery receive 20s. per ton, befides a bounty on the herrings caught and cured, amounting in fome cafes to 4s. per barrel. Other bounties are granted to a limited number of the moft fuccefaful veffels employed in the her-

Vol. IX. Part II.

come a fubject of much intricacy. The inconvenient Law. ces which this gave rife to are now removed by the confolidation act; which appoints one fixed duty for each article free from fractions, instead of the various branches to which they were formerly fubject.

7. Goods of moft kinds may be exported duty free when regularly entered; and those that have paid duty on importation are generally intitled to drawback of part, sometimes of the whole, when re-exported within three years, upon certificate that the duties were paid on importation, and oath of their identity. In some cases, a bounty is given on manufactured goods, when the materials from which they are manufactured awe paid duty on importation; and manufactures subject to excife, have generally the whole op part of the excised unies returned.

8. The following goods are prohibited to be exported; white-afters, horns, unwrought hides of black-cattle, tallow, com, brafs, copper, engines for knitting flockings, tools for cotton, linen, woollen, filk, iron, and fleel manufactures; wool, woolfells, woollen varn, fullers earth, fulling clay, and tobacco pipel or varn, fullers earth, fulling clay, and tobacco pipe.

clay

O. The object of the laws refpecking the corn-trade is to encourage agriculture, by not only permitting the free exportation, but rewarding it with a bounty when the prices are low, and checking the importation by a heavy duty; and, to prevent fearcity, by prohibiting the exportation when the prices are high, and permitting importation at an eafly duty. Various temporary laws have been enacted for these purposes, and fometimes other expedients employed in times of fearcity, such as prohibiting the diffillery from corn, and manufacture of starch: And by a permanent law 1773, the low duties and bounties are regulated as under:

	Bounty.	
5 d.	under 44 s. 5 s.	
3 d.	28 s. 3 s.	
3 d.	28 s. no bounty.

, d.	228. 29 6	d.

ring and Newfoundland fisheries, and in the fouthern whale fishery.

It is unnecessary and impracticable, in this place, to enter into a full detail of our custom-house laws. Indeed, all that can be admitted into a work of this kind, must convey but very imperfect information : and even that little becomes useless in a short time from alterations in the law. We have therefore only marked the general outlines in the prefent article: which, however, will be fufficient to enable the reader to judge of the principles upon which the British legislature has acted. How far the means employed have contributed to the ends proposed, and how far the ends themselves are always wise; or whether a trade encumbered by fewer restrictions would not prove more extensive and beneficial; has been a subiect of much discussion: and of late a more liberal syflem has been embraced in our commercial treaty with France, and in other regulations.

Mercantile Laws. The laws relating to commercial and maritime affairs approach nearer to uniformity

4 Z through

tions have been taken from the Roman law; others have been fuggefted by experience, during the progress of commerce; and the whole have been gradually reduced to a fystem, and adopted into the laws of trading nations, but with fome local varieties and exceptions.

The British legislature has enacted many statutes refrecting commerce : vet the greater part of our mercantile law is to be collected from the decisions of our courts of justice, founded on the custom of merchants. A proof of fuch custom, where no direct statute interferes, determines the controverly, and becomes a precedent for regulating like cases afterwards. The exiftence of a cultom not formerly recognifed, is, in England, determined by a jury of merchants.

The most common mercantile contracts are those between buyer and feller; between factor and employer; between partners; between the owners, masters, mariners, and freighters of ships; between infurers and the owners of the subject insured; and between the parties concerned in transacting bills of exchange. See FACTORAGE, SALE, PARTNERSHIP, INSURANCE, BILL,

&c. and the next article.

Maritime LAWS. The most ancient system of maritime laws is that of Rhodes, which was in force during the time of the Grecian empire, and afterwards incorporated into the Roman law. Although, in fome parts, not applicable to the prefent state of trade, and, in others, now hardly intelligible, it contains the groundwork of the most equitable and beneficial rules observed in modern commerce. A like fystem was fet forth by Richard I. of England, called the Statutes of Oleron; and another, by the town of Wisby, in the island of Gothland. From these systems, improved and enlarged in the course of time, our general maritime law is derived. The jurisdiction of matters purely maritime belongs, in England, to the court of admiralty, which proceeds on the civil law; but their proceedings are Subject to the controul, and their decisions to the review, of the fuperior courts.

We shall here consider the obligations which subsist between the masters or owners of ships, the freighters,

and the furnishers of provisions or repairs.

1. Masters and Freighters. A charter-party is a contract between the master and freighters, in which the ship and voyage is described, and the time and conditions of performing it are ascertained.

The freight is most frequently determined for the whole voyage, without respect to time. Sometimes it

depends on the time.

In the former case, it is either fixed at a certain sum for the whole cargo; or fo much per ton, barrel-bulk, or other weight or measure; or fo much per cent. on the value of the cargo. This last is common on goods fent to America; and the invoices are produced to afcertain the value.

The burden of the ship is generally mentioned in the contract, in this manner, one bundred tons, or thereby; and the number mentioned ought not to differ above 5 tons, at most, from the exact measure. If a certain fum be agreed on for the freight of the ship, it must all be paid, although the ship, when measured, should prove lefs, unlefs the burden be warranted. If the

on other fubjects. Some of the fundamental regula- much a head, and some of them die on the passage, freight is only due for fuch as are delivered alive; but, if for lading them, it is due for all that were put on board.

When a whole ship is freighted, if the master fuffers any other goods besides those of the freighter to be

put on board, he is liable for damages.

It is common to mention the number of days that. the ship shall continue at each port to load or unload. The expression used is, work weather days; to fignify, that Sundays, holidays, and days when the weather ftops the work, are not reckoned. If the fhip be detained longer, a daily allowance is often agreed on, in name of demurrage.

If the voyage be completed in terms of the agreement, without any misfortune, the master has a right to demand payment of the freight before he delivers the goods. But if the fafe delivery be prevented by any fault or accident, the parties are liable, according to the following rules.

If the merchant do not load the ship within the time agreed on, the mafter may eugage with another,

and recover damages.

If the merchant load the ship, and recal it after it has fet fail, he must pay the whole freight; but if he unload it before it fets fail, he is liable for damages only.

If a merchant loads goods which it is not lawful toexport, and the ship be prevented from proceeding on that account, he must pay the freight notwith-

If the shipmafter be not ready to proceed on the voyage at the time agreed on, the merchant may load the whole, or part of the cargo, on board another thip, and recover damages; but chance, or notorious accident, by the marine law, releafes the mafter from damages.

If an embargo be laid on the ship before it fails, the charter-party is diffolved, and the merchant pays the expence of loading and unloading; but if the embargobe only for a fhort limited time, the voyage shall be performed when it expires, and neither party is liable for damages.

If the shipmaster sails to any other port than that agreed on, w.; hout necessity, he is liable for damages : if through necessity, he must fail to the port agreed on, at his own expence.

If a ship be taken by the enemy, and retaken or ranfomed, the charter party continues in force.

If the mafter transfer the goods from his own ships to another, without necessity, and they perish, he is liable for the value; but if his own ship be in imminent danger, the goods may be put on board another thip at the risk of the owner.

If a ship be freighted out and home, and a sum agreed on for the whole voyage, nothing is due till it return; and the whole is loft if the ship be loft on the

If a certain fum be specified for the homeward voyage, it is due, although the factor abroad should have no goods to fend home.

In the case of a ship freighted to Madeira, Carolina, and home, a particular freight fixed for the homeward voyage, and an option referved for the factor at Carolina

Carolina to decline it, unless the ship arrived before Ist of March : the shipmaster, foreseeing he could not arrive there within that time, and might be difappointed of a freight, did not go there at all. He was found liable in damages, as the obligation was absolute on his part, and conditional only on the

If the goods be damaged without fault of the ship or mafter, the owner is not obliged to receive them and pay freight, but he must either receive the whole, or abandon the whole; he cannot choose those that are in best order, and reject the others. If the goods be damaged through the infusficiency of the thip, the mafter is liable for the fame; but, if it be owing to firefs of weather, he is not accountable. It is customary for shipmasters, when they suspect damage, to take a protest against wind and weather at their arrival. But as this is the declaration of a party, it does not bear credit, unless supported by collateral circum.

If part of the goods be thrown over-board, or taken by the enemy, the part delivered pays freight.

The shipmaster is accountable for all the goods rereived on board, by himfelf or mariners, unless they perish by the act of Gon, or of the king's enemies.

Shipmafters are not liable for leakage on liquors; nor accountable for the contents of packages, unless

packed and delivered in their presence.

Upon a principle of equity, that the labourer is worthy of his hire, differences arising with regard to freight, when the case is doubtful, ought rather to be determined in favour of the shipmaster.

2. Ship and Owners with Creditors. When debts are contracted for provisions or repairs to a ship, or arise from a failure in any of the above mentioned obligations, the ship and tackle, and the owners, are liable for the debt, as well as the master.

By the mercantile law, the owners are liable in all cases, without limitation; but by statute, they are not liable for embezzlement beyond their value of ship,

tackle, and freight.

A shipmaster may pledge his ship for necessary repairs during a voyage; and this hypothecation is implied by the maritime law when fuch debts are con-This regulation is necessary, and is therefore adopted by all commercial nations; for, otherwise, the mafter might not find credit for necessary repairs, and the ship might be lost. If repairs be made at dif-

The relief against the ship is competent to the court of admiralty in England, only when repairs are furnished during the course of a voyage; for the necessity of the case extends no further If a ship be repaired at home (e. g. upon the river Thames), the creditor is only intitled to relief at common law.

The creditor may fue either the mafters or owners: but if he undertook the work on the special promise

If the mafter buys provisions on credit, the owners are liable for the debt, though they have given him

money to pay them

If a ship be mortgaged, and afterwards lost at sea, the owners must pay the debt; for the mortgage is only an additional fecurity, though there be no express words to that purpose in the covenant.

If a ship be taken by the enemy, and ransomed, the Law. owners are liable to pay the ranfom, though the ranfomer die in the hands of the captors.

3. Owners of Ship and cargo with each other. There is a mutual obligation which fubfifts between all the owners of a ship and cargo. In time of danger, it is often necessary to incur a certain loss of part for the greater fecurity of the rest; to cut a cable; to lighten the ship, by throwing part of the goods overboard; to run it ashore; or the like : and as it is unreasonable that the owners of the thing exposed for the common fafety should bear the whole loss, it is defrayed by an equal contribution among the proprietors of the ship, cargo, and freight. This is the famous Lex Rhodia de jactu, and is now called a general average.

The custom of valuing goods which contribute to a general average, is not uniform in all places. They are generally valued at the price they yield at the port of destination, charges deducted; and goods thrown overboard are valued at the price they would have yielded there. Sailors wages, cloaths and money belonging to paffengers, and goods belonging to the king. pay no general average; but proprietors of gold and filver, in case of goods being thrown overboard, con-

tribute to the full extent of their interest.

The following particulars are charged as general average: Damage fuftained in an engagement with the enemy; attendance on the wounded, and rewards given for service in time of danger, or gratuities to the widows or children of the flain; ranfom; goods given to the enemy in the nature of ranfom; charges of bringing the ship to a place of safety when in danger from the enemy, or waiting for convoy; charges of quarantine; goods thrown overboard; masts or rigging cut; holes cut in the ship to clear it of water; pilotage, when a lake is fprung; damage, when voluntarily run aground, and expence of bringing it afloat; goods loft by being put in a lighter; the long boat loft in lightening the ship in time of danger; hire of cables and anchors; charges of laying in ballaft, victualling, and guarding the ship when detained; charges at law, in reclaiming the ship and cargo; interest and commission on all these debursements.

Though goods put on board a lighter, and loft, are charged as a general average; yet if the lighter be faved, and the ship with the rest of the goods be lost, the goods in the lighter belong to their respective proprietors, without being liable to any contribution.

If part of the goods be plundered by a pirate, the proprietor or shipmaster is not intitled to any contri-

The effential circumstances that constitute a general average are these; the loss must be the effect of a voluntary action; and the object of that action the common fafety of the whole. Quarantine, which is allowed, feems not to fall within this defeription.

4. Quarantine. See QUARANTINE.

5. Wrecks. See WRECK.

6. Impress. See IMPRESSING. . Infurance. See INSURANCE.

Game LAWS. See the article GAME.

Sir William Blackstone, treating of the alterations in our laws, and mentioning franchifes granted of chafe and free warren, as well to preferve the breed of aniLaw. mals, as to indulge the subject, adds, " From a simi- leasehold for 99 years of L. 150 per annum. 3. Being Law. lar principle to which, though the forest laws are now mitigated, and by degrees grown entirely obfolete; yet from this root has fprung a baflard flip, known by the name of the game-law, now arrived to and wantoning in its highest vigour: both founded upon the fame unreasonable notion of permanent property in wild creatures; and both productive of the same tyranny to the commons; but with this difference, that the forest-laws established only one mighty hunter throughout the land; the game laws have raifed a little Nimrod in every manor. And in one respect the ancient law was much less unreasonable than the modern; for the king's grantee of a chase or free-warren, might kill game in every part of his franchife; but now, though a freeholder of less than L. 100 a year is forbidden to kill partridge upon his own effate, yet nobody else (not even the lord of the manor, unless he hath a grant of free warren) can do it without committing a

trefpass and subjecting himself to an action.

Under the article GAME, the destroying such beasts and fowls as are ranked under that denomination, was observed (upon the old principles of the forest-law) to be a trespass and offence in all persons alike, who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or at least a manor of their own. But the laws called the game-laws have also inflicted additional punishments (chiefly pecuniary) on persons guilty of this general offence, unless they be people of such rank or fortune as is therein particularly specified. All persons, therefore, of what property or distinction soever, that kill game out of their own territories, or even upon their own estates, without the king's licence expressed by the grant of a franchife, are guilty of the first original offence of encroaching on the royal prerogative. And those indigent persons who do so, without having fuch rank or fortune as is generally called a qualification, are guilty, not only of the original offence, but of the aggravations also created by the statutes for preferving the game: which aggravations are fo feverely punished, and those punishments so implacably inflicted, that the offence against the king is feldom thought of, provided the miferable delinquent can make his peace with the lord of the manor. The only rational footing upon which this offence, thus aggravated, can be confidered as a crime, is, that in low and indigent perfons it promotes idleness, and takes them away from their proper employments and callings: which is an offence against the public police and economy of the commonwealth.

The flatutes for preserving the game are many and various, and not a little obscure and intricate; it being remarked, that in one flatute only, 5 Ann. c. 14. there is false grammar in no fewer than fix places, befides other mistakes: the occasion of which, or what denomination of persons were probably the penners of these statutes, it is unnecessary here to inquire. It may be in general fufficient to observe, that the quafifications for killing game, as they are usually called, or more properly the exemptions from the penaltics inflicted by the statute law, are, 1. The having a freehold eftate of L. 100 per annum; there being fifty times the property required to enable a man to kill a partridge, as to vote for a knight of the shire. 2, A the fon and heir apparent of an efquire (a very loofe and vague description) or person of superior degree, 4. Being the owner or keeper of a forest, park, chase, or waren. For unqualified perfons transgressing these laws, by killing game, keeping engines for that purpofe, or even having game in their cultody, or for perfons (however qualified) that kill game, or have it in possession, at unseasonable times of the year, or unseafonable hours of the day or night, on Sundays or on Christmas day, there are various penalties assigned, corporal and pecuniary, by different statutes (after-mentioned), on any of which, but only on one at a time. the justices may convict in a summary way, or (in most of them) profecutions may be carried on at the affizes. And, lattly, by statute 28 Geo. II. c. 12. no person, however qualified to kill, may make merchandise of this valuable privilege, by felling or exposing to fale any game, on pain of like forfeiture as if he had no qualification.

The flatutes above referred to are as follow. No person shall take pheasants or partridges with engines in another man's ground, without licence, on pain of 101. flat. 11 Hen. VII. c. 13. If any person shall take or kill any pheafants or partridges with any net in the night-time, they shall forfeit 20 s. for every pheasant, and tos. for every partridge taken; and hunting with spaniels in standing corn, incurs a forfeiture of 40 s. 23 Eliz. c. 10. Those who kill any pheasant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 20s. for every fowl and hare : and felling, or buying to fell again, any hare, pheafant, &c. the forfeiture is 10s. for each hare, &c. 1 Jac. I. c. 17. Also pheasants or partridges are not to be taken between the first of July and the last of August, on pain of imprisonment for a month, unless the offenders pay 20s. for every pheafant, &c. killed: and constables, having a justice of peace's warrant, may fearch for game and nets, in the possession of persons not qualified by law to kill game or to keep such nets, 7 Jac. I. c. 11. Constables, by a warrant of a justice of peace, are to fearch houses of suspected persons for game : and if any game be found upon them, and they do not give a good account how they came by the same, they shall forfeit for every hare, pheasant, or partridge, not under 5s. nor exceeding 20s. And inferior tradefmen hunting, &c. are subject to the penalties of the act, and may likewise be sued for trespass. If officers of the army or foldiers kill game without leave, they forfeit 51. an officer, and 10s. a foldier; 4 & 5 W. and M. c. 23. Higglers, chapmen, carriers, inn-keepers, victuallers, &c. having in their custody hare, pheafant, partridge, heath-game, &c. (except fent by fome person qualified to kill game), shall forfeit for every hare and fowl 51. to be levied by diffress and fale of their goods, being proved by one witness, before a justice ; and for want of distress shall be committed to the house of correction for three months: one moiety of the forfeiture to the informer. and the other to the poor. And felling game, or offering the fame to fale, incurs the like penalty; wherein hare and other game found in a shop, &c. is adjudged an exposing to fale : killing hares in the night is liable to the fame penalties : and if any persons shall drive wild-fowls with nets, between the first day of July

and the first of September, they shall forfeit, 5 s. for every fowl; 5 Ann. c. 14. 9 Ann. c. 25. If any unqualified person shall keep a gun, he shall forfeit 101; and persons being qualified may take guns from those that are not, and break them; 21 & 22 Car. II. c. 25. and 33 H. VIII. c. 6. One justice of peace, upon examination and proof of the offence, may commit the offender till he hath paid the forfeiture of 10 l. And persons, not qualified by law, keeping dogs, nets, or other engines to kill game, being convicted thereof before a justice of peace, shall forfeit 51. or be sent to the house of correction for three months; and the dogs, game, &c. shall be taken from them, by the statute 5 Ann. If a person hunt upon the ground of another, fuch other person cannot justify killing of his dogs, as appears by 2 Roll. Abr. 567. But it was otherwise adjudged Mich. 33 Car. II. in C. B. 2 Cro. 44. and fee 3. Lev. xxviii. In actions of debt, qui tam, &c. by a common informer on the flatute 5 Ann. for 151, wherein the plaintiff declared on two feveral counts, one for 101, for killing two partridges, the other for 51, for keeping an engine to destroy the game, not being qualified, &c. the plaintiff had a verdict for 51. only: this action was brought by virtue of the stat. 8 Geo. I. See stat. 9 Geo. I. c. 22. See likewife 24 Geo. 11. c. 34. for the better prefervation of the game in Scotland. By the flat. 26 Geo. II. c. 2. all fuits and actions brought by virtue of stat. 8 Geo. I. c .- for the recovery of any pecuniary penalty, or fum of money, for offences committed against any law for the better prefervation of the game, shall be brought before the end of the fecond term after the offence committed.

By 28 Geo. II. c. 12. persons selling, or exposing to sale, any game, are liable to the penaltics inflicted by 5 Ann. c. 14. on higglers, &c. offering game to sale: and game found in the house or position of a poulterer, falesman, fishmonger, cook, or pastry-cook,

is deemed exposing thereof to sale.

By 2 Geo, III. c. 19. after the rll June 1762, no person may take, kill, buy or sell, or have in his custody, any partridge, between 12th February and 1th September, or pheasant between 11 February and 1th October, or heath-soul between 1th Junary and 20th August, or grouse between 1th December and 25th July, in any year; pheasants taken in their proper season, and kept in mews, or breeding places, excepted: and persons offending in any of the cases aforestaid, forseit 51, per bird, to the prosecutor, to be recovered, with full costs, in any of the courts at Westmister. By this act, likewise, the whole of the pecuniary penalties under the 8 Geo. L. c. 19. may be sued for, and recovered to the fole use of the prosecutor, with double costs; and no part thereof to go to the poor of the parish.

By 5 George III. c. 14, persons convicted of entering warrens in the night time, and taking or killing coneya there, or aiding or assistance, may be punished by transportation, or by whipping, fine, or imprisonment. Persons convided on this act, not liable to be convicted under any former act. This act does not extend to the destroying coneys in the day-time, on the sea and river banks in the county of Lincoln, &c. No satisfaction to be made for damages occasioned by entry, unless they exceed 1s. It may not be improper to mention an act lately made,

and not yet repealed, viz. 10 Geo III. c. 19. for prefervation of the game, which shows the importance of the object. It is thereby enacted, That if any perfon kill any hare, &c. between fun setting and funrising, or use any gun, &c. for defroying game, shall for the first offence be imprisoned for any time not exceeding fix nor less than three months: if guilty of a second offence, after conviction of a sirit, to be imprisoned for any time not exceeding 12 months nor less than fix; and shall also, within three days after the time of his commitment, either for the first or for any other offence, be once publicly whipped.

By 25 George III. c. 50. and 31 George III. c. 21. every person in Great Britain (the royal family excepted), who shall, after July 1. 1785, use any dog, gun, net, or other engine, for the taking or destruction of game (not as acting as gamekeeper), shall deliver in a paper or account in writing, containing his name and place of abode, to the clerk of the peace or his deputy, and annually take out a certificate thereof; and every fuch certificate shall be charged with a stamp-duty of L. 2, 2 s. (and an additional L. 1, 1 s. by 31 Geo. III. c. 21.) making in the whole L. 3, 3 s .-Every deputation of a gamekeeper shall be registered. with the elerk of the peace, and fuch gamekeeper shall annually take out a certificate thereof; which certiscate shall be charged with a stamp duty of 10s. 6d. (and an additional 10 s. 6d. by 31 Geo. III. c. 21) making in the whole L. I, Is .- The duties to be under the management of the commissioners of the stamp-

From and after the faid ift of July 1785, the clerk of the peace finall annually deliver to persons requiring the same, duly stamped, a certificate or licence according to the form therein mentioned, for which he still be intitled to demand 18. for his trouble; and on resulad or neglect to deliver the same, forfeit L. 20.

—Every certificate to bear date the day when sifted, and to continue in force until the 11k day of July then.

following, on penalty of 201.

After the 1st day of July 1785, any perfon that shall use any greyhound, hound, pointer, letting-dog, spaniel, or other dog, or any gun, net, or engine, for taking or killing of game, without a certificate, is liable to the penalty of 201. And if any gamekeeper shall, for the space of 20 days after the said 1st day of July, or if any gamekeeper thereafter to be appointed shall, for the space of 20 days next after such appointment, neglect or reside to register his deputation and take out a certificate thereof, he is liable to the penalty of 201.

The clerks of the peace are to transmit to the famp-office in London alphabetical lifts of the certificates granted in every year before the 1st day of August, under penalty of 201. These lists are to be kept at the flamp-office in London, and there to be imprected on payment of 1s.: And the commissioners of the flamp duties are, once or oftener in every year, as so foon as such lifts are transmitted to them, to cause the same to be published in the newspapers circulating in each county, or such public paper as they shall think.

most proper.

day-time, on the fea and river banks in the county of Lincoln, &c. No fatisfaction to be made for dadeputation, and taken out a certificate thereof, final, mages occasioned by entry, unless they exceed is. It be changed, and a new gamekeeper appointed in his may not be improper to mention an act lately made, stead, the first extificate is declared null and void,

and the person acting under the same after notice, is flight from justice he visited Italy; and was banished Law. liable to the penalty of 201. And any person in purfuit of game, who shall refuse to produce his certificate, or to tell his name and place of abode, or shall give in any falle or fictitious name or place of abode to any person requiring the same, who shall have obtained a certificate, is liable to the penalty of sol.

The certificates are not to authorife persons to kill game at any time prohibited by law, nor to give any perfon any right to kill game, unless such person shall be qualified fo to do by the laws now in being, but shall be liable to the fame penalties as if this act had not passed. [So that though by this act qualified and unqualified perfons are equally included, yet having a certificate does not give an unqualified perfon a right to kill game; the point of right ftill ftands upon the former acts of parliament; and any unqualified person killing game without a certificate, is not only liable to the penalty inflicted by this act, but also to all the Military LAW. See MILITARY and MARINE.

fromer penalties relating to the killing of game, &c. 7 Witnesses refusing to appear on justices fummons, or appearing and refusing to give evidence, forfeit 10 l. The certificates obtained under deputations, not to be given in evidence for killing of game by a gamekeeper out of the manor, in respect of which such deputation or appointment was given and made. Persons counterfeiting stamps to fuffer death as felons.

Penalties exceeding 20 l. are to be recovered in any of his majefty's courts of record at Westminster; and penalties not exceeding 201, are recoverable before two justices, and may be levied by distress. The whole

of the penalties go to the informer.

LAW (John), the famous projector, was the eldeft fon of a goldfmith burgefs in Edinburgh, by Elizabeth Campbell heirefs of Laurieston near that city; and was born about the year 1681. He was bred to no business; but possessed great abilities, and a very fertile invention. He had the address, when but a very young man, to recommend himself to the king's ministers in Scotland to arrange and fit the revenue accounts, which were in great diforder at the time of fettling the equivalent before the union of the king-The attention of the Scottish parliament being also turned to the contrivance of some means for fupplying the kingdom with money, and facilitating the circulation of specie, for want of which the industry of Scotland languished; he proposed to them. for these purposes; the establishment of a bank of a particular kind, which he feems to have imagined might iffue paper to the amount of the whole value of all the lands in the country; but this scheme the parliament by no means thought it expedient to

His father dying about the year 1704, Law fucseeded to the small estate of Laurieston; but the rents being infufficient for his expences, he had recourfe to gaming. He was tall and graceful in his person, and much addicted to gallantry and finery; and giving a fort of ton at Edinburgh, he went commonly by the name of Beau Law. He was forced to fly his conntry, however, in the midft of his career, in confequence of having fought a duel and killed his antagonist; and in some of the French literary gazettes it is faid that he run off with a married lady. In his

from Venice and Genoa, because he contrived to drain the youth of these cities of their money, by his fuperiority in calculation, that is, by being a cheat and a sharper. He wandered over all Italy, living on the event of the most fingular bets and wagers, which feemed to be advantage us to those who were curious after novelty; but which were always of the most certain success with regard to him. He arrived at Turin, and proposed his system to the duke of Savoy, who faw attonce, that, by deceiving his subjects, he would in a fhort time have the whole money of the kingdom in his poffession: but that sagacious prince asking him how his subjects were to pay their taxes when all their money should be gone, Law was difconcerted, not expecting fuch a question.

Having been banished from Italy, and thus repulsed at Turin, Law proceeded to Paris, where he was already known as a projector. In the lifetime of Louis XIV. he had transmitted his schemes to Desmarch and to Chamillard, who had rejected them as dan-gerous innovations. He now proposed them to the Duc d'Orleans, who desired Noailles to examine them, to be as favourable in his report as possible; and to remark fuch of them as were practicable. Noailles called in the affiftance of feveral merchants and bankers who were averse to the system. Law then propofed the establishment of a bank, composed of a company, with a flock of fix millions. Such an inftitution promifed to be very advantageous to commerce. An arret of the 2d March 1716 established this bank, by authority, in favour of Law and his affociates; two hundred thousand shares were instituted of one thoufand livres each; and Law deposited in it to the value of two or three thousand crowns which he had accumulated in Italy, by gaming or otherwise. This establishment very much displeased the bankers, because at the beginning bufiness was transacted here at a very small premium, which the old financiers had charged very highly. Many people had at first little confidence in this bank; but when it was found that the payments were made with quickness and punctuality, they began to prefer its notes to ready money. In confequence of this, shares rose to more than 20 times their original value; and in 1710 their valuation was more than 80 times the amount of all the current specie in the kingdom. But the following year, this great fabric of false credit fell to the ground, and almost overthrew the French government, ruining fome thousands of families; and it is remarkable, that the same desparate game was played by the South Sea directors in England, in the fame fatal year, 1720. Law being exiled as foon as the credit of his projects began to fail, retired to Venice, where he died in 1729.

The principles upon which Law's original scheme was founded, are explained by himself in A Discourse concerning Money and Trade, which he published in Scotland where (as we have feen) he first proposed it. " The fplendid but vitionary ideas which are fet forth in that and fome other works upon the fame principles (Dr Adam Smith observes), still continue to make an impression upon many people, and have perhaps in part contributed to that excess of banking which has of late been complained of both in Scotland and in other

places."

LAW (Edmund), D. D. bishop of Carlisle, was born in the parish of Cartmel in Lancashire, in the year 1703. His father, who was a clergyman, held a fmall chapel in that neighourhood; but the family had been fituated at Askham, in the county of Westmoreland. He was educated for fome time at Cartmel fchool, afterwards at the free grammar-school at Kendal : from which he went, very well instructed in the learning of graninar schools, to St John's college in

Soon after taking his first degree, he was elected fellow of Christ-college in that university. During his residence in which college, he became known to the public by a Translation of Archbishop King's Essay upon the Origin of Evil, with copious notes; in which many metaphyfical fubjects, curious and interesting in their own nature, are treated of with great ingenuity, learning, and novelty. To this work was prefixed, under the name of a Preliminary Differtation, a very valuable piece, written by the reverend Mr Gay of Sidney college. Our bishop always spoke of this gentleman in terms of the greatest respect. In the Bible and in the writings of Mr Locke, no man, he used to fay, was so well verfed.

He also, whilft at Christ-college, undertook and went through a very laborious part in preparing for the prefs an edition of Stephens's Thefaurus. His acfity, was principally with Dr Waterland, the learned master of Magdalen college; Dr Jortin, a name known to every feholar; and Dr Taylor, the editor of Demof-

In the year 1737 he was prefented by the university to the living of Graystock in the county of Cumberland, a rectory of about 300 l. a-year. The advowfon of this benefice belonged to the family of Howards of Graystock, but devolved to the university, for this turn, by virtue of an act of parliament, which transfers to thefe two bodies the nomination to fuch benefices as appertain, at the time of the vacancy, to the patronage of a Roman eatholic. The right, however, of the university was conteffed; and it was not till after a law-fuit of two years continuance that Mr Law was fettled in his living. Soon after this, he married Mary the daughter of John land; a lady whose character is remembered with tendernefs and efteem by all who knew her.

In 1743, he was promoted by Sir George Fleming, bishop of Carlisle, to the archdeaconry of that diocese; and in 1746 went from Grayflock to refide at Salkeld, a pleasant village upon the banks of the river Eden, the rectory of which is annexed to the archdeaconry. Mr Law was not one of those who lose and forget themfelves in the country. During his refidence at Salkeld, he published Confiderations on the Theory of Religion: to which were fubjoined, Reflections on the * Life and Character of Christ; and an Appendix concerning the ufe of the words Soul and Spirit in holy feripture, and the flate of the dead there de-

Dr Keene held at this time, with the bishopric of Defiring to leave the univerfity, he procured Dr Law to be elected to fucceed him in that station. This tock place in the year 1756; in which year Dr Law refigned his archdeaconry in favour of Mr Eyre, a bro- Law. ther in law of Dr Keene. Two years before this, he had proceeded to his degree of Doctor in Divinity ; in his public exercise for which, he defended the doctrine of what is usually called the " fleep of the foul."

About the year 1760, he was appointed head librarian of the university; a situation which, as it procured an eafy and quick accefs to books, was peculiarly agreeable to his tafte and habits. Some time after this, he was also appointed casuiftical professor. In the year 1762, he fuffered an irreparable lofs by the death of his lady; a loss in itfelf every way afflicting. and rendered more fo by the fituation of his family, which then confifted of eleven children, many of them very young. Some years afterwards, he received feveral preferments, which were rather honourable expressions of regard from his friends than of much ad-

vantage to his fortune.

By Dr Cornwallis, then bishop of Litchfield, afterwards archbishop of Canterbury, who had been his pupil at Christ-college, he was appointed to the archdeaconry of Staffordshire, and to a prebend in the church of Litchfield. By his old acquaintance Dr Green, bishop of Lincoln, he was made a prebendary of that church. But in the year 1767, by the intervention of the duke of Newcattle, to whose interest, in the memorable contest for the high-stewardship of the university, he had adhered in opposition to some temptations, he obtained a stall in the church of Durham. The year after this, the duke of Grafton, who had a fhort time before been elected chancellor of the university, recommended the master of Peterhouse to his majesty for the bishopric of Carlisle. This recommendation was made not only without folicitation onhis part or that of his friends, but without his knowledge, until the duke's intention in his favour was fignified to him by the archbishop.

In or about the year 1777, our bishop gave to the public a handsome edition, in three volumes quarto. of the Works of Mr Locke, with a Life of the Author, and a Preface. Mr Locke's writings and character he heid in the highest esteem, and feems to have drawn from them many of his own principles: He was a difciple of that school. About the same time he published a tract, which engaged fome attention in the controverfy concerning subscription; and he published new editions of his two principal works, with confi-

derable additions, and fome alterations.

Dr Law held the fee of Carlifle almost 19 years ; during which time he twice only omitted fpending the fummer months in his diocefe at the bishop's residence at Rofe Caftle; a fituation with which he was much pleafed. not only on account of the natural beauty of the place, but because it restored him to the country, in which he had fpent the best part of his life. In the year 1787 he paid this vifit in a state of great weakness and exhaultion; and died at Rofe about a month after his arrival there, on the 14th day of August, and in the 84th year of his age.

The life of the bishop of Carlisle was a life of incesfant reading and thought, almost entirely directed to metaphyfical and religious inquiries. Befides the works already mentioned, he published, in 1734 or 1735, a very ingenious Inquiry into the Ideas of Space, Time, &c. in which he combats the opinions of Dr Clarke.

Lawes

which his name and writings are principally distin- tion: guished, is "that Jesus Christ, at his second coming, will, by an act of his power, restore to life and confciousness the dead of the human species, who, by their own nature, and without this interpolition, would remain in the state of infensibility to which the death brought upon mankind by the fin of Adam had reduced them." He interpreted literally that faying of St Paul, I Cor. xv. 21. " As by man came death, " by man came also the refurrection of the dead." This opinion had no other effect upon his own mind than to increase his reverence for Christianity, and for its divine Founder. He retained it, as he did his other speculative opinions, without laying, as many are wont to do, an extravagant stress upon their importance. and without pretending to more certainty than the fubject allowed of. No man formed his own conclusions with more freedom, or treated those of others with greater candour and equity. He never quarrelled with any person for differing from him, or confidered that difference as a fufficient reason for questioning any man's fincerity, or judging meanly of his understanding. He was zealoufly attached to religious liberty, because he thought that it leads to truth; yet from his heart he loved peace. But he did not perceive any repugnancy in these two things. There was nothing in his elevation to his bithopric which he fpoke of with more pleasure, than its being a proof that decent free-

dom of inquiry was not difcouraged.

He was a man of great foftness of manners, and of the mildest and most tranquil disposition. His voice was never raifed above its ordinary pitch. His countenance feemed never to have been ruffled; it preferved the fame kind and composed aspect, truly indicating the calmness and benignity of his temper. He had an utter diflike of large and mixed companies. Next to his books, his chief fatisfaction was in the ferious converfation of a literary companion, or in the company of a few friends. In this fort of fociety he would open his mind with great unrefervedness, and with a peculiar turn and sprightliness of expression. His person was low, but well formed : his complexion fair and delicate. Except occasional interruptions by the gout, he had fort he greatest part of his life enjoyed good health; and when not confined by that distemper, was full of motion and activity. About nine years before his death, he was greatly enfeebled by a fevere attack of the gout in his stomach; and a short time after that, loft the use of one of his legs. Notwithstanding his fondness for exercise, he refigned himself to this change, not only without complaint, but without any fenfible diminution of his cheerfulness and good humour. His fault (for we are not writing a panegyric) was the general fault of retired and studious characters, too great a degree of inaction and facility in his public station. The modefly, or rather bashfulness of his nature, together with an extreme unwillingness to give pain, rendered him fometimes less firm and efficient in the administration of authority than was requisite. But it is the condition of human morality. There is an opposition between some virtues which feldom permits them to fubfift together in perfection.

The bishop was interred with due solemnity in his cathedral church, in which a handsome monument is Nº 179.

LAWBURROWS, in Scots law. See LAW. Part III. No clxxxiii. 16.

LAWENBURG, Duchy, a territory of Germany, in the circle of Lower Saxony, bounded by the duchy of Holstein on the north and west, by the duchy of Mecklenburg on the east, and by the duchy of Lunenburgh, from which it is separated by the river Elbe, on the west; being about 85 miles long, and 20 broad. The chief towns are Lawenburg, Mollen, Wittemburg, and Ratzeburg. It belongs to the elector of Honover.

LAWENBURG, a city of Germany in the circle of Lower Saxony, and capital of a duchy of the fame name. It is a fmall but populous town, fituated on the Elbe, under the brow of a very high hill, from whence there is a delightful prospect over the adjacent country. It has a castle on an eminence, and is convenient for trade. E. Long. 10. 51. N. Lat. 53. 36.

LAWENBURG, a town of Germany in Farther Pomerania, and the chief place of a territory of the fame name, belonging to the elector of Brandenburg.

LAWERS, an eminent engraver, who flourished about the middle of the 16th century. He was a native of Flanders, and probably fludied under Paul Pontius, whose style of engraving he frequently imitated. He possessed a considerable share of merit; but was by no means equal to that great mafter, either in the excellency of the handling of the graver, or knowledge of drawing. He engraved from feveral painters ; but his best works are from the pictures of Rubens.

LAWES (Henry), a celebrated mufician, and the Purcell of his time. He was a fervant to Charles I. in his public and private music, and set some of the works of almost every poet of eminence in that reign. The Comus of Milton, and feveral of the lyrics of Waller, were fet by him; and both these poets have done him honour in their verses. He composed a considerable number of pfalm-tunes in the Cantica Sacra, for three voices and an organ; and many more of his compositions are to be seen in a work called Select airs and dialogues; also in the Treasury of music, and the Musical companion. He died in 1662.

LAWES (William), was brother to the former, and a most capital musician. He made above 30 several forts of mufic for voices and instruments; nor was there any instrument then in use, but he composed to it as aptly as if he had fludied that alone. In the mufic school at Oxford are two large manuscript volumes

Lawlets of his works in fcore for various instruments. He was a commissary under general Gerard in the civil war, awrence. and, to the great regret of the king, was killed at the fiege of Chester in 1645.

LAWLESS COURT, a court faid to be held annually on King's Hill at Rochford in Effex, on the Wednesday morning after Michaelmas day at cockcrowing, where they whifper, and have no candle, nor any pen and ink, but only a coal. Perfons who owe fuit, or fervice, and do not appear, forfeit double

their rent every hour they are miffing. This fervile attendance, Cambden informs us, was imposed on the tenants for conspiring at the like un-feasonable hour to raise a commotion. The court belongs to the honour of Raleigh, and to the earl of

Warwick; and is called lawlefs, from its being held at an unlawful hour.

LAWINGEN, a town of Germany, in the circle of Suabia; formerly imperial, but now subject to the duke of Neuburg. Here the duke of Bavaria, in 1704, fortified his camp to defend his country against the British forces and their allies commanded by the duke of Marlborough, who forced their intrenchments. It is feated on the Danube, in E. Long. 10.

29. N. Lat. 38. 32.

LAWN, a spacious plain in a park, or adjoining to a noble feat. As to the dimensions of a lawn: In a large park, it should be as extensive as the ground will permit; and, if possible, it should never be less than 50 acres: but in gardens of a moderate extent, a lawn of 10 acres is sufficient; and in those of the largest fize, 15 acres. The best fituation for a lawn is in the front of the house: and here, if the house front the east, it will be extremely convenient; but the most desirable aspect for a lawn is that of the fouth-east. As to the figure of the lawn, some recommend an exact fquare, others an oblong fquare, fome an oval, and others a circular figure : but neither of these are to be regarded. It ought to be so contrived, as to fuit the ground; and there should be trees planted for shade on the boundaries of the lawn, fo the fides may be broken by irregular plantations of trees, which, if there are not fome good prospects beyond the lawn, should bound it on every fide, and be brought round pretty near to each end of the house. If in these plantations round the lawn, the trees are placed irregularly, fome breaking much forwarder on the lawn than others, and not crowded too close together, they will make a better appearance than any regular plantations can possibly do; and if there are variety of trees, properly disposed, they will have a good effect; but only those which make a fine appearance, and grow large, straight, and handsome, should be admitted here. The most proper trees for this purpofe, are the elm, oak, chefuut, and beech; and if there are fome clumps of ever-green trees intermixed with the others, they will add to the beauty of the whole, especially in the winter-feason; the best forts for this purpose are lord Weymouth's pine, and the filver and spruce firs.

Lawn, in manufactures, a fine fort of linen, remark-

able for being used in the sleeves of bishops.

LAWRENCE (St), the largest river in north America, proceeding from the lake Ontario, from which Vol. IX. Part. II.

is navigable as far as Quebec, which is above 400 Lawfonia. miles; but beyond Montreal it is fo full of shoals and rocks, that it will not admit large veffels without dan-

ger, unless the channel be very well known.

LAWSONIA, EGYPTIAN PRIVET: A genus of the monogynia order, belonging to the octandria class of plants; and in the natural method ranking with those of which the order is doubtful. The calyx is quadrifid; the petals four; the stamina four in pairs; the capsule is quadrilocular and polyspermous. There are two species, the inermis and spinosa, both natives of India. Some authors take the first to be the plant termed by the Arabians henna or alhenna; the pulverifed leaves of which are much used by the eastern nations for dying their nails yellow: but others, Dr Haffelquift in particular, attribute that effect to the leaves of the other species of Egyptian privet which bears prickly branches. It is probable, that neither fet of writers are mistaken, and that the shrub in question is a variety only of the thorny lawfonia, rendered mild

Alhenna grows naturally and is cultivated throughout India, as also in Egypt, Palestine, and Persia. In those countries, says Hasselquist, it slowers from May to August. The leaves being pulverised, are made with water into a paste, which the inhabitants of those countries bind on the nails of their hands and feet, keeping it on all night. The deep yellow colour that is thus obtained is confiderably permanent, not requiring to be renewed for feveral weeks. It would feem that this custom is very ancient in Egypt; the nails of some mummies being found dyed in this manner. The dried flowers of henna afford a fragrant fmell, which, it its affirmed, women with child cannot

LAWYER, fignifies a counfellor, or one that is learned or skilled in the law. See Counsellor, Bar-RISTER, and SERIEANT.

LAY, a kind of ancient poem among the French,

confifting of very fhort verses,

There were two forts of lays; the great, and the little. The first was a poem consisting of twelve couplets of verfes, of different measures. The other was a poem confifting of fixteen or twenty verses, divided into four couplets.

These lays were the lyric poetry of the old French poets, who were imitated by fome among the English. They were principally used on melancholy subjects, and faid to have been formed on the model of the trochaic veries of Le Greek and Latin tragedies.

Father Mourgues gives at an extraordinary inftance of one of these ancient lays, in his Treatise of French

Sur l'appuis du monde Que faut il qu'on fonde, D'espoir? Gette mer profonde, En debris feconde Fait voir Calme au matin, l'onde Et l'orage y gronde

Lar-Brothers, among the Romanists, those pious but illiterate persons, who devote themselves in some it runs a course of 700 miles to the Atlantic ocean. It convent to the service of the religious. They wear a different Lazuli.

LAYERS, in gardening, are tender shoots or twigs of trees, laid or buried in the ground, till, having flruck root, they are separated from the parent tree, and become diftinct plants .- The propagating trees by layers is done in the following manner: The branches of the trees are to be flit a little way, and laid under the mould for about half a foot; the ground should be first made very light, and after they are laid they should be gently watered. If they will not remain eafily in the polition they are put in, they must be pegged down with wooden hooks: the best season for doing this is, for ever-greens, toward the end of August, and, for other trees, in the beginning of February. If they are found to have taken root, they are to be cut off from the main plant the fucceeding winter, and planted out. If the branch is too high from the ground, a tub of earth is to be raifed to a proper height for it. Some pare off the rhind, and others twift the branch before they lay it, but this is not neceffary. The end of the layer should be about a foot out of the ground; and the branch may be either tied tight round with a wire, or cut upwards from a joint, or cut round for an inch or two at the place, and it is a good method to pierce feveral holes through it with an awl above the part tied with the wire.

LAYING THE LAND, in navigation, the state of motion which increases the distance from the coast, fo as to make it appear lower and fmaller, a circumstance which evidently arises from the intervening convexity of the furface of the fea. It is used in contra-diction to raising the land, which is produced by the opposite motion of approach towards it. See

LAND.

LAZAR-HOUSE, or LAZARETTO, a public building, in the nature of an hospital, to receive the poor, and those afflicted with contagious diftempers. In fome places, lazarettos are appointed for the performance of quarantine; in which case, those are obliged to be confined in them who are suspected to have come

from places infected with the plague.

LAYSTOFF, or Lowestoff, a town of Suffolk 117 miles from London, feems to hang over the fea; and its chief business is fishing for cod in the north sea, and for herring, mackarel, and sprats, at home. The church being three furlags off, there is a chapel in the place. Having been a part of the ancient demesnes of the crown, this town has a charter and a feal. by the former of which the inhabitants are exempted from ferving on juries. Here is a market on Wednefday, and two fairs in the year. Some take this to be the most eastern part of Britain.

LAZULI, or Lapis Lazuli, a species of zeolite belonging to the class of argillaceous earths. See CLAY, no 7. It is of a blue colour. That which is of a fine blue inclining to purple, has obtained the name of Oriental; but the pale blue is less esteemed. It is frequently variegated with yellow, and white shiming veins and speckles; which the common people solved in any of the mineral acids, it always turned

thing but marcafites. The lapis lazuli has the following properties: 1. It retains its blue colour for a long time in a calcining heat; but changes at last to a brown. 2. It melts easily in the fire to a white frothy flag; which puffs up greatly when exposed to the flame of a blow-pipe; but with a ftrong heat in a covered veffel, it becomes clear and folid, with blue clouds in it. 3. It does not ferment with acids; but, if boiled with oil of vitriol, it flowly diffolves, and lofes its blue colour. On adding a folution of fixed alkali, it precipitates a white earth, which being fcorified with borax, yields a filver coloured regulus, varying inbigness according to the different specimens of the flone. 4. By fcorification with lead, it yields filver, fometimes in the quantity of two ounces to a hundred weight of the stone. 5. Oil of vitriol discovers the presence of filver more certainly in lapis lazuli than spirit of nitre. 6. On adding spirit of sal ammoniac to any folution either of crude or calcined lapis lazuli, noblue colour is produced; a certain proof that it does not depend on copper; which is further confirmed by the fixity of the blue colour in the fire, and the colour of the flag or glafs. 7. It is fomewhat harder than the other kinds of zeolite, but does not approach to the hardness of quartz or other filiceous stones in general; for the purcit and finest lapis lazuli may be rubbed into a white powder by means of steel, though it takes a polish like marble. 8. When perfectly calcined, it is a little attracted by the loadstone; and when fcorified with lead, the flag becomes of a greenish colour, not like that produced by copper, but fuch as is always. produced by iron mixed with a calcareous fubstance. Mongez informs us, that fome of the parts of lapis

lazuli will firike fire with fleel. According to Cronftedt, it is feldom found pure; but generally full of veins of quartz, limestone, and marcasite : but for the experiments by which the above mentioned qualities, were determined, the purest pieces were picked; fuch as had been examined through a magnifying glass, and judged as free from heterogeneous mixture as possible. Our author expresses a wish that fuch as are in possesfion of any quantity of the stone would make farther experiments, in order to determine what substance it is. which produces the blue colour fo conftant in the fire. fince it cannot depend either on copper or iron; for though these metals, on certain occasions, give a blue colour, yet they never produce any other but what inflantly vanishes in the fire, and is destroyed by means of an alkali, "What is mentioned in feveral books (fays he) can by no means be objected here; fince in thefe processes the filver employed is mixed with copper and other fubstances which contain a volatile alka-Il, whereby the blue colour is produced."

In the year 1761 M. Margraaf published fome experiments on the lapis lazuli; in which he agrees in a great measure with Cronstedt. According to him, the lapis lazuli does not contain any copper; but he found in it a calcareous and gypfeous fubitance, though he took care to pick out the very pureft bits he could find. Engeftrom, however, is of opinion, that the calcareous fubstance is not effential to lapis lazuli; as Cronfiedt fays, that the lapis lazuli he tried did not ferment with acids. He farther mentions, that when dif-

Leachlade, them into a jelly. Some of his experiments also feem to indicate, that all kinds of lapis lazuli do not contain filver, though many of them do.

The lapis lazuli is found in many parts of the world; but that of Asia and Africa is much superior both in beauty and real value to the Bohemian and German kind, which is too often fold in its place.

LEACHLADE, a town of Gloucestershire, 12 miles east from Cirencester, 20 miles from Gloucester, and 60 from London. The river Thames waters it on the fouth and east fides, and divides it from Wiltshire and Berkshire. The Leach runs through the north fide of the parish. The Thames river is navigable for barges of 50 tons burden, but want of water one part of the year makes the navigation very uncertain. Here is a small market on Tuesday, and two fairs in the year. The church is a large handsome building, with double ailes, supported by two rows of fluted pillars.

LEAD, one of the imperfect metals, of a dull white colour inclining to blue, the least ductile, the least elastic, and the least sonorous, of the whole, possesses a confiderable degree of specific gravity, reaching from

11.3 to 11.479. It is found, 1. Native. Cronstedt and some other mineralogists have doubted whether native lead was ever found in the earth, but the matter is now decided by innumerable testimonies. It appears from the Philosophical Transactions for 1772, that some small pieces of native lead were found in the county of Monmouth in Wales. It is faid also to be found in the Vivarrais in France. Bomare mentions a curious specimen of native lead kept in the collection of the abbé Nolin at Paris, that had been found in the lead mines of Pompean, near Rennes in Brittany. It was very malleable, could be cut with a knife without crumbling, and eafily melted over the flame of a candle. It weighed about two pounds; was imbedded in an earthy lead ore of a reddish colour; and had a slaty vein that went through the middle of it.

2. Lead spar, is sometimes transparent, but generally opake, and crystallized in regular forms of a laminar or firiated texture. Lead ochre, or native cerus, is the same substance, but in a loose form, or indurated and shapeless. Sometimes it is found in a filky form. Both contain fome iron, calcareous earth, and clay; and both grow red or yellowish when heated. They effervesce with acids, and afford from 60 to 80 or 90 per cent. of lead. They are found in Brittany, Lorrain,

Germany, and England.

M. Sage, of the royal academy of Paris, pretended, that the white lead ore from Poulawen in the county of Bretagne in France, was mineralized by the marine acid: but his mistake was detected by the commisfioners of that academy. This ore, according to the fame academicians, is composed of ftriated cryftals, of a whitish pale red or grey colour. There is a lead ore of this kind sometimes grey and sometimes yellow, which is very heavy. Its ftructure is either lamellated or fibrous, and its laminæ can hardly be separated; but it is friable, and may be cut with a knife. Sometimes it is crystallized; and sometimes its fibres are extremely thin, femitransparent, and have a filky look. They effervesce with acids, decrepitate in the fire, and seem to lofe the aerial acid by which the lead is mineralifed.

The sparry lead ore has often a semitransparency like the sparry fluor; its crystals being generally terminated by hexahedral prifms, or cylindrical columns, firiated, and apparently composed of a great number of filaments. These sparry crystals are always found in the fame places with the galenas or fulphurated lead ores; and feem to be formed from their decomposition after the loss of their sulphur; so that it is not uncommon to find galenas which are beginning to pass into a flate of white lead. There is a black ore of lead, which may be supposed to be in an intermediate state betwixt the white lead ore and galena, as it feems to be a true white lead tinged by the hepatic vapours of the fulphur on its parting from the galena. There is also a green transparent lead, having a more or less yellowish cast. It frequently has no regular form, and appears like a kind of mofs. When this green ore is crystallized, it confists of hexahedral truncated prisms, terminated by fix-fided pyramids, either entire or truncated near the base. Professor Brunnich tells us, that the green and the black lead ores from Saxony, and the Hungarian blue ores, are prismatic. According to Kirwan and Mongez, the green lead ores are either crystallized in needles as in Brittany, or in a loose powder as in Saxony; but mostly adhering to and invefting quartz. They owe their green colour to iron, feldom containing any copper, and are very rare. Brunnich mentions a sapphire-coloured ore once found among fome white lead spar at Wendish Lemen. It was eafily melted by the blow-pipe. Natural red-lead or minium has been found in fome Siberian mines. It is found either crystallized, or in shapeless masses, or in powder, in which it agrees with the brown or yellow ores. Dr J. R. Forster brought some of this crystallized red lead ore from Russia. The crystals were cubical, and the colour feemed rather pale. The red Siberian ores are perfectly rhombic; those from Bohemia have a cubical or rhomboidal form. Sulphur and arfenic have been found in the red ones, but the others have not been sufficiently investigated. Most of them effervesce with acids.

3. Arsenical lead spar. Cronfledt fays that he tried an ore of this kind from an unknown place in Germany, and found that no metal could be melted from it by means of the blow-pipe as could be done by other spars; but by doing it in a crucible, that part of the arfenic which did not fly off was likewife reduced, and found in the form of grains dispersed, and forced into the lead. Another ore fimilar to this, and which likewife was not eafily reduced by means of the blow-pipe, always shot into polygonal, but chiefly hexagonal crystals, after being melted, having shining furfaces. Professor Brunnich observes, that these ores effervesce with acids, and contain 40 per cent. of lead.

4. The bley glanz. of the Germans contains lead mineralized with fulphur alone, and of this there are two or three varieties. At Villach in Austria there is faid to be found a potters lead-ore containing not the small-

est portion of filver

5. Lead mineralifed by the vitriolic acid, is generally in the form of a white mass, soluble in 18 times its quantity of water. Sometimes it is blackish, and crystallized in very long striæ, or in friable stalactites : this last variety effloresces in the air, and is converted

into a true vitriol of lead. According to Mr Kirwan, it does not effervefee nor is foluble in other acids, but may be reduced by laying it on a burning coal. It originates from the decomposition of sulphurated lead ores. Dr Withering informs us, that it is found in great quantity in the island of Anglesey; but united to iron, and not reducible by the blow-pipe or

6. Lead mineralized by the phosphoric acid, was lately discovered by Mr Gahn. It is of a greenish, yellow, or reddish colour, and does effervesce with acids. After folution in nitrous acid, the lead may be precipitated from this ore by the vitriolic acid. hundred grains of lead are produced from 137 of this precipitate washed and dried. The decanted liquor evaporated to dryness affords the phosphoric acid, from which the inflammable compound may be produced by distillation with charcoal. Seven ounces of this lead ore from the neighbourhood of Friburg, treated in the manner just mentioned, yielded by distillation 144 grains of phosphorus. A compound fimilar to this ore may be obtained by mixing pure pholphoric acid (that is, fuch as is combined with the volatile alkali, for the feffile alkali in the microcosmic falt hin-

ders the operation) with red lead.

7. Galena, or potters ore, in which the metal is mineralized by fulphurated filver. According to Mr Kirwan it is the most common of all the lead ores, of a bluish dark lead colour, formed of cubes of a moderate fize, or in grains of a cubic figure, whose corners have been cut off; its texture is lamellar, and its hardnels varying in different specimens. That which is formed into grains is supposed to be the richest in filver; but even this contains only about one or one and a half per cent. that is, about 12 or 18 ounces per quintal; and the poorest not above 60 grains. Ores that yield about half an ounce of filver per quintal are barely worth the extracting. Different specimens also vary in the quantity of sulphur they contain, from 15 to 25 per cent. and that which contains the leaft is in some degree malleable. The proportion of iron in this ore is very small, but the lead is from 60 to 85 per cent. M. Monnet afferts, that galena is infoluble in the nitrous acid; but Dr Watson has shown, that it is completely diffolved by the acid when diluted. The specific gravity of galena is from 7.000 to 7.780. It yields a yellow flag when melted.

M. Fourtroy diftinguishes several varieties of this tore. 1. Cubic galena, the cubes of which are of various fizes, and found either fingle or in groups; it is often found with the angles truncated, and is common at Freyberg. 2. In maffes, without any regular configuration; very common at St Maire. 3. With large facets. It does not compose regular crystals, but is entirely formed of large laminæ. 4. With small facets, appearing like mica, composed of white and very brilliant scales. It is called white filver ore, because it contains a confiderable quantity of that metal. 5. Small grained galena, fo called because it has a very close grain. It is likewife very rich in filver, and is found with the foregoing ore. No galena, excepting that of Carinthia, is known to be without filver; but it has been observed, that those which afford the most filver have the fmallest facets. 6. Galena crystallized like lead foar, in hexagonal prifms or cylindrical columns,

contains little filver, and feems to be merely fpathole lead, mineralized without having loft its form. Crystals of pure spathose lead entirely covered with a very fine galena, are fometimes found in the fame piece, together with others which are changed into galena throughout.

8. Antimonial lead-ore, in which the metal is mineralized by fulphur with filver and regulus of antimony. This is of the fame colour with galena, but its texture is different, being radiated, filamentous, or striated. When heated, it yields a white smoke; and it affords from 40 to 50 per cent. of lead, and from half an ounce to two ounces of filver per quintal.

9. Pyritous lead-ore, mineralized by fulphur with filver and a large proportion of iron. This is of a brown or yellowish colour; of an oblong or stalactitical form; friable; and of a lamellar, striated, or loofe texture; affording 18 or 20 per cent. of lead at most, which is obtained merely by melting it, the iron detaining the fulphur. It is only a mixture of galena

with the brown pyrites.

to. Lead mineralized by arfenic, was lately discovered in Siberia. It is of a pale colour externally, but internally of a deep red. It is for the most part crystallized in rhomboidal parallelopipeds, or irregular pyramids. Lehman fays, that it contains fulphur, arfenic, and about 34 per cent. of lead; and Mr Pallas fays. that it contains some filver also. It was found near Catherineburg in Siberia; and Lehman fays, that on being reduced to powder, it refembled the best carmine. A specimen examined by Mongez was of a yellowgreenish colour, and was found among quartz in the fame country, and contained fome arfenic. Both thefe, according to M. Magellan, may be eafily reduced by means of a blow-pipe.

11. Stony or fandy lead-ores, confift either of the calciform or the galena kind, intimately mixed and diffufed through stones and earth, chiefly of the calcareous or barytic genus. To this species Mongez refers the earthy lead ore, falfely called native mafficot, found in the lead mines of Pompean in Brittany, principally in folid pieces. These are either yellowish or grey :. they appear bright like glass when broken, and effervelce with acids; whence it appears that the ore contains fixed air. Sometimes it is mixed with clay.

12. The mine of Morngenstern at Freyberg has a peculiar variety of lead-ore containing filver, and which deferves to be noticed on account of its yellowish-brown colour, and likewise on account of its singular figure, which confifts of flender cylinders. Sometimes it is found in dentritical forms, like the knit cobalt.

Most of the ores of lead contain filver; and those kinds of galena which do not, are very scarce. In Hungary and Transylvania, the lead ore contains a quantity of gold as well as filver. Sometimes the potters ores are found so poor in filver, that it is not worth the expence of extracting it. These, when free from mixtures of the rock, are employed without any fusion to glaze earthen ware; and a confiderable tradeis carried on in the Mediterranean with fuch ores from the mines of Sardinia and France.

Lead, exposed to heat, melts long before it is ignited. By a ftrong heat it becomes volatile, and flies off in vapours. If fuffered to cool very flowly, and the melted portion be poured off from that which is be-

lar pyramids. When melted with the contact of air, it foon becomes covered with a grey dull pellicle, which by proper management is converted into minium, as explained under the article CHEMISTRY; and by this operation it becomes heavier by about ten pounds in the hundred, though it is faid that at Nuremberg it gains twice as much. By too much heat minium lofes its beautiful red colour, and assumes that of a pale yellow: by a heat still more violent, it melts into a transparent glass, fo fusible, that it penetrates the crucible and escapes, But if one part of fand be added to three parts of calx of lead, the fand melts, by the affiltance of the calx, into a beautiful amber-coloured glafs. With two parts of lead and one of fand, it refembles a topaz. A fimilar quantity of the calx of lead, added to common glass, does not alter its transparence, but gives it a greater degree of weight, and more especially a kind of unctuousness, which renders it capable of being cut and polished more easily without breaking. This glass is very proper for making achromatic lenses; but is subject to veins, and to have a gelatinous appearance, " The English (favs M. Fourcrov) call it flint glass; our workmen find great difficulty in felecting pieces of any confiderable magnitude, exempt from firize, in that which is imported from England." This great imperfection feems, in Macquer's opinion, to depend on the principles of the glass not being uniformly combined: for that purpose it is necessary that it should be kept in susion for a long time; but as the lead would by that means be diffipated, the flint glass would lose a part of its density and unctuoutness, which are its chief merit.

M. Magellan tells us, that it is the pureft calx of lead called minium, made immediately from the metal, and the most pure quartzous fand, with pure mineral alkali, or rather with good nitre, that produce, when properly melted, the best flint-glass. The greater the proportion of red-lead, the heavier is the glass, and of course its refraction the greater; an effential requifite for fucli glass as is employed for the lenses of achromatic telescopes. It must, however, be observed, that glass made with lead has the defect of being of unequal dentity, for want of a perfect mixture of all its parts; fo that it is extremely difficult to find pieces of a few inches diameter among hundred weights of this glass, that shall be quite free from filaments and ftriæ. By chance the late Mr Dollond procured a pot of pure flint glass, from which he made the admirable triple object lenses of three feet and a half focus, which have been fo much admired; but no fuch other glass has yet been found, though very confiderable premiums have been offered for the method of producing the best kind of glass for optical instruments.

All the calces of lead, especially minium, have a great attraction for fixed air. If therefore we should defire a calx of lead in perfect purity, it must be kept defended from the contact of air, or flightly calcined before it is used, in order to separate the fixed air it may have absorbed. When exposed to the air, it tarnishes in proportion to the dampness of the air, and contracts a white ruft, which is not a pure calx, but combined with the fixed air imbibed from the atmosphere. It is not altered by pure water; and there-

come folid, it is found to be crystallized in quadrangu- fore we must conclude, that the whitish crust with Lead. which the internal part of lead pipes through which water runs is usually covered, must be owing to the faline fubstances contained in the water.

"All the phenomena of the calcination of lead (fays M. Magellan), and of its reduction to the metallic state, show that it has the fmallest adhesion to phlogifton; as appears by the fimple action of fire, which feparates both, whilft their attraction is equally quick in its reduction to the metallic flate. A common wafer, which owes its colour to red-lead, by being burned in the flame of a candle, immediately exhibits pure globules or little drops of the metal. The readine's with which lead parts with its phlogiston is shown by the curious experiment lately performed at Paris by Doctor Luzuriagu pensioner of the court of Spain. He put four ounces of lead-flot wetted with water into a pint bottle filled with atmospheric air, and clofed with a stopple. Having shaken it several times. a black powder was produced, which foon turned white: on opening the bottle at the end of 24 hours. the air was found to have loft a fifth part of its bulk, and to have become phlogifticated. Dephlogifticated air was fill more reduced in bulk; but the contrary took place when inflammable air was employed."

Cauftic alkaline lixivia, boiled on lead, diffolve a fmall quantity of it, and corrode more. It has been observed, that plants do not thrive so well in leaden as

In Holland, and perhaps in other places, it has been cultomary to correct the most offensive expressed oils, as that of rape-feed and rancid oils of almonds or olives, by impregnating them with lead. This dangerous abuse may be discovered by mixing a little of that oil with a folution of orpiment made in limewater: for, on shaking them together, and suffering them to rest, the oil, if it has any faturnine tint, will appear of an orange red; but if pure, of a pale vellowish one. A similar abuse has also been practised. with acid wines, which diffolve as much of the lead as communicate a sweetish taste. This is discovered in a fimilar manner; and upon this principle is founded the liquor probatorius, or test-liquor. This liquor is nothing elfe than a folution of orpiment or liver of fulphur in lime-water. If a few drops of this folution be put in a glass of the suspected liquor, it will exhibit a precipitation like a dark coloured cloud. This is owing to the attachment of the lead to the fulphur in the orpiment. If lead, or its calces, in powder, be mixed with a folution of hepar fulphuris, a decomposition ensues, but the alkali is not thus deprived of its fulphur. Inflead of this, it is re-converted into vitriolated tartar; the lead feizes the phlogiston of the fulphur, and allows the vitriolic acid to unite with the alkali.

Lead unites with most other metals. It cannot. however, be united with iron: but if both are expofed to the fire in a proper vessel, the lead scorifies the iron by feizing on its phlogiston; after which it melts with the calx into a dark-coloured glass. This property which lead poffesfes, of reducing all the imperfeet metals to a glass, is the reason of its being used in the purification of gold and filver; neither of whichcan be touched by it, but remain pure in the bottom of the cupel. This process is the more complete by

that no earthen veffel or crucible can contain it when fused, of whatever materials the vessel be made. A mixture of raw and burned clay stands the action of lead for the greatest length of time; but at last this also gives way, and is corroded in the fides.

Litharge, a fort of refuse of lead, is employed in the composition of all the finer glasses called palles, which are defigned as imitations of precious stones. The addition of litharge renders them more folid and brilliant. The principal ingredients are the pureft of flint, purified alkali, borax, and litharge; the other additions, chiefly of metallic calces, are added, merely for the fake of tinging them with various colours.

Lead is employed in making of various veffels, as cifterns for water, large boilers for chemical and other purposes, &c. It is frequently mixed with tin by the pewterers; a practice which M. Fourcroy fets forth as very dangerous, and gives the following process for detecting it: " Diffolve two ounces of the fulpected metal in five ounces of a good pure nitrous acid. The calx of tin is to be washed with four pounds of distilled water, and dried, and the water evaporated by the heat of a water bath. By this evaporation nitre of lead is procured; which being calcined, the weight of the refidue shows the quantity of metal contained in the tin, allowing a few grains for the augmentation of weight arifing from calcination, as well as the other metallic fubstances, fuch as zinc and copper, which the tin under examination may contain. Bayan and Charlard by this method afcertained, that fine wrought tin or pewter contains about 10 pounds of lead in the 100; and that the common tin fold in France under that name, often contains 25 pounds in the fame quantity; an enormous dofe, sufficient to expose those who use vessels made of this composition to the greatest danger."

There are several methods used by pewterers to difcover the fineness of tin. This is done in some cases by fimple inspection, the judgment being affilted by the weight and noise produced in bending the metal. But the best method is by trying the specific gravity of the metal; which will discover a very small quantity of lead, the difference betwixt the two metals being fo

confiderable.

Lead, when taken into the human body, is productive of various diforders, particularly a dangerous kind of colic terminating in a palfy; and as all the common earthen ware is glazed with minium, the use of it cannot be supposed to be void of danger in all cases. Fountains, or vessels of lead which contain water, often communicate a noxious quality to it when fuffered to remain long full. Its vapour is dangerous to the workmen who melt it, and the fumes falling upon the grass render it poisonous to the cattle who eat it; the fifth who inhabit the waters near fmelting houses foon die, nor is it safe for any animal to drink of it. In cases of poisoning by lead, antimonial emetics are recommended. Navier prescribes liver of sulphur and hepatic waters. The internal use of lead is certainly dangerous, though it is often pre- emit inflammable air, and continues to do fo without not altogether fafe. Certain it is, that all workmen it is probable, that in this way also charcoal might be awho deal much in lead, are subject to the cholic a- entirely dispersed, provided we could find vessels capable

Lead, reason of the great efficacy of lead in dissolving earthy bove mentioned from the habitual contact of the me. Lead bodies. In this respect it is so powerful a flux, tal or its calces, even though they neither take it in-

ternally, nor are exposed to its fumes.

Black-LEAD (Plumbago), a genus of inflammable fubstances, frequently confounded with molybdana; the appearance of which is nearly the fame, though the qualities are very different. Black-lead, when pure, is extremely black; but when fresh cut, appears of a bluish white, and shining like lead. It is micaceous, and minutely fealy; eafily broken, and of a granular and dull appearance when broken. Its tract on paner is much darker than that of molybdæna, which has a fine filvery appearance; by which means they are eafily diftinguished from one another. Black-lead is too foft to firike fire with fleel: it is infoluble in acids: but in a very strong fire, when exposed to the air at the fame time, it is entirely volatile, leaving only a little iron and a fmall quantity of filiceous earth. It may be decomposed by deflagration with nitre; but the common fluxes are not capable of procuring its fusion. Its specific gravity is from 1.087 to 2.267. According to Scheele, this fubftance confifts of phlogiston combined with aerial acid: but M. Pelletier has shown. that when pure it neither produces fixed nor inflammable air; both which, when found, are entirely owing to the fubftances that are mixed with it. Mr Scheele fays, that one part of plumbago requires ten of nitre to decompose it, but charcoal only five. The conclufion drawn from hence, viz. that plumbago contains twice as much phlogiston as charcoal, however, is by no means just; for the phlogiston may be defended from the action of the nitre, by means we cannot poffibly know, in the one and not in the other. Dr. Prieftley's experiments on the diffipation of charcoal into inflammable air also show, that charcoal is little or nothing elfe than mere phlogiston, so that no substance whatever can contain more. From these experiments Mr Kirwan concludes, that 100 parts of plumbago contain 67 of phlogiston; because 100 grains of nitre contain 33 of real nitrous acid; all of which are decomposed when it receives as much phlogiston as is neceffary to convert it into nitrous acid, or a little more. But 33 grains of nitrous acid are converted into nitrous air by 67 grains of phlogiston; the remaining 33 parts may be water, or other volatile substance. By the experiments of Meffrs Gahn and Hielm, it appears, that 100 grains of plumbago, calcined in a muffle, loft 00 grains in weight; the remainder being a ferruginous earth, and the fulphureous fmell showed that it contained fome pyrites, both which were accidental to the black lead. M. Pelletier, however, as has already been hinted, affirms, that plumbago is volatilized in a ftrong fire, without producing any aerial vapour whatever; whence we must conclude, that the plumbago used by Scheele had not been quite pure. In close veffels, however, all agree, that black-lead fuftains a vehement fire for a long time without any fenfible diminu-tion of weight. This is fimilar to charcoal; which for a long time was supposed to be indestructible in close vessels: but Dr Priestley has shown, that in a very violent fire, in close veffels, charcoal begins to fcribed in medicine; and even the external use of it is any end of the process that he could perceive; whence

of fultaining fuch a long and whement heat. No experiments have been made with black-lead in this way, either with the folar heat in vacuo, or with a violent heat in an iron or other veffel capable of refifting a

long continued heat.

Cronftedt, when treating of this mineral, observes, that "Mr Pott examined it in close veffels, and Mr Quift in an open fire; from which difference in the mode of treatment, different notions had arise: because the black-lead, when treated in close vessels or when immediately put into a strong charcoal sie, is almost unalterable; but in a calcining heat, becomes almost entirely volatile. This is the case with several of the other mineral phlogistons; and from this we may in general learn, how necessary it is to examine the mineral bodies by many and different methods, and to endeavour to multiply the experiments more than has hitherto been done."

With regard to the reduction of metallic calces, which ought to be accomplished by this phlogific fubflance, M. Pelletier affirms, that it cannot be done unlefs the black-lead be mixed with fixed alkali, in the fame manner as when charcoal is employed in fuch circumflances. It cannot be combined with iron, as Bergman afferts; nor with any other metal, though it may be fimply intersperied betwixt its particles. M. Pelletier indeed owns, that there is a kind of plumbago found (wimming over the melted iron in large furnaces where iron-ores are finelted; but he thinks, that this mult have been naturally mixed with the mineral. It is also the only known plumbago of a very distinct lamellar form; as he observed in the pieces obtained

from the iron works at Vallancy in the French province of Berry.

Black-lead is found of different kinds; viz. 1. Of a fleel-grained and dull texture; naturally black, but when rubbed affording a dark lead colour. 2. Of a granulated and fealy appearance at the fame time. It is found in different countries, as Germany, France, Spain, the Cape of Good Hope, and America; but generally in small quantities, and of very different qualities. The best fort, however, and the fittest of all for making pencils, is that met with in the county of Cumberland in England. It is found in such plenty at a place called Borrowdale in this county, that hence not only the whole island of Britain, but the whole continent of Europe, may be faid to be supplied. " I have feen (fays M. Magellan) various specimens from different countries; but their coarfe texture and bad quality cannot bear any comparison with that of Borrowdale; though it fometimes, but feldom, contains pyritaceous particles of iron. It is but a few years ago, that this mine feemed to be almost exhaulted; but by digging some few yards through the strata underneath, according to the advice of an experienced miner, whose opinion had been long unattended to, a very thick and rich vein of the best black-lead has been discovered, to the great joy of the proprietors and advantage of the public."

The principal use of black lead is for making pencils for drawing; which have the advantage of marking paper very difficulty for a time, though their traces may afterwards be entirely rubbed out by soft bread or elastic gum. To, form the pencils, the lead is cut into thin parallclopipeds, and put into quadrangular

grooves cut in pieces of cypress wood; and a flit being glued over, they are worked into fmall cylinders like quills. A coarfer kind are made by working up the powder of black lead with fulphur, or fome mucilaginous fubstance; but these answer only for carpenters, or fome very coarse drawings. One part of plumbago with three of clay, and fome cows hair, makes an excellent coating for retorts, as it keeps its form even after the retorts have melted. The famous crucibles of Ypfen are formed of plumbago mixed with clay. Thefe are known in Britain by the name of Hessian crucibles; but a manufacture of the fame kind is now eftablished at Chelsea in the neighbourhood of London, where crucibles are manufactured nearly of the same quality with the foreign ones. The powder of blacklead ferves also to cover the straps for razors; and it is with it that the cast iron work, such as stoves, &c. receive a gloss on their surface. An application, however, perhaps as ufeful as any other, is that of black-lead to smooth the surfaces of wooden work which are subjected to much friction, as wooden ferews, packers preffes, &c.; neither greafy nor oily fubitances, nor foapy ointments, produce fuch a good effect upon them.

Milled LEAD. See CHEMISTRY, nº 1219.
Poison of LEAD. See Poison,

Sheet LEAD. See PLUMBERY.

LEAF, a part of a plant extended into length and breadth in fuch a manner as to have one fide diffinguishable from the other. This is Miller's definition. Linnaus denominates leaves "the organs of motion, or mufcles of the plant."—The leaves are not merely-ornamental to plants; they ferve very ufeful purpofes, and make part of the organs of vegetation.

The greater number of plants, particularly trees, are furnished with leaves: in multinooms, and shrubby horfe-tail, they are totally wanting. Ludwig defines leaves to be shrous and cellular processes of the plant, which are of various figures, but generally extended into a plain membranaceous or skinny substance. They are of a deeper green than the foot-stalks on which they stand, and are formed by the expansion of the vessels of the stalks, among which, in several leaves, the proper vessels are distinguished by the particular taste, colour, and smell, of the liquors contained with-

in them.

By the expansion of the vell-lis of the flalk, are produced feveral ramifications or branches, which, crofsing each other mutually, form a kind of net; the melhes or interflices of which are filled up with a tender cellular fubtlance, called the pulp, pith, or parenchyma. This pulpy fubtlance is frequently confumed, by certain finall infects, whill the membranous net, remaining untouched exhibits the genuine ikeleton of the leaf.

The net in queffion is covered externally with an epidermis or fearf-fkin, which appears to be a continuation of the fearf-fkin of the flalk, and perhaps of that of the flem. M Defauffure, a judicious naturalith, has attempted to prove, that this fearf fkin, like that of the petals, is a true bark, composed itself of an epidermis and cortical net; thee parts feem to be the organs of perfipration, which serve to diffipate: the superpositions indeed to the fuer-fluory sinces.

The cortical net is furnished, principally on the

absorbent vessels, destined to imbibe the humidity of the air. The upper furface, turned towards heaven, ferves as a defence to the lower, which looks downward; and this disposition is fo effential to the vegetable economy, that, if a branch is overturned in fuch a manner as to destroy the natural direction of the leaves, they will, of themselves, in a very short time, refume their former position; and that as often as the branch is thus overturned.

Leaves, then, are useful and necessary organs : trees perish when totally divested of them. In general, plants ftript of any of their leaves, cannot shoot vigoroufly : witness those which have undergone the depredations of infects; witness, likewise, the very common practife of stripping off some of the leaves from plants, when we would fuspend their growth, or diminish the number of their shoots. This method is fometimes observed with corn and the esculent graffes: and, in cold years, is practifed on fruit-trees and vines, to render the fruit riper and better coloured: but in this cafe it is proper to wait till the fruits have acquired their full bulk, as the leaves contribute greatly to their growth, but hinder, when too numerous, that exquifite rectifying of the juices, which is fo necessary to render them delicious and palatable.

When vegetation ceases, the organs of perspiration and infoiration become fuperfluous. Plants, therefore, are not always adorned with leaves: they produce new ones every year; and every year the greater part are totally diverted of them, and remain naked during the winter. See PLANT.

LEAF-Infect. See CIMEX.

LEAF, in clocks and watches, an appellation given to the notches of their pinions.

Gold-LEAF, usually fignifies fine gold beaten into plates of an exceeding thinnels, which are well known in the arts of gilding, &c. The preparation of gold-

leaf, according to Dr Lewis, is as follows. "The gold is melted in a black-lead crucible, with fome borax, in a wind furnace, called by the workmen a wind hole: as foon as it appears in perfect fusion, it is poured out into an iron ingot mould, fix or eight inches long, and three quarters of an inch wide, previoufly greafed, and heated, fo as to make the tallow run and smoke, but not to take slame. The bar of gold is made red-hot, to burn off the unctuous matter, and forged on an anvil into a long plate, which is further extended, by being passed repeatedly between polished steel rollers, till it becomes a ribbon as thin as paper. Formerly the whole of this extension was procured by means of the hammer, and fome of the French workmen are still faid to follow the fame practice: but the use of the flatting-mill both abridges the operation, and renders the plate of more uniform thickness. The ribbon is divided by compasses, and cut with sheers into equal pieces, which confequently are of equal weights: thefe are forged on an anvil till they are an inch fquare; and afterwards well nealed, to correct the rigidity which the metal has contracted in the hammering and flatting. Two ounces of gold, or 960 grains, the quantity which the workmen usually melt at a time, make 150 of these squares, whence each of them weighs fix grains and two-fifths; and as 902 grains of gold make a cubic inch, the

Gold-Leaf, furface of the leaf, with a great number of fuckers or thickness of the fquare plates is about the 766th part Gold-Leaf,

" In order to the further extension of these pieces into fine leaves, it is necessary to interpose some smooth body between them and the hammer, for foftening its blow, and defending them from the rudeness of its immediate action : as also to place between every two of the pieces fome proper intermedium, which, while it prevents their uniting together, or injuring one another, may fuffer them freely to extend. Both these ends are answered by certain animal membranes.

" The gold-beaters use three kinds of membranes :

for the outfide cover, common parchment made of sheep-skin; for interlaying with the gold, first the fmoothelt and closeft vellum, made of calf-skin; and afterwards the much finer skins of ox-gut, fiript off from the large straight gut slit open, curiously prepared on purpose for this use, and hence called goldbeater's fkin. The preparation of thefe laft is a diffinct business, practifed by only two or three persons in the kingdom, fome of the particulars of which I have not fatisfactorily learned. The general process is faid to confift, in applying one upon another, by the smooth fides, in a moist state, in which they readily cohere and unite infeparably; ftretching them on a frame, and carefully fcraping off the fat and rough matter, foas to leave only the fine exterior membrane of the gut: beating them between double leaves of paper, to force out what unctuofity may remain in them; moistening them once or twice with an infusion of warm spices : and laftly, drying and preffing them. It is faid, that fome calcined gypfum, or platter of Paris, is rubbed with a hare's foot both on the vellum and the ox gut fkins, which fills up fuch minute holes as may happen in them, and prevents the gold-leaf from flicking, as it would do to the fimple animal-membrane. It is observable, that, notwithstanding the vast extent to which the gold is beaten between thefe ikins, and the great tenuity of the skins themselves, yet they sustain continual repetitions of the process for several months, without extending or growing thinner. Our workmen find, that, after 70 or 80 repetitions, the skins, though they contract no haw, will no longer permit the gold to extend between them; but that they may be again rendered ac for use by impregnating them with the virtue which they have loft, and that even holes in them may be repaired by the dexterous application of fresh pieces of skin: a microscopical examination of some skins that had been long used plainly showed these repairs. The method of restoring their virtue is faid in the Encyclop die to be, by interlaying them with leaves of paper moistened with vinegar white-wine, beating them for a whole day, and afterwards rubbing them over as at first with plaster of Paris. The gold is faid to extend between them more eafily, after they have been used a little, than when they are new.

"The beating of the gold is performed on a fmooth block of black marble, weighing from 200 to 600 pounds, the heavier the better; about nine inches fquare on the upper furface, and fometimes lefs, fitted into the middle of a wooden frame, about two feet fquare, to as that the furface of the marble and the frame form one continuous plane. Three of the fides are furnished with a high ledge; and the front, which

L E A [745] L E A

gold-beater takes before him as an apron, for prefer-ving the fragments of gold that fall off. Three hammers are employed, all of them with two round and fomewhat convex faces, though commonly the workman uses only one of the faces: the first, called the cutch hammer, is about four inches in diameter, and weighs 15 or 16 pounds, and fometimes 20, though few workmen can manage those of this last fize : the fecond, called the shodering-hammer, weighs about 12 pounds, and is about the same diameter: the third, called the gold-hammer, or finishing-hammer, weighs 10 or II pounds, and is nearly of the fame width. The French use four hammers, differing both in fize and shape from those of our workmen: they have only one face, being in figure truncated cones. The first has very little convexity, is near five inches in diameter, and weighs 14 or 15 pounds: the second is more convex than the first, about an inch narrower, and scarcely half its weight: the third, still more convex, is only about two inches wide, and four or five pounds in weight: the fourth or finishing hammer is near as heavy as the first, but narrower by an inch, and the most convex of all. As these hammers differ so remarkably from ours, I thought proper to infert them, leaving the workmen to judge what advantage one fet

may have above the other.

"A hundred and fifty of the pieces of gold are interlaid with leaves of vellum, three or four inches square, one vellum leaf being placed between every two of the pieces, and about 20 more of the vellum leaves on the outfides; over thefe is drawn a parchment case, open at both ends, and over this another in a contrary direction, fo that the affemblage of gold and vellum leaves is kept tight and close on all fides. The whole is beaten with the heaviest hammer, and every now and then turned upfide down, till the gold is firetched to the extent of the vellum; the case being from time to time opened for discovering how the extension goes on, and the packet, at times, bent and rolled as it were between the hands, for procuring fufficient freedom to the gold, or, as the workmen fay, to make the gold work. The pieces, taken out from between the vellum leaves, are cut in four with a steel knife; and the 600 divisions, hence resulting, are interlaid, in the same manner, with pieces of the ox-gut skins five inches square. The beating being repeated with a lighter hammer till the golden plates have again acquired the extent of the skins, they are a second time divided in four: the inftrument used for this division is a piece of cane cut to an edge, the leaves being now fo light, that the moisture of the air or breath condensing on a metalline knife would occasion them to flick to it. These last divisions being so numerous, that the skins necessary for interposing between them would make the packet too thick to be beaten at once, they are parted into three parcels, which are beaten separately, with the smallest hammer, till they are stretched for the third time to the fize of the fkins: they are now found to be reduced to the greatest thinness they will admit of; and indeed many of them, before this period, break or fail. The French workmen, according to the minute detail of this process given in the Encyclopedie, repeat the division and the beating once more; but as the fquares of gold,

Vol. IX. Part. II.

old-Leaf. is open, has a leather flap fallened to it, which the taken for the first operation, have four times the areaGold-Leaf.

gold-beater takes before him as an apron, for prefervine the framents of wold that fall off. Three ham equal area is the same in both methods, viz. 15 from

a fquare inch. In the beating, however fimple the process appears to be, a good deal of address is requisite, for applying the hammers so as to extend the metal uniformly from the middle to the sides: one improper blow is apt not only to break the gold leaves,

but to cut the fkins.

"After the laft beating, the leaves are taken up by the end of a cane infirument, and, being blown flat on a leather-cuffion, are cut to a fize, one by one, with a fquare frame of cane made of a proper flarpnefs, or with a frame of wood edged with cane: they are then fitted into books of 25 leaves each, the paper of which is well fmoothed, and rubbed with red-bole to prevent their flicking to it. The French, for fizing the leaves, use only the cane-knife; cutting them first straight on one side, fitting them into the book by the straight fide, and then paring off the superfluous parts of the gold about the edges of the book. The fize of the French gold leaves is from somewhat less than three inches to three and three-eighths.

"The process of gold-beating is confiderably influenced by the weather. In wet weather, the fkins grow fomewhat damp, and in this flate make the extension of the gold more tedious: the French are said to dry and prefs them at every time of using; with care not to overdry them, which would render them unfit for farther fervice. Our workmen complain more of frost, which appears to affect the metalline leaves themselves: in frost, a gold-leaf cannot easily be blown flat, but breaks, wrinkles, or runs together.

" Gold-leaf ought to be prepared from the finest gold; as the admixture of other metals, though in too fmall a proportion to fenfibly affect the colour of the leaf, would dispose it to lose of its beauty in the air. And indeed there is little temptation to the workman to use any other; the greater hardness of alloyed gold occasioning as much to be lost in point of time and labour, and in the greater number of leaves that break, as can be gained by any quantity of alloy that would not be at once discoverable by the eye. All metals render gold harder and more difficult of extension: even filver, which in this respect feems to alter its quality less than any other metal, produces with gold a mixture fenfibly harder than either of them feparately, and this hardness is in no art more felt than in the gold-beater's. The French are faid to prepare what is called the green gold-leaf, from a composition of one part of copper and two of filver with eighty of gold. But this is probably a miftake: for such an admixture gives no greenness to gold: and I have been informed by our workmen, that this kind of leaf is made from the fame fine gold as the highest gold-coloured fort, the greenish hue being only a superficial teint induced upon the gold in some part of the process: this greenish leaf is little otherwise used than for the gilding of certain books.

at But though the gold beater cannot advantageously diminish the quantity of gold in the leaf by the admixture of any other substance with the gold, yet means have been contrived, for some particular purposes, of faving the precious metal, by producing a g B kield

Legue. kind of leaf called party-gold, whose basis is silver, and which has only a superficial coat of gold upon one doe: a thick leaf of silver and a thinner one of gold, laid state on one another, heated and preficed together, unite and cohere; and being then beaten into sine leaves, as in the foregoing process, the gold, though its quantity is only about one-fourth of that of the filver, continues every where to cover it, the extension of the former keeping pace with that of the latter.

LEAGUE, a measure of length, containing more or fewer geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land-measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or three English miles. The French league fometimes contains the fame measure, and in some parts of France it confifts of 3500 paces : the mean or common league confifts of 2400 paces, and the little league of 2000. The Spanish leagues are larger than the French, 17 Spanish leagues making a degree, or 20 French leagues, or 604 English flatute miles. The Dutch and German leagues contain each four geographical miles. The Perfian leagues are pretty near of the same extent with the Spanish; that is, they are equal to four Italian miles: which is pretty near to what Herodotus calls the length of the Persian parasang, which contained 30 stadia, eight whereof, according to Strabo, make a mile. The word comes from leuca, or leuga, an ancient Gaulish word for an itinerary measure, and retained in that fense by the Romans. Some derive the word leuca from himself, " white;" as the Gauls, in imitation of the Romans, marked the spaces and distances of their roads with white stones.

LEAGUE also denotes an alliance or confederacy between princes and flates for their mutual aid, either in attacking some common enemy, or in defending themselves. The word comes from liga, which in the corrupt Latin was used for a confederacy 2 Sua quis cum

alio ligatur.

Leagues, among the Greeks, were of three forts: I. Exoven, Duvenxn, or Eignen, whereby both parties were obliged to ceafe from hostilities, without even molesting the allies of each other ; 2. Exima xia, whereby they engaged to lend affiftance to each other in case of invalion; and, 3. YUMMA XIA, whereby they engaged to have the same friends and enemies, and to affift each other upon all occasions. All these leagues were confirmed with oaths, and imprecations, and facrifices. The victims most generally used were a boar, ram, or goat, fometimes all three; and fometimes bulls and lambs. They cut out the testicles of the animal, and flood upon them while they swore; and some of the hair of the victim was distributed to all present. Then they cut the animal's throat, which was called opxia TEMPER, in Latin, ferire fadus .- This done, they repeated their oaths and imprecations, calling the gods to witness the honesty of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union: while this was pouring out, they prayed that the blood of him who should break the treaty might be poured out in like manner. Upon these occasions no part of the victim was eaten. Still further to increase the folemnity of this obligation, the league was engraven upon brafs,

fixed up in places of public concourfe, and fometimes League read at the foleran games. Some exchanged certain Lake Style 28.4 or telefore upon the occasion, and frequently fent embalfadors, on fome appointed day, to keep them in mind of their engagements to each other.

The ceremonies of the Romans in making leagues were performed by the Feciales. See FECIALES.

Leagues of the Grifons, are a part of Switzerland, confifting of three subdivisions, viz. the upper league, the league of the house of God, and the league of the ten jurisdictions. See the article Grisons.

The League, by way of eminence, denotes that famous one on foot in France, from the year 1576 to 1593. Its intent was to prevent the fucceffion of Henry IV. who was of the reformed religion, to the crown; and it ended with his abjuration of that faith

The kaguers, or confederates, were of three kinds. The zeolous loaguers aimed at the utter dell'urdion not only of the Huguenots, but allo of the ministry. The Spanife leaguers had principally in view the transferring the crown of France to the king of Spain, or the infanta his daughter. The moderate leaguers aimed only at the extirpation of Calvinisim, without any altera-

tion of the government.

LEAK, at fea, is a hole in the ship, through which the water comes in. A ship is said to spring a leak when the begins to leak or to let in the water. The manner of stopping a leak is to put into it a plug wrapped in oakum and well tarred, or in a tawrpawling clout, which keeps out the water, or nailing a piece of sheet lead on the place. Seamen fometimes stop a leak by thrusling a piece of salt beef into it. The sea-water, says Mr Boyle, being fresher than the brine imbibed by the beef, penetrates into its body, and causes it to swell so as to bear strongly against the edges of the broken plank, and thereby ftops the influx of the water. - A ready way to find a leak in a ship is to apply the narrower end of a speaking trumpet to the ear, and the other to the fide of the ship where the leak is supposed to be; then the noise of the water iffuing in at the leak will be heard distinctly, whereby it may be discovered.

LEAKAGE, the state of a vessel that leaks, or lets

water or other liquid ooze in or out.

LEAKAGE, in commerce, is an allowance of 12 per cent. in the cultoms, allowed to importers of wines for the wafte or damage it is supposed to have received in the passage: an allowance of two barrels in 22 is also made to the brewers of sale and beer by the excise-

LEAKE (Richard), mafter-gunner of England, was born at Harwich in 1629, and was bred to the fea. At the refloration, he was made mafter-gunner of the Princels, a frigate of 50 guns; and in the first Dutch war ditinguished himself by his foil and bravery in two extraordinary actions; one against 15 fail of Dutch men of war; and another in 1667 against two Danes in the Baltic, in which the commanding officers of the Princels being killed or desperately wounded, the command, according to the rules of war at that time, sell to the gunner. In 1669, he was promoted to be gunner of the Royal Princel, a fish-rate man of war. He was engaged, with his two sons Henry and John, in the battle against Van Tromp, in 1673; when the Royal Prince lad all her mads shot away, when the Royal Prince lad all her mads shot away.

nes

near 400 of her men killed and disabled, and most of her upper tier of guns difmounted. As she lay thus like a wreck, a great Dutch man of war came down upon her with two fire-ships, either to burn or carry her off; and Captain Rooke, afterwards Sir George, thinking it impossible to defend her, ordered the men to fave their lives, and the colours to be flruck. Mr Leake hearing this, ordered the lieutenant off the quarter deck, and took the command upon himself, faying, "The Royal Prince shall never be given up to the enemy while I am alive to defend her." The undaunted fpirit of the brave gunner inspired the small refidue of the ship's company with resolution : they returned with alacrity to the fight, and under the direction of this valiant gunner and his two fons funk both the fire-ships, and obliged the man of war to sheer off: and having thus faved the Royal Prince, he brought her into Chatham. But Mr Leake's joy in obtaining this victory was damped by the lofs of Henry, his eldest son, who was killed near him. Soon after, Mr Leake was preferred to the command of a yacht, and also made gunner of Whitehall. In 1677, he obtained a grant for life of the office of mafter-gunner of England, and store-keeper of the ordnance at Woolwich. By these posts he had full scope for his genius. He accordingly, among other things, invented the cushee-piece; and contrived to fire a mortar by the blast of a piece, which has been used ever since. He was also the principal contriver of what the French call infernals, used at the bombardment at St Malo's in 1603. Mr Leake had a furprifing genius for all inventions of this kind; and had frequent trials of skill with French and Dutch gunners and engineers in Woolwich warren, at which king Charles II. and the duke of York were often present, and he never failed to excel all his competitors: nor was he lefs skilled in the art of making compositions for fireworks; of which he likewife made frequent trials with equal fuc-

LEAKE (Sir John), an English admiral, distinguished by his bravery and fuccefs, was born in 1656, and was taught mathematics and gunnery by Mr Richard Leake his father, who was master-gunner of England. Entering early into the navy, he diftinguished himself under his father in 1673, in the memorable engagement between Sir Edward Spragg and Van Tromp, when but 16 years of age; and being afterwards made captain, he fignalized himfelf, among other occasions, by executing the desperate attempt of convoying some victualers into Londonderry, which obliged the enemy to raise the siege; and at the famous battle of La Hogue. In 1702, being made commodore of a fquadron, he destroyed the French trade and settlements at Newfoundland, and restored the English to the possession of the whole island. On his return he was created rear-admiral; foon after, he was made vice-admiral of the blue, and was afterwards knighted. He was engaged with admiral Rook in taking Gibraltar: foon after which, he particularly diflinguished himself in the general engagement off Malaga; when commanding the leading fquadron of the van, confifting only of fix ships, he drove that of the enemy, confifting of 13, out of the line of battle, fo difabled that they never returned to the fight. In 1705,

he relieved Gibraltar, which the French had belieged Leake. by fea, and the Spaniards by land, fo feafonably, that ' the enemy was to have attacked the town that very night in feveral places, and would undoubtedly have made themselves masters of it. Five hundred Spaniards had. by the help of rope-ladders, climbed up the rocks by a way that was thought inaccessible. At the same time they had got a great number of boats to land 3000 men at the New Mole, who, by making a vigorous affault on the fide next the fea, were to draw the garrifon to oppose that attack, while the 500 concealed men rushed into the town. These being the next day drawn by hunger out of their ambuscade, were discovered; on which Sir John affifting the gartifon with failors and marines, they were attacked with fuch vigour, that, though they had taken an oath not to furrender to the English, 190 common soldiers and 30 officers took quarter: 200 were killed on the fpot; and the reit. who endeavoured to make their escape, fell headlong down the rock. He was foon after made vice-admiral of the white, and then twice relieved that fortrefs. The last time, he attacked five skips of the French fleet coming out of the bay, of whom two were taken, and two run ashore and were destroyed: baron Pointi died foon after, of the wounds he received in the battle; and in a few days the enemy raifed the fiege. In the year 1705, Sir John was engaged in the reduction of Barcelona; and the next year relieved that city, when it was reduced to the last extremity, and obliged king Philip to raife the fiege. Soon after he took the city of Carthagena; from whence proceeding to Alicant and Joyce, both thefe submitted to him; and he concluded the exploits of that year with the reduction of the city and island of Majorca. Upon his return home, prince George of Denmark made him a prefent of a ring valued at 400 l. and he had the honour of receiving 1000 l. from the queen as a reward for his fervices. Upon the unhappy death of Sir Cloudefly Shovel, in 1707, he was made admiral of the white, and commander in chief of her majefty's fleet; and the next year, furprifing a convoy of the enemy's corn, he fent it to Barcelona, and thus faved both that city and the confederate army from the danger of famine: foon after, convoying the new queen of Spain to king Charles her confort, her majesty made him a prefent of a diamond ring of 500 pounds value. He then proceeded to the island of Sardinia, which he reduced to the obedience of king Charles; and foon after affifted the lord Stanhope in the conquest of Minorca. Then returning home, he was appointed one of the council to the lord high admiral; and in 1709, was made rear admiral of Great Britain. He was feveral times chosen member of parliament for Rochefter; and in 1712 conducted the English forces to take poffession of Dunkirk. But upon the accession of king George I. he was superfeded, and allowed a pension of 600 l. a-year. After this he lived privately till his death, which happened at his house in Greenwich in 1720.

LEAKE (Stephen Martin, Efg.) fon of Captain Martin, went through different ranks in the heralds office till he came to be garter. He was the first perfon who wrote professedly on our English coins, two editions of his " Historical Account" of which were Leap.

Leander published by him with plates, under the title of Nummi Britannici Historia, London, 1726, 8vo; the fecond, much improved, London, 1745, 8vo. He printed, in 1750, "The Life of Sir John Leake, knight, admiral of the fleet," &c. to whom he was Grecians called it AAMA, and performed it with weights indebted for a confiderable effate; which the Admiral devised to trustees for the use of his fon for life; and upon his death to Captain Martin (who married Lady ent figures, but generally oval and made with holes Leake's fifter) and his heirs: By which means it came or covered with thongs, through which the contendto the Captain's fon; who, in gratitude to the memory of Sir John Leake, wrote an accurate account of his life, of which only 50 copies were printed. In and fartheft. The place from whence they jumped 1766, he printed also 50 copies of "The Statutes of was called Balne, and that to which they leaped, the Order of the Garter," 4to. He died in 1773; and was buried in his chancel in the parish church of Thorp in Effex, of which manor he was lord.

LEANDER, in poetic history, a young man of Abydos in Afia. He used to swim over the Hellefpont by night to vifit Hero his mistress, who fet forth a light to guide him: but in a tempestuous winter-night he was drowned; upon which Hero feeing him dead on the shore, cast herself headlong from the

tower, and died also. See HERO.

LEAO, in natural history, a mineral substance approaching to the nature of the lapis lazuli, found in the East Indics, and of great use in the Chinese porcelain manufactures, being the finest blue they are possessed of. This stone is found in the strata of pitcoal, or in those of a yellowish or reddish earth in the neighbourhood of the veins of coal. There are often found pieces of it lying on the furface of the ground, and these are a fure indication that more will be found on dipping. It is generally found in oblong pieces of the fize of a finger, not round, but flat. Some of this is very fine, and fome coarfe and of a bad colour. The latter is very common; but the fine fort is fcarce, and greatly valued. It is not easy to diffinguish them at fight, but they are found by experiment; and the trying one piece is generally fufficient for judging of the whole mine, for all that is found in the same place is usually of the same fort.

The manner of preparing it for use is this: They first wash it very clean, to separate it from the earth or any other foulness it may have: they then lay it at the bottom of their baking furnaces; and when it has been thus calcined for three or four hours, it is taken out, and powdered very fine in large mortars of porcelain, with stone pettles faced with iron. When the powder is perfectly fine, they pour in boiling water, and grind that with the rest, and when it is thoroughly incorporated, they add more, and finally pour it off after some time settling. The remainder at the bottom of the mortar, which is the coarfer part, they grind again with more water; and fo on till they have made the whole fine, excepting a little dirt or grit. When this is done, all the liquors are mixed together, and well stirred. They are suffered to fland two or three minutes after this, and then poured off with the powder remaining in them: this is fuffered to fubfide gradually, and is the fine blue used in their best works, our common smalt serving for the blue of all the common china ware.

LEAP, in music, is when the fong does not proceed by conjoint degrees, as when between each note a feoffment. there is an interval of a third, a fourth, fifth, &c.

LEAP- Year. See YEAR, and CHRONOLOGY, n° 24. Leaping Lovers-LEAP. See LEUCATA.

LEAPING, or VAULTING, was an exercise much used both amongst the Greeks and Romans. The upon their heads and shoulders. Sometimes they carried the weights in their hands, which were of differers put their fingers. These weights were called Axinpec. The contest was who could leap the highest εσχαμμενα, because the ground was there dug up. This exercise was performed in the same manner by the Romans.

LEAR, the name of a British king faid in old chronicles to have succeeded his father Bladud, about A. M. 3160. The flory of this king and his three daughters, is well known from Shakespeare's excellent

tragedy founded on it.

LEASE, from the French laifer, demittere, " to let," in law, a demife, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent referved.

A leafe is either written, called an indenture, deedpoll, or leafe in writing; or by word of mouth, called

leafe parole.

All effates, interests of freehold, or terms for years in lands, &c. not put in writing and figned by the parties, fhall have no greater effect than as estates at will; unlefs it be of leafes not exceeding three years from the making; wherein the rent referved shall be two-thirds of the value of the things demifed. Leafes exceeding three years must be made in writing; and if the fubstance of a leafe be put in writing, and figned by the parties, though it be not fealed, it shall have the effect of a leafe for years, &c.

An affignment differs from a leafe only in this; that by a lease one grants an interest less than his own, referving to himfelf a revertion; in affiguments he parts with the whole property, and the affignce flands to all intents and purpofes in the place of the affiguor.

LEASE, in Scots law. See TACK.

LEASE and Release, a species of conveyance used in the English law, first invented by Serjeant Moore, foon after the statute of uses, and now the most common of any, and therefore not to be shaken; though very great lawyers (as particularly Mr Noy) have formerly doubted its validity. It is thus contrived. A leafe, or rather bargain and fale, upon fome pecuniary confideration, for one year, is made by the tenant of the freehold to the leffee or bargainee. Now this, without any inrolment, makes the bargainor stand feifed to the use of the bargainee, and vests in the bargainee the use of the term for a year; and then the flatute immediately annexes the possession. He therefore, being thus in possession, is capable of receiving a release of the freehold and reversion, which must be made to a tenant in possession: and accordingly, the next day, a release is granted to him. This is held to supply the place of livery of seisin; and so a conveyance by leafe and releafe is faid to amount to

LEASH, among sportsmen, denotes three crea-

Leafing, tures of any kind; but chiefly gre-hounds, foxes, bucks, and hares.

The term leash also fignifies a line to hold in a hunting dog; and a small long thong of leather, by which a falconer holds his hawk.

LEASING MAKING, in Scots law, the uttering of words tending to excite discord between the king and his people; also called verbal fedition

LEATHER, the skin of feveral forts of heads dreffed and prepared for the ufe of various manufacturers, whose business it is to make them up.

Dyeing of LEATHER, Skins, &c. Blue is given by fleeping the fubject a day in urine and indigo, then boiling it with alum; or it may be given by tempering the indigo with red-wine, and washing the skins therewith. Red is given by washing the skins, and laying them two hours in galls, then wringing them out, dipping them in a liquor made with ligustrum, alum, and verdigreafe in water; and laftly, in a dye made of brazil wood, boiled with ley. Purple is given by wetting the skins with a folution of roche alum in warm water; and, when dry again, rubbing them with the hand with a decoction of log wood in colder. Green is given by fmearing the skin with fap-green and alum-water boiled. Dark green is also given with fteel-filings and fal armoniac fteeped in urine till foft, then fmeared over the skin; which is to be dried in the shade. Sky-colour is given with indigo steeped in boiling water, and the next morning warmed and fmeared over the fkin. Yellow, by fmearing the fkin over with aloes and linfeed-oil diffolved and firained; or by infufing it in weld. Orange-colour is given by fmearing with fuffic berries boiled in alum-water; or, for a deep orange, with turmeric.

Processes for Dyeing LEATHER Red and Yellow as practifed in Turkey, with directions for Preparing and Tanning the Skins; as communicated by Mr Philippo, a native of Armenia, who received from the Society for the Encouragement of Aris, &c. one hundred pounds, and alfo the gold medal of the Society, as a reward for discover-

ing this secret.

1. First Preparation of the Skins, both for Red and Yellow Leather, by dreffing them in Lime. Let the ikins, dried with the hair on, be first laid to foak in clean water for three days; let them then be broken over the flesh-fide, put into fresh water for two days longer, and afterwards hung up to drain half an hour. Let them now be broken on the flesh-fide, limed in cold lime on the fame fide, and doubled together with the grain fide outward. In this state they must be hung up within doors over a frame for five or fix days, till the hair be loofe; which must then be taken off, and the skins returned into the lime-pit for about three weeks. Take them out, and let them be well worked flesh and grain, every fixth or feventh day during that time; after which, let them be washed ten times in clear water, changing the water at each washing. They are next to be prepared in drench, as below mentioned.

2. Second Preparation of the Skins for both the Red and Yellow Dyes by drenching. After squeezing the water out of the skins, put them into a mixture of bran and water, warm as new milk, in the following proportions; viz. about three pounds of bran for five ikins, and water fufficient to make the mixture mode- Leather. rately fluid, which will be about a gallon to each pound of bran. In this drench let the skins lie three days : at the end of which time they must be well worked, and afterwards returned into the drench two days longer. They must then be taken out and rubbed between the hands; the water fqueezed from them, and the bran feraped off clear from both fides of the skins. After this they must be again washed ten times in clear water, and the water fqueezed out of them.

Thus far the preparatory process of all the skins. whether intended to be dyed red or yellow, is the fame : but afterwards those which are to be dyed red, must

be treated as follows.

3. Preparation in Honey and Bran of the Skins that are to be dyed Red. Mix one pound of honey with three pints of luke warm water, and ftir them together till the honey is dissolved. Then add two double handfuls of bran; and taking four skins (for which the above quantity of the mixture will be fufficient) work them well in it one after another. Afterwards fold upeach skin separately into a round form, with the fleshfide inwards; and lay them in an earthen pan, or other proper veffel; if in the fummer, by the tide of each other; but in the winter, on the top of each other. Place the vessel in a sloping position, fo that such part of the fluid as may spontaneously drain from the skins, may pass from them. An acid fermentation will then rife in the liquor, and the skins will fwell considerably. In this flate they must continue for feven or eight days; but the moisture that drains from them must be poured off, once or twice a day, as occasion may require. After this a further preparation in falt is neceffary; and which must be performed in the following manner.

4. Preparation in Salt, of the Skins to be dyed Red. After the skins have been sermented in the honey and bran, as above mentioned, let them be taken out of that mixture on the eighth or ninth day, and well rubbed with dry common fea-falt, in the proportion of about half a pound to each fkin; the falt must be well rubbed and worked with them. This will make them contract again, and part with a further confiderable quantity of moilture; which must be squeezed out by drawing each skin feparately through the hands. They must next be scraped clean on both fides from the bran. fuperfluous falt, and moisture that may adhere to them. After which, dry falt must be strewed over the grainfide, and well rubbed in with the hand. They are then to be doubled with the flesh-fide outwards, lengthwife from neck to tail, and a little more dry falt must be thinly flrewed over the flesh-side, and rubbed in: for the two last operations, about a pound and a half of falt will be fufficient for each skin. They must then be put, thus folded on each other, between two clean boards, placed floping, breadthwife; and a heavy weight laid on the upper board, in order gradually to press out what moisture they will thus part with. In this state of pressure, they must be continued two days or longer, till it is convenient to dye them, for which they will then be duly prepared.

5. Preparation of the Red Dye, in a proper proportion for four skins. Put eight gallons of water into a copper,

6. Tanning the Red Skins. Powder four ounces of the best white galls in a marble mortar, sifting it thro' a fine fieve. Mix the powder with about three quarts of water, and work the skins well in this mixture for half an hour or more, folding up the skins four-fold. Let them lie in this tan for 24 hours; when they must be worked again as before; then taken out, scraped clean on both fides from the first galls, and put into a like quantity of fresh galls and water. In this fresh mixture they must be again well worked for three quarters of an hour; then folded up as before, and left in the fresh tan for three days. On the fourth day they must be taken out, washed clean from the galls in feven or eight fresh quantities of water, and then hung

up to dry. 7. Manner of Dreffing the Skins after they are tanned. When the skins have been treated as above, and are very near dry, they should be scraped with the proper instrument or scraper on the flesh-side, to reduce them to a proper degree of thickness. They are then to be laid on a smooth board, and glazed by rubbing them with a smooth glass. After which they must be oiled, by rubbing them with olive-oil, by means of a linen rag, in the proportion of one ounce and a half of oil for four fkins: they are then to be grained on a graining-board, lengthwise, breadthwise, and cornerwise,

or from corner to corner. 8. Preparations with Galls, for the Skins to be dyed

Tellow. After the four skins are taken out of the Leather. drench of bran, and clean washed as before directed in the fecond article, they must be very well worked, half an hour or more, in a mixture of a pound and an half of the best white galls, finely powdered, with two quarts of clean water. The skins are then to be separately doubled lengthwife, rolled up with the flesh-fide outwards, laid in the mixture, and close pressed down on each other, in which flate they must continue two whole days. On the third day let them be again worked in the tan; and afterwards fcraped clean from the galls, with an ivory or brass inftrument (for no iron must touch them). They must then be put into a fresh tan, made of two pounds of galls finely powdered, with about three quarts of water, and well worked therein 15 times. After this they must be doubled, rolled up as before, and laid in the fecond tan for three days. On the third day a quarter of a pound of white feafalt must be worked into each skin; and the skins doubled up as before, and returned into the tan, till the day following, when they are to be taken out, and well washed fix times in cold water, and four times in water lukewarm. The water must be then well squcezed out, by laving the skins under pressure, for about half an hour, between two boards, with a weight of about 200 or 300 pounds laid upon the uppermost board, when they will be ready for the dye.

9. Preparation of the Yellow Dye, in the proper proportion for four Skins. Mix fix ounces of caffiari gehira (B), or dgehira, or the berries of the eaftern rhamnus, with the fame quantity of alum; and pound them together till they be fine, in a marble or brafs mortar, with a brass peftle. Then dividing the materials, thus powdered, into three equal parts of four ounces each, put one of those three parts into about a pint and a half of water, in a china or earthen veffel, and ftir the mixture together. Let the fluid ftand to cool, till it will not feald the hand. Then fpreading one of the skins flat on a table, in a warm room, with the grain-fide uppermoft, pour a fourth part of the tinging liquor, prepared as above directed, over the upper or grain-fide, spreading it equally over the skin with the hand, and rubbing it well in. Afterwards do the like with the other three skins, for which the mixture first made will be fufficient.

This operation must be repeated twice more on each skin separately, with the remaining eight ounces of the powder of the berries, and alum, with the above mentioned due proportions of hot water, put to them as

before directed.

The

⁽A) Shenan is a drug much used by dyers in the East; and may easily be procured at any of the ports of Syria and Africa, in the Levant. It is the Eastern jointed kali, called by botanists falicornia; and grows in great plenty in those and other parts of the East. There is a lesser species of the falicornia on our coast, which, from its great affinity with the shenan, might be presumed to have the same qualities. On some trials, however, it has not appeared to answer the intention of the shenan; but it will not be prudent to pursue the examination of this further, as some unknown circumstances in the collecting or using the English salicornia might occasion the miscarriage. But be this as it may, the Eastern shenan may, at all events, be easily procured in any quantity, at a very trifling expence, by any of the captains of Turkey ships, at Aleppo, Smyrna,

⁽B) The cassiari gehira is the berries of an eastern rhamnus, or buckthorn-tree; and may be had at Aleppo, and other parts of the Levant, at a small price. The common Avignon or yellow berries may be substituted, but not with fo good an effect; the cashari gehira being a stronger and brighter yellow dye, both for this use and also that of colouring paper-hangings, &c.

The skins, when dyed, are to pe hung up on a wooden frame, without being folded, with the grain. fide outwards, about three quarters of an hour to drain; when they must be carried to a river or stream of running water, and well washed therein fix times or more. After this they must be put under pressure for about an hour, till the water be well squeezed out; afterwards the skins must be hung up to dry in a warm room.

This being done, the skins are to be dressed and grained as before directed for those dyed red; except

the oiling, which must be omitted.

Blacking LEATHER. In the tanning of leather it is so much impregnated with the aftringent parts of oak-bark, or with that matter which strikes a black with green vitriol, that rubbing it over three or four times with a folution of the vitriol, or with a folution of iron made in vegetable acids, is fufficient for flaining it black. Of this we may be convinced by dropping a little of the folution on the unblacked fide of common shoe-leather. This operation is performed by the currier; who, after the colouring, gives a gloss to the leather with a folution of gum-arabic and fize made in vinegar. Where the previous aftringent impregnation is infufficient to give due colour, and for those forts of leather which have not been tanned, fome galls or other astringents are added to the solution of iron; and in many cases, particularly for the finer forts of leather, and for renewing the blackness, ivory or lampblack are used. A mixture of either of these with linfeed oil makes the common oil-blacking. For a shining blacking, small beer or water are taken instead of oil. in the quantity of about a pint to an ounce of the ivory-black, with the addition of half an ounce of brown fugar and as much gum-arabic. The white of an egg, fubstituted for the gum, makes the black more thining, but is supposed to hurt the leather, and make it apt to crack. It must be obvious, however, that all these compositions admit of a great many variations.

Gilding of LEATHER. Take glair of the whites of eggs, or gum water, and with a brush rub over the leather with either of them : then lay on the gold or filver, and, letting them dry, burnish them. See the

articles GILDING and BURNISHING.

To drefs or cover LEATHER with Silver or Gold. Take brown-red; grind or move it on a stone with a muller, adding water and chalk; and when the latter is diffolved, rub or lightly daub the leather over with it, till it looks a little whitish; and then lay on the leaffilver or gold before the leather is quite dry, laying the leaves a little over each other, that there may not be the least part uncovered; and when they have well closed with the leather, and are fufficiently dried on and hardened, rub them over with an ivory polisher, or the foretooth of a horse.

LEAVEN, a piece of four dough, used to ferment and render light a much larger quantity of dough or paste. See BREAD, BARM, and BAKING.

Leaven was firifily forbidden by the law of Mofes during the feven days of the paffover; and the Jews, in obedience to this law, very earefully purified their houses from all leaven as soon as the vigil of the feast began. Nothing of honey or leaven was to have place in any thing prefented to the Lord, upon his altar, during this folemnity. If, during the feaft, the leaft

particle of leaven was found in their houses, they ima- Leaves gined the whole was polluted, for a little leaven leaveneth the whole lump. Leaven, in its figurative fense, fignifies the bad passions of envy and malice, and rancour, which four the temper, and extend their ferment over the focial affections; whereas unleavened bread implies fincerity and truth. It is frequently used for any kind of moral contagion.

LEAVES OF PLANTS. See LEAF.

king, nº 37

LEBADEA, or LEBADIA, an ancient town of Bœotia, on the borders of Phocis, fituated between Helicon and Chæronea, near Coronæa. In it flood the oracle of Jupiter Trophonius, which whoever went to confult, descended into a subterraneous gulf.

LEBEDA, an ancient fea-port town of Africa, in the kingdom of Tripoli, with a pretty good harbour, and an old caltle, feated on the Mediterranean Sea;

in E. Long. 14. 50. N. Lat 32. 10.

LEBEDOS, reckoned among the twelve ancient cities of Ionia, was fituated to the fouth of Smyrna. It was the relidence of stage-players, and the place where they met from all parts of Ionia, as far as the Hellespont, and celebrated annual games in honour of Bacchus, (Strabo). It was overthrown by Lyfimachus, who removed the inhabitants to Ephefus; fcarce ever after recovering itself, and becoming rather a village than a town, (Horace.)

LEBEN, or LEBENA, (anc. geog.) one of the port-towns of the Gortynians, near the promontory Leon, on the fouth-east fide of Crete; famous for a temple of Æsculapius in imitation of that of Cyre-

LEBRIXA, an ancient, strong, and pleasant town of Spain, in Andalufia; feated on a territory abounding in corn, wine, and a great number of olive-trees, of whole fruit they make the best oil in Spain. W. Lon. 5. 32. N. Lat. 36. 52.

LEBUS, a town of Germany, in the circle of Upper Saxony, and in the marquifate of Brandenburg, with a bishop's see, secularized in favour of the house of Brandenburg. It is feated on the river Oder, in

E. Long. 14. 55. N. Lat. 52. 28.

LECCE, a rich, populous, and most beautiful town of Italy, in the kingdom of Naples and in the Terra d'Otranto, of which it is the chief place, and the fee of a bishop. E. Long. 18. 20. N. Lat. 40. 38. LECCO, a town of Italy, in the duchy of Milan,

feated on the eastern fide of the lake Como. E. Long.

9. 40. N. Lat. 45. 45.

LECHLADE, a town of Gloucestershire in England, feated at the confluence of the river Lech with the Thames. W. Long. 2. 15. N. Lat. 51. 42.

LECHNICH, a town of Germany in the circle of the Lower Rhine, and in the electorace of Cologne.

E. Long. 6. 35. N. Lat. 50. 40.

LECTI, beds or couches, were of two kinds amongst the Romans, as being destined to two different uses, to lie upon at entertainments, and to repose upon for nightly rest. The first were called letti tricliniares, the other ledi cubicularii. See BEDS.

LECTICA, was a litter or vehicle, in which the Romans were carried. It was of two kinds, covered and uncovered. The covered lectica is called by PliLecturers. dered his fervants to stop his litter that he might sleep upon the road. This vehicle was carried by fix or eight men called ledicarii. The lectica differed from the fella, for in the first the traveller could recline himfelf for fleep, in the latter he was obliged to fit. The lectica was invented in Bithynia: the fella was a Roman machine, and esteemed the more honourable of the two. Lectica was also the name of the funeral bed or bier for carrying out the dead.

LECTICARII, among the Romans, fervants who

carried the LECTICA.

LECTICARIUS was also an officer in the Greek church, whose business it was to bear off the bodies of those who died, and to bury them. These were other-

wife denominated decani and copiate.

LECTIO, reading. Confidered in a medicinal view, it is faid by Celfus, lib. i. cap. 4. to be bad, especially after fupper, for those whose heads are weak; and in lib. 1. cap. 8. he recommends reading with an audible voice for fuch as have weak stomachs. It is also directed by Paulus Æginetus as an exercife, lib. 1.

cap. 19.
LECTISTERNIUM, a folemn ceremony observed by the Romans in times of public danger, wherein an entertainment was prepared with great magnificence, and ferved up in the temples. The gods were invited to partake of the good cheer, and their statues placed upon couches round the table in the fame manner as men used to fit at meet. The first lectisternium held at Rome was in honour of Apollo, Latona, Diana, Hercules, Mercury, and Neptune, to put a stop to a contagious distemper which raged amongst the cattle, in the year of Rome 354. At these feasts the Epulones prefided, and the facred banquet was called epulum. See EPULO, EPULUM, &c.

Something like the lectifternium was occasionally observed amongst the Greeks, according to Cafau-

LECTORES, among the Romans, fervants in great mens houses, who were employed in reading while their mafters were at supper. They were called by the Greeks ANAGNOSTE.

LECTOURE, an ancient and strong town of France, in Gascony, with a castle and a bishop's see; feated on a mountain at the foot of which runs the river Gers. E. Long. o. 42. N. Lat. 43. 56.

LECTURERS, in England, are an order of preachers in parish churches, distinct from the rector, vicar, and curate. They are chosen by the vestry, or chief inhabitants of the parifh, supported by voluntary subfcriptions and legacies, and are usually the afternoon preachers in the Sunday fervice. The term is also more generally applied to those who preach on Sunday, or on any stated day of the week, in churches, or other places of public worship. By 13 & 14 Car. II. cap. 4. lecturers in churches, unlicenfed, and not conforming to the liturgy, shall be disabled, and shall also fuffer three months imprisonment in the common gaol; and two justices, or the mayor in a town corporate, shall, upon certificate from the ordinary, commit them accordingly. Where there are lectures founded Nº 179.

Lecticarii ny subiculum viatorum, a traveller's bed-chamber: And or confent of rectors of churches, &c. though with the indeed we are informed that Augustus frequently or- leave and approbation of the bishop; such as that of Lady Moyer's at St Paul's. But the lecturer is not intitled to the pulpit, without the confent of the rector or vicar, who is possessed of the freehold of the

LEDA, (fab. hift.) a daughter of king Thefpius and Eurythemis, who married Tyndarus king of Sparta. She was feen bathing in the river Eurotas by Jupiter, when she was some few days advanced in her pregnancy, and the god, ftruck with her beauty, refolved to deceive her. He perfuaded Venus to change herfelf into an eagle, while he affumed the form of a fwan, and after this metamorphofis Jupiter, as if fearful of the tyrannical cruelty of the bird of prey, fled through the air into the arms of Leda, who willingly sheltered the trembling swan from the assaults of his fuperior enemy. The careffes with which the naked Leda received the fwan, enabled Jupiter to avail himfelf of his fituation, and nine months after this adventure the wife of Tyndarus brought forth two eggs. of one of which fprung Pollux and Helena, and of the other Castor and Clytemnestra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologists attribute this amour to Nemesis and not to Leda; and they farther mention, that Leda was entrufted with the education of the children which fprung from the eggs brought forth by Nemesis. To reconcile this diversity of opinions, others maintain that Leda received the name of Nemefis after death. Homer and Hefiod make no mention of the metamorphofis of Jupiter into a fwan, whence fome have imagined that the fable was unknown to these two ancient poets, and probably invented fince their age.

LEDBURY, a town of Herefordshire in England. It is a well-built town feated on a rich clay foil, and inhabited mostly by clothiers, who carry on a pretty large trade. W. Long. 2. 27. N. Lat. 52. 6.

LEDESMA, an ancient and ftrong town of Spain. in the kingdom of Leon, feated on the river Tome, in

W. Long. 5. 25. N. Lat. 47. 2.

LEDGER, the principal book wherein merchants

enter their accounts. See BOOK-REEPING.

LEDUM, MARSH EISTUS, Or Wild Rosemary ! A genus of the monogynia order, belonging to the decandria class of plants; and in the natural method ranking under the 18th order, Bicornes. The calyx is quinquefid; the corolla plain and quinquepartite; the capfule quinquelocular, and opening at the bafe. There is but one species, viz. the palustre, with very narrow leaves. This grows naturally upon bogs and moffes in many parts of Yorkshire, Cheshire, and Lancashire; rifing with a flender shrubby stalk about two feet high, dividing into many flender branches, garnished with narrow leaves, not much unlike those of heath. The flowers are produced in small clusters at the end of the branches, and are shaped like those of the strawberrytree, but spread open wider at top. These are of a reddish colour, and in the natural places of their growth are fucceeded by feed-veffels filled with fmall feeds which ripen in autumn .- This plant is with great difficulty kept in a garden; for as it naturally grows upon by the donations of pious persons, the lecturers are bogs, unless the plants have a similar soil they will appointed by the founders without any interpolition not thrive. They must be procured from the places of they will not live.

LEE, an epithet used by seamen to distinguish that part of the hemisphere to which the wind is directed, from the other part whence it arifes; which latter is accordingly called to windward. This expression is chiefly used when the wind croffes the line of a ship's courfe, fo that all on a fide of her is called to windward, and all on the opposite fide to leeward. Hence,

Under the LEE, implies farther to the leeward, or farther from that part of the horizon whence the wind

blows : as.

Under the LEE of the Shore; i. e. at a short distance from the shore which lies to windward. This phrase is commonly understood to express the fituation of a veffel anchored, or failing under the weather-shore, where there is always smoother water, and less danger of heavy feas, than at a great diffance from it.

LEE-Larches, the fudden and violent rolls which a thip often takes to the leeward in a high fea, particularly when a large wave firikes her on the weather-

fide.

LEE-Side, all that part of a ship or boat which lies between the mail and the fide fartheft from the direction of the wind; or otherwise, the half of a ship, which is pressed down towards the water by the effort of the fails, as separated from the other half by a line drawn through the middle of her length. That part of the ship which lies to windward of this line is accordingly called the weather fide. Thus admit a ship to be failing fouthward, with the wind at east, then is her flarboard or right fide the lee-fide; and the larboard, or left, the queather-fide.

LEE-Stone. See LEE-Penny.

LEE-Way. See NAVIGATION. LEE (Nathaniel), a very eminent dramatic poet of the last century, was the fon of a clergyman, who gave him a liberal education .- He received his first rudiments of learning at Westminster school; from whence he went to Trinity college, Cambridge .-Coming to London, however, his inclination prompted him to appear on the theatre; but he was not more fuccessful in representing the thoughts of other men, than many a genius besides, who have been equally unfortunate in treading the stage, although they knew fo well how to write for it. He produced xs tragedies, all of which contain a very great portion of true poetic enthufiasm. None, if any, ever felt the passion of love more truly; nor could any one describe it with more tenderness. Addison commends his genius highly; observing, that none of our English poets had a happier turn for tragedy, although his natural fire and unbridled impetuofity hurried him beyond all bounds of probability, and fometimes were quite out of nature. The truth is, this poet's imagination ran away with his reason; so that at length he became quite crazy; and grew fo mad, that his friends were obliged to confine him in bedlam, where he made that famous witty reply to a coxcomb scribbler, who had the cruelty to jeer him with his misfortune, by observing that it was an easy thing to write like a madman:-" No (faid Lee), it is not an easy thing to write like a madman; but it is very easy to write like a feol." Lee had the good fortune to recover the use of his reason so far as to be discharged from his melancholy confinement; but he offered to pay the money, and keep the Lee-penny; but

did not long furvive his enlargement, dying at the early age of 34. Cibber, in his Lives of the Poets, fays he perished unfortunately in a night-ramble in London streets .- His Theodofius and Alexander the Great are flock plays, and to this day are often acted with great applause. The late Mr Barry was particularly fortunate in the character of the Macedonian

LEE- Penny, or Lee-Stone, a curious piece of antiquity belonging to the family of Lee in Scotland, and of which the following account has been given in the Gentleman's Magazine for December 1787.

It is a stone of a dark red colour and triangular shape, and its fize about half an inch each fide. It is fet in a piece of filver coin, which, though much dea shilling of Edward I. the cross being very plain, as it is on his shillings .- It has been, by tradition, in the Lee family fince the year 1320 odds; that is, a little after the death of King Robert Bruce, who having ordered his heart to be carried to the Holy Land, there to be buried, one of the noble family of Douglas was fent with it, and it is faid got the Crowned Heart in his Arms from that circumstance: but the perfon who carried the heart was Simon Locard of Lee, who just about this time borrowed a large fum of money from Sir William de Lendfay, prior of Air, for which he granted a bond of annuity of ten pounds of filver, during the life of the faid Sir William de Lendfay, out of his lands of Lee and Cartland. The original bond, dated 1323, and witneffed by the principal nobility of the country, is still remaining among the family papers.

As this was a great fum in those days, it is thought it was borrowed for that expedition; and, from his being the person who carried the royal heart, he changed his name to Lockheart, as it is sometimes fpelled, or Lockhart, and got a heart within a lock for part of his arms, with the motto Corda ferata pando.-This Simon Lockhart having taken prisoner a Saracen prince or chief, his wife came to ranfom him ; and on counting out the money or jewels, this stone fell out of her purse, which she haltily snatched up; which Simon Lockhart observing, infilted to have it. elfe he would not give up his prisoner .- Upon this the lady gave it him, and told him its many virtues, viz. that it cured all diseases in cattle, and the bite of a mad dog both in man and beaft. It is used by dipping the stone in water, which is given to the difeafed cattle to drink; and the person who has been bit, and the wound or part infected, is washed with the water. There are no words used in the dipping of the stone, nor any money taken by the servants, without incurring the owner's displeasure. Many are the cures faid to be performed by it, and people come from all parts of Scotland, and even as far up in England as Yorkshire, to get the water in which the stone is dipped, to give their cattle, when ill of the murrain especially, and black leg .- A great many years ago, a complaint was made to the ecclefiaftical courts against the laird of Lee, then Sir James Lockhart, for ufing witchcraft .- It is faid, when the plague was last at Newcastle, the inhabitants fent for the Lee-penny, and gave a bond for a large fum in truft for the loan; and that they thought it did so much good, that they

the gentleman would not part with it. A copy of this fale of cloth, built in 1758. The merchants of this Lee's. mily papers, but supposed to have been spoiled, along with many more valuable ones, about 50 years ago, by

nority, and no family refiding at Lee. The most remarkable cure performed upon any perfon, was that of Lady Baird of Sauchtonhall, near Edinburgh; who having been bit by a mad dog, was come the length of a hydrophobia; upon which, having fent to beg the Lee-penny might be fent to her house, she used it for some weeks, drinking and bathing in the water it was dipped in, and was quite recovered. This happened above 80 years ago; but it is very well attefted, having been told by the lady of the then laird of Lee, and who died within these thirty years. She also told, that her husband Mr Lockhart, and she, were entertained at Sauchtonhall by Sir Robert Baird and his lady, for feveral days, in the most fumptuous manner, on account of the lady's recovery, and in gratitude for the loan of the Lee-penny fo long, as it was never allowed to be carried away from the house of Lee.

N.B. It was tried by a lapidary, and found to be a flone; but of what kind he could not tell.

LEECH, in voology. See HIRUDO.

LEECHES in a ship, the borders or edges of a fail

which are either floping or perpendicular.

The leeches of all fails whose tops and bottoms are parallel to the deck, or at right angles to the maft, are denominated from the ship's side, and the fail to which they belong; as the flarboard-leech of the mainfail, the lee-leech of the fore-top-fail, &c. But the fails which are fixed obliquely on the masts have their leeches named from their fituation with respect to the fhip's length; as the fore-leech of the mizen, the afterleech of the jib or fore-flay fail, &c.

LEECH-Lines, certain ropes fastened to the middle of the leeches of the main-fail and fore-fail, and communicating with blocks under the opposite sides of the top, whence they pass downwards to the deck, ferving to truss up those fails to the yard as occasion re-

quires. See BRAILS.

LEECH-Rope, a name given to that part of the boltrope to which the border or fkirt of a fail is fewed. In all fails whose opposite leeches are of the same length, it is terminated above the earing, and below the clue. See BOLT-Rope, CLUE, and EARING.

LEEDS, a town of the West Riding of Yorkshire, 196 miles from London, has a magnificent stone-bridge over the river Aire to the fuburbs. It was incorporated by King Charles I. with a chief alderman, nine burgeffes, and 20 affiftants; and by Charles II. with a mayor, 12 aldermen, and 24 affiftants. It has been a long time famous for the woollen manufacture, and is one of the largest and most flourishing towns in the county, yet had but one church till the reign of Charles I. By the late inland navigation, it has communication with the rivers Merfey, Dee, Ribble, Oufe, Trent, Darwent, Severn, Humber, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles in the counties of Lincoln, Nottingham, Lancaster, Westmoreland, Chester, Stafford, Warwick, Leicester, Oxford, Worcester, &c. Here is a long street full of shops, and a hall for the In Blue hills in the neighbourhood are coal-mines;

bond is very well attefted to have been among the fa- place, York, and Hull, ship them off at the latter. for Holland, Hamburgh, and the north. After ringing of the market-bell at fix or feven in the morning. rain getting into the charter-room, during a long mi- the chapmen come and match their patterns, when they treat for the cloth with a whifper, because the clothiers flandings are fo near each other; and perhaps 20,000 l. worth of cloth is fold in an hour's time. At half an hour after eight the bell rings again, when the clothiers make room for the linen-drapers. hardware-men, shoemakers, fruiterers, &c. At the fame time the shambles are well stored with all forts of fish and flesh; and 500 horse loads of apples have been counted here in a day. There is a magnificent hall, where they also fell great quantities of white cloth; and here is a noble guildhall, with a fine marble statue of Queen Anne, erected about the year 1714. Its river being navigable by boats, they fend other goods, befides their cloth, to Wakefield, York, and Hull, and furnish York with coals. There is a house called Red-hall, because it was the first brick-building in the town, and K. Charles I. had an apartment in it. which is ever fince called the Kirr's chamber. There is another place called Tower-bill, on which there was once a tower; belides which, there was a callle which King Stephen belieged in his march to Scotland. Here was also a park, where are now inclosures. There is a workhouse here of free-stone, where poor children are taught to mix wool, and perform other easy branches of that manufacture, and a part of it has been used many years as an hospital for the reception of the aged poor. Here are three alms houses. and two charity-schools of blue-coat boys to the number of 100. In the cieling of St Peter's, its only parochial church, the delivery of the law to Mofes is finely painted in fiesco by Parmentier. It is a venerable free-stone pile built in the cathedral fashion, and feems to have been the patch-work of feveral ages. The increase of building in Leeds in the year 1786, was nearly 400 houses. There is a Prosbyterian meeting-house here, erected in 1691, called the new chapel, which is the stateliest, if not the oldest, of that denomination in the north of England; and in the town and its fuburbs are feveral other meeting houses, as is always observable in towns of great trade and manufacture. It is noted for fome medicinal fprings; one of which, called St Peter's, is an extreme cold one, and has been very beneficial in rheumatisms, rickets, &c. Here is an hospital for relief of the poor, who had been honest and industrious, endowed with 801. ayear, besides 10 l. a-year for a master to read prayersand instruct them; also a free school. Its markets are Tuesdays and Saturdays, and the market-laws are more frictly observed here than any where. It has two fairs in the year. Leeds, though a large town, fends no members to parliament.

LEEK, in botany. See Allium. Leek, a town of Staffordshire in England, 155. miles from London. It lies among the barren moorlands, has a manufacture of buttons, a market on Wednefday, and 7 fairs in the year. In the churchyard, at the fouth east corner of the chancel, are the remains of a Danish cross, now upright, and 10 feet high from the ground, beneath which are three steps.

Lecuw.

and a falt stream comes from thence, which tinges the stones and earth through which it runs with a rusty colour, and, with the infusion of galls, turns as black as ink. Here are rocks of a most surprising height,

without any turf or mould upon them. LEER, in glass-making, a fort of third furnace, intended to anneal and cool by proper degrees the veffels when made. This properly comprehends two parts, the tower and leer. The tower is that part which lies directly above the melting-furnace, with a partition between them of a foot thick, in the midft whereof there is a round hole, placed exactly over the furnace, through which the flame and heat pass into the tower; on the floor of this tower the veffels are fet to anneal. There are two openings by which the veffels are put into this tower; and after flanding there some time they are put into iron pans, which by degrees are drawn out all along that part of this furnace, which is properly called the leer; which is five or fix yards long, that the vessels may cool by degrees. This leer is continued to its tower and arched all along, and is about four feet wide, and high within. The glaffes are cool by that time they are come to the mouth of this, which enters into a room where the glaffes are placed when taken out.

LEES, the groffest and most ponderous parts of liquors, which, being separated by fermentation, fall to the bottom. The word comes from the French lie; and that either from limus " mud," or from Lyeus one of the furnames of Bacchus; or, according to du Cange, from lia, a corrupt Latin word fignifying the fame.-The vinegar-makers make a great trade of the lees of wine dried and made into cakes, after having squeezed out the remains of the liquor in presses.

LEET, or COURT LEET (leta vifus franci plegii), is a court of record, ordained for punishing offences against the crown; and is faid to be the most ancient court of the land. It inquires of all offences under high treason; but those who are to be punished with lofs of life or member, are only inquirable and prefentable here, and to be certified over to the juffices of affife, (Stat. 1. Edw. III.). And this court is called the view of frank pledge, because the king is to be there certified by the view of the fleward, how many people are within every leet, and have an account of their good manners and government; and every person of the age of 12 years, who hath remained there for a year and a day, may be fworn to be faithful to the king, and the people are to be kept in peace, &c. A leet is incident to a hundred, as a court baron to a manor: for by grant of a hundred, a leet paffeth; and a hundred cannot be without a leet.—The usual method of punishment in the court-leet, is by fine and amercement ; the former affeffed by the fleward, and the latter by the jury.

LEEUW (William de), an eminent engraver of the last century. He was a native of Flanders, and the disciple of Soutman, whose manner of engraving, or rather etching, he imitated. His prints generally appear harsh at first fight; but grow into favour upon examination, and feveral of them have great effect; particularly his Daniel in the lion's den, a large plate lengthwife, from Rubens. The first impressions of this plate are before the name of Dankertz was added,

and are now extremely rare and dear.

LEEWARD Ship, a vessel that falls much to leeward Leeward of her courfe, when failing clofe-hauled, and confequently lofes much ground.

To LEEWARD, towards that part of the horizon which lies under the lee, or whither the wind bloweth, Thus, "We faw a fleet under the lee," and, "We faw a fleet to leeward," are fynonymous expressions.

LEG, in anatomy, the whole lower extremity from the acetabula of the offa innominata, commonly divided into three parts, viz. the thigh, the

leg properly fo called, and the foot. See ANATOMY, I.EGACY, in Scots law, a donation by one person

to another, to be paid by the giver's executor after his death. See Law, no clxxxi, 3.

LEGATE, a cardinal or bishop, whom the pope fends as his ambaffador to fovereign princes. See AM-BASSADOR.

There are three kinds of legates, viz. legates a latere, legates de latere, and legates by office, or legati nati: of these the most considerable are the legates a latere, the next are the legates de latere. See the article LATERE.

Legates by office are those who have not any particular legation given them; but who, by virtue of their dignity and rank in the church, become legates: fuch are the archbishop of Rheims and Arles: but the authority of these legates is much inferior to that of the legates a latere.

The power of a legate is fometimes given without the title. Some of the nuncios are invelled with it. It was one of the ecclefiaftical privileges of England from the Norman conquest, that no foreign legate should be obtruded upon the English, unless the king should defire it upon some extraordinary emergency, as when a case was too difficult for the English prelates to determine.

The term legate comes from legatus, which Varro derives from legere, " to choose;" and others from legare, delegare, " to fend, delegate."

Court of the LEGATE, was a court obtained by Cardinal Woolfey of Pope Leo X. in the uinth year of Henry VIII. wherein he, as legate of the pope, had power to prove wills, and difpense with offences against the spiritual laws, &c. It was but of short continuance.

LEGATEE, in Scots law, the person to whom a

legacy is provided. LEGATIO LIBERA, was a privilege frequently obtained of the state, by fenators of Rome, for going into any province or country, upon their own private bufiness, in the quality of legati or envoys from the fenate, that the dignity of this nominal office might fecure them a good reception, and have an influence on the management of their concerns. The cities and towns through which they passed were obliged to defray their expences .- This was called libera legatio, because they might lay aside the office as soon as they pleased, and were not encumbered with any actual

LEGATUS, a military officer amongst the Romans, who commanded as deputy of the commander in chief. The legati, at their first institution, were not fo much to command as to advise. They were generally chosen by the confuls, with the approbation of

Legend. the fenate. As to the number of the legali, we have no certain information, though we may upon good grounds affign one to every legion. In the absence of conful or proconful, they had the honour to use the fasces.

Under the emperors there were two forts of legati, consulares, and pretorii. The first commanded whole armies, as the emperors lieutenant-generals; and the other had the command of particular legions.

The legati under the proconfuls in the provinces, ferved for judging inferior causes, and management of fmaller concerns, remitting things of great moment to the governor or prefident himself. This was the original office of the legati, as was hinted above ; though, as we have feen, they were afterwards admitted to command in the army.

LEGEND, any idle or ridiculous flory told by the Romanists concerning their faints, and other persons, in order to support the credit of their reli-

The legend was originally a book used in the old Romish churches, containing the lessons to be read at divine fervice; hence the lives of the faints and martyrs came to be called legends, because chapters were read out of them at matins, and at the refectories of religious houses. Among these the golden legend, which is a collection of the lives of the faints, was received in the church with great applause, which it maintained for 200 years; though it is fo full of ridiculous and romantic stories, that the Romanists themfelves are now ashamed of it.

LEGEND is also used by authors to fignify the words or letters engraven about the margins, &c. of coins. Thus the legend of a French crown is, SIT NOMEN DOMINI BENEDICTYM; that of a moidore, IN HOC SIGNO VINCES: on those of the last emperors of Constantinople, we find

IESVS CHRISTYS DASILEVS BASILEON, IHS XPS WIKA, Legend. 1ESVS CHRISTVS VINCITA

LEGEND is also applied to the inscription of medals. which ferves to explain the figures or devices reprefented on them. In ftrictness, the legend differs from the infeription; this last properly fignifying words placed on the reverse of a medal, in lieu of figures.

It feems as if the ancients had intended their medals fhould ferve both as images and as emblems; the former for the common people, and the other for perfons of tafte and parts; the images to reprefent the faces of princes; emblems their virtues and great actions; fo that the legend is to be looked on as the foul of

the medal, and the figures as the body.

Every medal has properly two legends; that on the front, and that on the reverse. The first generally ferves only to distinguish the person by his name, titles, offices, &c. the latter is intended to express his noble and virtuous fentiments, his good deeds, and the advantages the public has reaped by him. This, however, does not hold univerfally; for fometimes we find the titles shared between both sides, and sometimes also the legend.

In the medals of cities and provinces, as the head is usually the genius of the place, or at least some deity adored there, the legend is the name of the city. province, or deity, or of both together; and the reverse is some symbol of the city, &c. frequently without a legend, fometimes with that of one of its ma-

giftrates.

Legends generally commemorate the virtues of princes, their honour and confecrations, fignal events, public monuments, deities, vows, privileges, &c. which are either in Latin or Greek, or a mixture of both, and are intended to eternize their names, and the benefits done by them to the empire.

LEGERD E MAI

Or SLEIGHT of HAND:

DENOMINATION given to certain deceptive A performances, which either depend altogether on dexterity and address, or derive but a small degree of aid from philosophical principles. Of these we shall present our readers with a selection of the best that have been either explained in books or publicly ex-

SECT. I. Performances with Cups and Balls.

Preliminary explamations.

THE following method of exercifing this fimple and ingenious amusement is that practifed by one Mr Kopp a German, whose performances are deservedly preferred to those of former artifls. In this, however, as in all the other branches belonging to the art of legerdemain, it is not fufficient that a person has the requifite dexterity, or fleight of hand; it is necessary also to take off the attention of the spectators by fome entertaining discourse; which not only prevents discovery, but adds greatly to the amusement of the company; for which reason, such discourfe is inferted in this article.

To play his part properly, the performer on cups and balls ought to provide himself with a bag about 12 inches long, and from eight to ten in depth. The infide must be furnished with a number of pockets for holding the feveral articles necessary in the amusement; and this bag the performer must hang before him.

The materials necessary for the performer are,

1. Three white polished tin-cups, represented by A, B, and C (fig. 1.) in the shape of a truncated cone CCLXVII with a double ledge D towards the base. This ledge, which is about half an inch in breadth, serves to raife the cups easily by, admitting also the hand to pass a fmall cork ball (fee fig. 5.) The upper part E of the cup ought to be hollowed in the form of a sphere, sufficient to confain the balls without their appearing

2. It isalfo necessary to have a small rod, called 7acob's flaff; which is usually made of chony, and neatly tipt with ivory at both ends. This is frequently used for ftriking on the cups; and being held in the hand where the balls are also kept, it gives the operator an

above the upper edge of the cups.

varying its polition, in order to avoid being discover-

burning on the outfide.

The dexterity in performing this operation confifts in artfully fecreting a ball in the right hand, and making it to appear or disappear in the same hand. The fecreting it between the fingers is called conjuring the ball, at which time the fpectators are to suppose that it is kept in the other hand, or that it was paffed under a cup; but if it is made to reappear when held fecretly in the hand, they must believe that it came out of the place last touched by the fingers.

Conjuring the ball is performed by putting it between the place of the thumb A and the finger B (fig. 2.), conveying it with the thumb, by rolling it upon the fingers the length of the line BC, moving the middle finger D to a distance, and placing the ball at the junction of the fingers C (fig. 3.); but in this part of the operation it is necessary to hold the ball rather tight. left it should fall down and discover the secret. Inforder to make it appear, we must bring back the ball the fame way from C to D; and every time that it is conjured, or made to disappear, as well as when it is made to reappear, the palm of the hand should be turned from the fide of the table on which the operator is

playing.

While this part of the trick is performing, the operator must let the spectators know that the ball has been paffed under a cup, or into another hand; and in the first case he makes a motion with the hand (as represented fig. 4.) indicating that he had thrown it through the cup; at which time also he conjures it, approaching the two fingers of the right hand towards the left, which last he holds open, and makes a motion as if the ball had been placed there, shutting the left hand inflantly. It is also to be supposed, at every time when a ball feems to be placed below a cup, that it has been held in the left hand; and when he raifes the cup with the right hand as in fig. 5. the left hand must be opened, and he rests the ball at that instant upon the hollow of the other, fliding it along the fingers.

At the time the ball is to be put fecretly under the cup, it should lie between the two fingers of the right hand (fig. 5.) With this hand he raifes the cup; and placing it on the table, lets go the ball, which, according to its position in fig. 6. should be found near the edge of the cup when taken into the hand. If he would put the ball feoretly between the two cups, it must be let go by jerking it towards the bottom of the cup which he holds, and places it very quickly on that in which the ball is to be found. When the ball is in this fituation, if the operator should want it to difappear, he must raise the two cups with his right hand, and draw out haftily that under which the ball is placed; at the fame inftant lowering with his left hand the other cup, under which he places it.

In fpeaking of the tricks which follow, terms are made use of which explain whether what is faid be feigned or true; of which terms explanations are given, and numbers adapted to the explanations of the

different opeations which follow. I. To put the ball under the cup: Really done, with

the fingers of the right or left hand. 11. To put the ball under the cup, or in the hand .-

opportunity of keeping that hand generally shut, or of A feigned conjuration; pretending to shut it up in the left hand, which is afterwards opened, in order to have ed. The balls are made of cork, blackened by flight it supposed that the ball is under the cup or elsewhere. See fig. 3.

III. To pass the ball under the cup .- The ball suppefed to be conjured is to be really introduced.

IV. To pass the ball between the cups, is likewise real. V. To make the ball which is between the cups difappear .- This is likewife real; and performed, as has already been described, by drawing back with much precipitation and dexterity the cup on which it is placed, and lowering upon the table that which is above, and under which the ball must of confequence be found.

VI. To take the ball. Real .- It is taken between two fingers of the right-hand, and shown before con-

VII. To take away the ball from under the cub. This is done by taking it away in the fight of the fpecta-

VIII. To draw the ball. Feigned; or by pretending to draw it from the end of the rod, from the cup. or any other place, by bringing into the fingers the ball which was fecreted.

IX. To throw the ball through the cup, is to conjure

it in pretending to throw it.

X. To raife up the cups. This is really done in three ways; viz. either with the right hand, the rod, or the left hand. The first is when the ball is to be fecretly inferted in returning the cup to its place. In the fecond, the rod is to be put on the tops of the cups to turn them over again, fo that the balls may be shown which were to be passed into them. The third is when the operator intends to show that no balls are in the cups, or that there are fome.

X1. To cover a cup. This is really done, by taking with the right hand that which is to be put over another, and introducing at the same time a ball between

the two.

XII. To recover a cup. It is done by taking with . the left hand the cup to se put over or above, without introducing any thing into it.

The PERFORMANCES.

1. To put a ball under each cup, and take it out again. Having placed on the table the three cups and little energy rod, as shown in fig. 1. the performer must begin his manœuvres, by endeavouring to amuse the spectators with fome kind of entertaining discourse. Nothing can be more a-propos than the origin of the little rod and cups; and he must be very assiduous in this fort of difcourse to take off the eyes of the spectators as much as possible. The following may be a specimen of the " manner in which he ought to address his audience: "There are many perfons who meddle with the play of the cups and balls, and yet know nothing about them. This is by no means extraordinary : even I who now play before you, pretend to know but little. Nay, some time ago, I was such a novice as to think of playing before a numerous affembly with glass cups, in which you may guess I did not meet with great applause. I do not indeed practise this method but before fuch as are actually blind; neither do I play with China cups, left, through aukwardness in feigning to break their handles, I should do so in reality. These are the cups which answer my purposes. They are made of fuch metal as the alchymists attributed to Jupiten.

Jupiter and Mars, or, to fpeak more properly and intelligibly, they are made of tin. Behold and examine thefe cups (flowing the ups to the company, and putting them on the table:) All my fcience, and it is in that in which it is admirable, conflits in deceiving the eyes, and paffing the balls into the cups without your perceiving how it is done. I advife you therefore to pay no attention to my words, but to examine well my hands, (flowing his hands). If there is in this company any perfon who has the misfortune to use fpectacles, he may retire; but the most clear-fighted will

fee nothing there. " Here is the little Jacob's rod (flowing the rod with the left hand); that is to fay, the magazine from which I take all my balls (taking fecretly with the other hand a ball from his bdg, which he hides between his fingers). There is not one in England fo well furnished. Observe, that the more I take from it the more remain: I draw from it (VIII.) this ball, (flowing it, and placing it upon the table, (1.) Observe that there is nothing under the cups (showing the infide of the cubs), and that I have no other ball in my hands, (Thorwing his hands). I take (VI.) this ball: I put it (II.) under this first cup. I draw (VIII.) a second ball from my little rod, and I put it under this fecond cup (actually done). It is proper here to tell you, that the generality of those who play the cups only feign to put the balls there; but I do not deceive you, and I actually put them there. (He raifes the cup B, and taking the ball which he has put under it into his righthand fingers, shows it to the company). I return it (II.) under the same cup. I take (VIII.) this third, and put it (II.) in the fame way under this last cup. You are about to fay that this is not very extraordinary, and that you could do it as well yourfelves. I agree with you; but the difficulty confifts in taking out these balls again through the cups, (striking the first cup with the rod). I take (VIII.) this first ball (bowing it): I put it (II.) into my hand, and fend it to Couflantinople, (he opens the left hand). I take (VIII.) this, (firling with the rod on the second cup). I put it (II.) into my hand, and I fend it to the East Indies, (opening his left hand). I take (VIII.) the laft, and I put it (I.) on the table: Observe that there are no more under any of these cups, (turning down the cups with the

2. With the fingle hall remaining on the table, to pass a ball through each of the cupt, and to take it offfrom the same. "I return the cupt to their places, and take (Vt.) this ball, and I put it under this first cup. I take it back again (VIII.): observe that it is not there now, fraising (X.) the cop with the left hand). I put it (II.) under this other cup: 1 take it out again (VIII.) in the same manner, fraising (X.) the cup!. I put it (II.) under the last eup, and take it out again, (VIII.) (raising the last cup awith the left hand, and placing the ball on the table).

3. With the fingle ball remaining on the table, to take away a ball through two or three cups.—In this performance the three cups are diffinguished by A, B, C, as

"I never have any ball fecreted in my hands, as the greatest part of them who play the cups and balls have (showing his hands). I take (VI.) this ball, and

I put it (II.) under this cup B. I cover it (XII.) with this cup C, and I take again (VIII.) this ball thro' the two cups (flower the ball in placing in on the table, resures afterwards the cup C to its place, and raife (X.) the cup B to flower that there is making there). I take again (VI.) this fame ball. I put it (II.) under the fame cup B: I cover it (XII.) with the two other cups C and A; and I take out (VIII.) this ball through the three cups (flowering it and placing it on the table).

4. With the fingle ball remaining on the table, to pass the fame ball from cup to cup .- " I now beg of you to pay every possible attention, and you will very distinctly fee this ball pass from one cup into the other (putting the cups at a greater distance from each other). I take (VI.) this ball, and I put it (II.) under the cup C: there is nothing under this cup B (raising it, introducing the ball, and taking the rod in his hand). I command that which I have put under the cup C to pass under that B. You fee it (moving the end of the rod from one cup to the other, as if he followed the ball): observe that it is passed (raising the cup with his left hand, and taking the ball with his right, shows it to the company). I return it (II.) under this cup B; there is nothing under this A (raifing the cup with his right hand, and introducing the ball there). I am going to pass it under this lait cup A. Look well; come near; (making as if in feeing it he would show with the end of the rod the path that it took). You did not fee it pass? I am not much furprifed : I did not fee it myfelf; however, here it is under the cup (raifing the cup A, and placing it on the

5. With the same ball remaining on the table. The cups being covered, to pass a ball from one into the other, without raising them up .- " I was very right in telling you, that the most clear-fighted would not fee very much; but, for your comfort, here is a trick in which you will fee nothing at all. I take this ball, and put it (II.) under this cup B. I cover it (XI.) with the two other cups (taking one in each band, and introducing the ball upon the cup B): pay attention, that there is absolutely nothing in my hands (flowing them). I command this ball to mount up upon the first cup (taking up the two cups, and putting them in their places, be shows that it has mounted). I return (II.) this ball under the same cup B. I cover it as before (covers it in taking a cup in each hand, and introducing a ball between the fecond and third cup.) I take (the only ball with which he plays being under the third cup, he cannot show it, but acts as if he had taken it out, and put it into the fin-gers of his left hand, which he holds in the air, in conducting the hand from one side to the other). I take the ball, which is under these three cups; and I throw it thro' the first cup (feigning to throw it): observe that I have not conjured the ball, having nothing in my hands (showing them); it is passed, however, (raising the first cup with the left hand, putting the ball upon the table and the cups in their places.)

6. With the fingle ball remaining on the table, to pafe a ball through the table and two cups.—'You are undoubtedly fupriced, that, having but a single ball, I have been able, after having shown it to you, to pass it under this cup without raising it; but let not that altorish you.'I have secrets much more wonderful. I

convey.

convey, for example, the steeple of one village into another: I have fympathetic quadrants, with which a conversation may be held at 200 leagues diffance : I have a flying chariot which can conduct me to Rome in three days. I will show all these curiosities as soon as my machines are entirely completed; that is to fay, in a few centuries: but to amuse you till the arrival of all these prodigies, I now continue the entertainment of the cups and balls. I put (II.) this ball under the cup A. I take it away again (VIII.) (Showing it, and feigning to put it into his left-hand fingers). I cover (XI.) this cup with the two others B and C (introducing the ball between thefe two cups, using always the right hand, and feigning still to hold it in his left), and I pass this same ball through the table and the two cups (putting the left hand under the table.) There it is passed (raising the first cup.)

7. With the fame ball. A ball bowing been put under a cup, to take it away again, and to paj it between two others.—" Here is again a very pretty trick: I take this ball, and I put it (II.) under this cup A. Obferve, that there is nothing under the others (bowing them and introducing the ball under the cup C.), nor in my hands: I take this ball, which is under the cup A (fixing to take it out, and raifing the ballom of the cup fo that the feetators may not attend to his figure;) I cover this cup C with the two others A and B, and I throw it (IX.) through thefe two cups (raifing them)

and showing that the ball is passed there).

8. With this fingle ball and a filling; to pais a ball from one hand into the other—" I take this ball; I put it (II.) into this hand, and I put into the other the fhilling. In which hand do you think the ball is? or in which do you think the filling may be?" (Whatever angiver the flettator makes, the performer floous him that be it millakes, and that the whole is in the right hand; and this truth ferves as a pretence to take a ball from the bag in putting the falling back into it.)

The performer may, however, without breaking the connection of these operations, dispense with this trick, and seign to drop the ball he plays with, which affords

him a pretence for taking another.

9. With the ball remaining on the table, and that which is secretly taken out of the bag; to pass under a cup the two balls but under the others .- The operator goes on with his difcourse : " In order to give you fill farther amusement, I take this ball and cut it in two (taking it in his left hand, and holding the red with his right; feigning to cut it, he puts afterwards the rod on the table. and brings back to his fingers ends the ball which he took out of the bag). Nothing is to commodious as to be able in this manner to multiply the balls. When I am in want of money, I cut them again and again, until I may have had five or fix bushels (placing the two balls on the table). Observe that there is nothing under this cup A. I put there (II.) this first ball : there is nothing more under the two other cups (introducing the ball under the cup B). I take this fecond ball, and I put it (II.) under the cup C: there is now a ball under these two cups A and C. I take away (VIII.) from this cup C this ball, and I throw it (IX.) thro' the middle cup B: observe that it is passed (raising the cup B, and introducing there the second ball). I command this, which is under the other cup A, to pass under the same cup B (raising this cup, and showing that they are both there, and placing them upon the table).

10. With the two balls which are upon the table. Two balls having been put under the same cup, to pass them under two others .- " When I was at college, the tutor told me, it was necessary to know how to do my exercife in two ways. I have just now passed these two balls into the middle cup; I am now to make them go out; the one is not more difficult for me than the other. I take therefore these two balls, and place them under this cup B (putting bne ball under the cup, and conjuring the other); observe that there is nothing under the cup A, nor under the other C (introducing into this last the ball that he conjured): I command one of these balls, which are under the middle cup, to pass under the one or the other of these two cups A and C. Behold it already gone (raifing the cup B to flow that there is no more than a fingle ball; and taking, with the right hand, the ball which is underneath, he shows it, and puts it (II.) under the same cup B). Let us see into which cup it has passed (roising immediately the cup A, and introducing the ball that he took from the cup B): here it is under this cup C (raifing the cup;) I command the other ball to pass under this cup A (be raifer it, and shows that it passed there)." This trick is frequently done with three balls, but it appears much more extraordinary with

11. With thefe two balls, a third abile he flowus, and a fourth feered in his hands; to paft three balls under the fame cup—" All this is but a trifle; I am going to thow you another trick with three balls (taking out of the bag a third ball, and plaing it on the table, feering at the fame time a fourth in his hand). Observe that there is nothing under any of thefe cups (raifing them, and introducing them under the cup C). I take this first ball, and throw it (IX.) through this oup C. Observe that it is passed (IX.) the cup units the right hand): I take this fectod ball, and throw it (AI.) through the fame cup. There it is passed (raifing (X.) again the cup); I take the thirth, and I make it pass the fame (raying (X.) the cup, and flowwing that the fare passed (raifing (X.) the cup, and flowwing that the fare passed in the fame cup.

under all the three).

12. With the three balls remaining under the cup, and that held fecretly in the hand; to pass two balls from one cup into onother, at the choice of a person, without touching any of the cups .- " Here is another in which I have never been able to comprehend any thing; but it will aftonish you much (raising the cup C, and taking away the three balls from their places, he puts them under each cup, and in raifing the cup C introduces there the fourth ball which be held fecretly in his hand). I take this ball (that which is under the cup B), and I put it (II.) under the same cup. I take this (the ball from the cup A), and I place it (I.) under the same cup (putting there also that which was fecreted in his band) : I take this last, and I throw it (IX.) through the cup C; and to show that I do not deceive you, behold it passed (raising (X.) the cup that has been fixed upon, which suppose to be C, and showing that there are two). I take again these two balls, and put them under the cup C (putting really but one): observe that there is no more under this cup B (introducing there the ball that he had just taken away; and showing that he had no other in his hand); I command one of these balls, which are under this cup C,

to go and join that which is under this A. Observe that it is passed. There! (raising the cup C, and returning the tavo balls under the same cub, and raising C, in order to show that there is but a fingle one; and he places it again under the same cup : he does not raise the sup B under which

a ball remains). 13. With the three balls that were placed upon cups, and that publich remains hidden under the middle cut : to pais under the same cup the balls put under the others .-"I take this ball (that which is upon the cup C), and I put it (II.) under the same cup C: and I order it to pass into this cup B: there it is passed (in raising this cup he introduces a third ball). I take this third ball, and put it (II.) under this cup C; and I command it to pass into the cup B along the table, and in the fight of the fp dators (taking the rod in his left hand, feigning to show the way that it passed between the two cups). You did not see it then? Here it is (He draws it (VIII-) from the end of the rod, which appears to show it). Go quickly (throwing it (IX.) through the cub B; and showing that they are all three there, and that there is nothing under the two others; placing afterwards three of the balls on the table, and fecreting the fourth in bis hand).

14. With the three bels remaining upon the table, and that which is held fecretly in his hand .- Multiplication of

the balls.

For this trick there must be a tin vase (see fig. 8.), at the bottom of which there must be contrived a false bottom A, which will fall down at pleafure : that is to fay, in reverling it upon the table, by means of a small trigger placed at the base of one of the handles B, introducing previously between the false and true bottoms a dozen of balls. The operator goes on with his

" If any of the company believe in witches, I would give my advice that they should believe in them no longer: as what I am about to do is much more furprifing than the feats of any witch -I put (I.) thefe three balls under the three cups you fee on the table: I take away (VII.) this first ball (that which is under the cup C), and I put it (II.) into this vale. take this, and I also put it (II.) into the vase. take away (VII.) this third (that which is under the cup A), and I throw it (II.) the fame way". (Every Fime that he raises one of the cups to take away the ball, he introduces that which always remains secreted in his right hand; and this he repeats, constantly taking out one ball and putting in another, till he has introduced all the twelve balls; after which he refumes his discourse.) "You imagine, perhaps, that I always make use of the same balls; but, to prove the contrary, here they are, (inverting the vafe fo as to turn them all out).

In this trick, if the vafe be well made, the infide may be shown, and it may even be previously inverted; in which case, it will not be supposed that any

balls have been put into it.

5. With the three balls remaining under each of the cubs, and that which is hidden in his hand; to pass one

ball under each of the three cups.

" I put all these balls into my pocket. I take (VI.) this (the one fecreted in his hand), and I make it pass through the table under this first cup C, (connuring it). I take another from my bag (showing the fame ball). I make it pass in the same manner through Nº 179

this B, (conjures it again). I take a third (Spozving fill the fame), and I make it pass under this last cup A (conjuring it). Here are all the three passed (turning over the cups, and in taking them up again introduces the ball that he has in his hand under the cup B, and puts

the three balls upon the three cups. 16. With the three balls put upon each cup, and that which was introduced under the middle cup; to draw typo balls through the fame cup.—"There will be wanted now only two balls." Here the operator takes that which is under the cup C, and puts it (II.) into his bag. He takes in the fingers of his right hand the ball which is on the cup B, showing it; and with the other covers the cup B, with that paffing (IV.) there the ball which he feigned to put into his bag. He then takes the ball which is under the cup A with the right hand; and showing a ball in each hand, tells the company that he put them (II.) under the cup A ; though he actually puts but one, which he holds in his left. He then draws one of thefe balls through the same cup A, showing it, and placing it upon the cup C. He then raifes the cup A, and takes the ball which is under it with his right hand, adding, "There remains but one more," While pronouncing these words, he puts it (II.) under the cup. " I take (adds he) the other ball," (raifing the cup, and showing that it is there no longer); then, taking one of the two balls which feemed to remain alone, he put it (II.) into his bag, faying, " I return this into my bag."

17. With a ball which is hidden under the middle cub. another hidden under that which covers it, that which remains in the hand, and a fourth which is upon the table; to pass the same ball successively through the three cups .-The preceding trick was only on purpose to prepare the spectators for this; as they now imagine that the performer played only with one ball. He may now

address them in the following manner:

". I am now going to make a very pretty trick with this fingle ball. I forgot to show it to you at the beginning: I cover (XI.) thefe cups (putting the cup A upon C and B). I take (VI.) this ball, and I throw it (IX.) through the first cup;" (raifing (X.) the cup A with the right hand). He then shows that it is passed between C and A; and, putting it in its place, he introduces there that which he has in his hand, "I take (fays he) (VI.) this fame ball, and I throw it through the other cup C;" and while he fays fo, he raifes (X.) the cup C, showing that it has paffed, introducing there that which he has in his hand, and putting it in the place of the former. " I take again (continues he) (VI.) this fame ball, and I throw it (IX.) through that last cup B," (raising (IX.) the cup B.) During which time he takes away the ball from under it with his left hand, then places it on the table, and returns the cup to its place, introducing there the ball which he has in his left hand.

18. With the three balls which are under the cuts, that which is on the table, and two which he takes from the bag; to pass under a cup the balls put under the two others without raising these last .- The performer may proceed in his difcourfe in the following manner:

" Let us now return to the order of the entertainment which I have interrupted, and continue to play with three balls." He now takes two balls from his

bag, by which means he in fact plays with fix balls, and throws it (IX.) between the two cups B and C. though he pretends to play only with three. Thefe two balls, together with that which remains on the table, he puts on the top of each cup. "I take (fays he) (VI.) this ball, (that which is on the cup C). I throw it (IX.) through that cup: there it is paffed." He now raifes (X.) the cup, shows it; and thus has an opportunity of introducing the ball which he has in his hand. "I take (VI.) this (the ball which is under the cup B), and throw it (IX.) through the cup B." At this he raifes the cup with his left hand, showing that it has passed, and covering it again. "I take again (VIII.) this ball from the same cup, and throw it (IX) through that C: observe that it is paffed." Then, raifing up (X.) the cup C, showing that there are then two there, he introduces other two which he had in his hand. "I take (fays he) (IV.) this ball (that which is under the cup A), and I throw it (IX) through the same cup A. There! it is paffed," (raifing the cup C); after which he shows the three balls, and introduces there that which was in his hand, putting the three balls upon the table.

10. With the three balls which remain under the cups, and the three others which remain upon the table; to pass feparately the three balls through each cup .- In this maneuvre the performer puts again the three balls which are upon the table upon the top of each cup. He takes that which is on the cup C, and throws it (IX.) through the fame cup; and while he announces this to the company, he raifes (X.) the cup: taking away (VIII.) the ball, showing that it has passed, introducing there that which was in his hand, and putting the same ball upon the same cup. He then takes that which is upon the cup B, and throws it (IX.) through the fame cup; shows that it is, passed, takes it away (VII.), and introduces the ball that was in his hand under this cup, putting it in like manner on the cup. Then he takes the ball which is on the cup A, and throws it (1X.) through the same cup A. As he announces its paffage he raifes the cup, taking away (VII.) and showing the ball; introducing in the fame manner that which was in his hand; putting this first at the top of the cup A, and then shows that it is not in his hand, and that he has but

20. With the three balls remaining upon the table, and those which are under each cup. Having put the balls into the bag, to make them return under the cups .- " I take these three balls, and I return them into my bag. (keeping one in his hand). Behold to what all is reduced that I had to show you for your amusement. I did know fome more very pretty tricks, but I have forgot them. (Pretending to muse for a moment): Ah! I still remember two or three very pleasing ones. Come, my little balls! Return under the cups. (turning over the cups). See how nimble they are, and obedient at the same time;" (covering them again with the

21. With the three balls which are under the cups, and that in his hand; to pass the balls through the two cups. -Here the operator begins with taking away (VII.) the ball which is under the cup C; he covers it with the cup B; and paffes (III) the other ball which he has in his right hand between the two cups. He then takes (VI.) the ball which he had in his left hand, Vol. IX. Part II.

In announcing its passage he raises the cup (X.). shows that it is passed, and introduces the ball in his hand. He then takes the ball under the cup B, and throws it (IX.) through the two cups C and B. Announcing to the company its passage, he raises (X.) the cup, and shows that there are two balls, introducing (III.) at the fame time the third. He then takes the last ball, viz. that which is under the cup A, co vers again with the left hand the two cups B and C. and throws (IX.) the third ball through thefe two cups. He then announces their passage, raises the two cups, and shows the three balls, covering again the cup C with the two others.

22. With the three balls which are upon the cup C. and the one in his hand; to take out the three through two cups .- " I take (fays the performer) (VIII.) the first ball, and put it (II.) into my bag. I take (VIII.) in the fame manner the fecond, and I put it also into my bag. I take (VIII) the third, and I put it into my bag. (putting in really that which he had in his hand.) While he defires the spectators to observe that there are no more in the cups, he raises the cup A with the left hand, and, putting it in its place, raifee with the right hand the cup C. In fupporting it with the cup B, he puts it down quickly, and a little on the fide of B, and at the fame time places C on the table, under which will be found the three balls, which had not time to separate.

23. With the three balls remaining under the middle cup, and three others taken out of the bag; to pass, in one action, three balls through a cup.—This trick is begun by the performer taking three balls from his bag, and putting them on the top of the cup B, which he covers with the cup A. Ordering them to disappear and to pass under the cup C, he takes away very suddealy with the left hand the cup B, as is done in the preceding trick, leaving in the middle of the play the cup C, under which the balls are found. Taking them then away, and replacing them on the fame cup, he makes them return again in the fame manner under the cup C. At last he takes the three balls, and putting them in his bag, pretends to pass them through the table under the cup where the others were. He then returns two or three of these last balls into his bag, and takes two white balls, which he puts upon the

24. With the black ball remaining on the table, two other white balls, and a black one which he holds fecretly in his hand; to pass three balls from one cup into another.

N. B. To make the balls white, they are rubbed with a little chalk inflead of being blackened with the candle.

" Let us now (fays the operator) have a trick to prove that I do not conjure the balls. There is nothing under this cup C, (introducing the black ball that was in his hand). There is no great thing under this B. I place there these three balls, (the three which are upon the table, of which he conjures the white one.) There is nothing more under this third cup A, (introducing there the white ball). I order one of these two white balls which are under the cup B, to pass under this A." With these words he raises the cup B; and taking the white ball in the fingers of his left hand, and the black one in those of the right, he shows them.

5 D faying, faying, "Observe that there is but one white one. I put again these two balls under the cup B." While speaking thus he puts the white one under the cup, and conjures the other, while seigning to put it in with that of the lest hand. He then announces its passage; and while he does so, raises the cup A, and introduces the black ball. Commanding then the black ball to pass under the cup A, he raises the cup B, takes in his right-hand singers the ball which is there, and shows it. "I put it again (stays he) (II), sinder this cup (conjuring it); and I show you that it is passage that the short ball, which is under this A." While telling the company that it is passaged, and the cup and the three balls upon each cup, the black one upon the middle.

25. With the three balls put at the top of the cups, and that which has been inferted under one of them in the preceding trick; to change the colour of the balls. The operator goes on with his difcourfe: " If there is any one here who knows how to play the cups and balls, he will do well to observe, that it is not pessible to do this trick by the common method, and with three balls only. However, I have no more, (/howing his hands). I take this white ball (that which is upon the cup C), and I throw it (1X.) through this cup (the same under which he left a black ball in the preceding trick). I take this black ball (with the left-hand fingers); there is nothing under this cup B, (introducing there the white ball). I throw it (IX.) through this cup B, (taking again the ball in his right-hand fingers). I take this other white ball, (with his lefthand fingers). There is nothing under this cup A, (introducing the block ball): I throw it (IX.) through the cup A, (taking it again into his right-hand fingers to conjure it). Observe that they have all changed their colonr," (covering each of them with their cups).

26. With the three balls which are left under the cups,

two white balls, and a black one that he took trick by trick from his bag; to change the fizes of the balls .- In performing this trick the operator takes away the white ball which is under the cup C with his left-hand fingers, and, raifing the cup with his right, introduces there a white ball which he took ont of his bag. The white ball which he introduces is kept in his hand with the fourth and little finger; and he raifes the cup in the fame manner as when he introduces the balls. In turning over the cup afterwards, he advances his hand to introduce this ball. These balls should be filled with horfe-hair or paper, fo that they may be very light, and make no noife. The operator then tells his company, that he makes the ball pass through the table under the same cup; and while he speaks thus, he takes the ball again in his right hand, and while putting his hand under the table, he takes a black ball out of the bag. He then takes away the ball from the cup B, introducing the black lone in its flead. He then tells the spectators, that he makes it repais through the table; and, while he tells them fo, he takes a white ball; then, while taking away that which is under the cup A, he introduces that ball, making it repais in the fame manner through the table, and at last shows them to the company, and covers them with their cups.

27. With the three balls which are under the cubs, two other black balls, and a white one that was taken trick by trick from his bag; to pass the balls from one cup into another .- " Observe well (fays the operator), that there are two white balls under these two cups A and C, and a black one under this (raifing the cups). I cover again these three balls (covering each of them with a cup). I make to pass out through the table the white ball which is under the cup C." Here he takes a white ball from his bag; and in order not to fail, the black and white balls should be in separate pockets. Having taken out the ball, he puts the first into his bag, telling the company that there is now nothing under the cup C; and while he fays fo, he raifes it, holding the ball with his little finger, proceeding in his difcourfe as follows. " I take away this ball (that which is under the cup A), and I pass it through the table under the cup C (taking a black ball from his bag.") While the paffage of this ball is announced, he raifes the cup C to take it away and show it; and introducing there this black ball, " I put again (fays he) this other white ball into my bag, and I command the black one which is under the cup B to pass under this. It is no longer under this cup :" and while he favs fo. he raifes the cup B, in supporting with his little finger the ball which remains there. Announcing its passage, he raises the cup C and shows the ball; taking it afterwards into the left-hand, throws it into the air, returning it into his right hand, and feigning to throw it into the air a second time, he lets it fall into his bag; catting his eyes upwards and downwards as if he faw it fall upon the cup B; he raifes this cup, and shows it to the spectators, as the former, passed through the cup.

SECT. II. Performances with the Cards.

Previous to the performances with cards, it will be neceffary to explain the method of making the pafs; that is, bringing a certain number of cards from the bottom of the pack to the top; as many of these performances depend on that maneuver.

1. Hold the pack of cards in your right hand, fo that of making the palm of your hand may be under the cards: place the pack. the thumb of that hand on one fide of the pack, the firfl, second, and third fingers on the other fide, and your little finger between those cards that are to be brought to the top and the rest of the pack. Then place your left hand over the cards, in such a manner that the thumb may be at C (fig. 20, 21.), the fore-CLXYL

finger at A, and the other fingers at B.

The hands and the two parts of the cards being thus
difpofed, you draw off the lower cards confined by
the little finger and the other parts of the right hand,
and place them, with an imperceptible motion, on the
top of the pack.

It is quite necessary, before you attempt any of the experiments that depend on making the pass, that you can perform it so dexterously that the eye cannot diftinguish the motion of your hand; otherwise, instead of deceiving others, you will expose yourself. It is also proper that the cards make no noise, as that will occasion suspice. This desterity is not to be attained without some practice,

There is a method of preparing a pack of cards, by

inferting one or more that are a small matter longer or those on the top, let the other two be the bottomwider than the relt; which preparation will be necesfary in feveral of the following experiments.

The card of

2. Have a pack in which there is a long card; open divination, the pack at that part where the long card is, and prefent the pack to a person in such a manner that he will naturally draw that card. He is then to put it into any part of the pack, and shuffle the cards. You take the pack, and offer the same card in like manner to a fecond or third person; observing, however, that they do not fland near enough to fee the card each other draws. You then draw feveral cards yourfelf, among which is the long card, and ask each of the parties if his card be among those cards, and he will naturally fay Yes, as they have all drawn the fame card. You then shuffle all the cards together, and cutting them at the long card, you hold it before the first person, so that the others may not fee it, and tell him that is his card. You then put it again in the pack, and shuffling them a fecond time, you cut again at the fame card, and hold it in like manner to the fecond person, and fo of the reft (A).

If the first person should not draw the long card, each of the parties must draw different cards; when, cutting the pack at the long card, you put those they have drawn over it, and feeming to shuffle the cards indiferiminately, you cut them again at the long card, and show one of them his card. You then shuffle and cut again, in the same manner, and show another perfon his card, and fo on: remembering, that the card drawn by the last person is the first next the long card;

and fo of the others,

This experiment may be performed without the long card, in the following manner. Let a person draw any card whatever, and replace it in the pack: you then make the pass, and bring that card to the top of the pack, and shuffle them without losing sight of that card. You then offer that card to a fecond person, that he may draw it, and put it in the middle of the pack. You make the pass and shuffle the cards a fecond time in the fame manner, and offer the card to a third person, and so again to a fourth or fifth, as is more fully explained further on.

The four ted cards.

3. You let a person draw any four cards from the confedera- pack, and tell him to think on one of them. When he returns you the four cards, you dexteroufly place two of them under the pack and two on the top. Under those at the bottom you place four cards of any fort: and then, taking eight or ten from the bottom-cards, you spread them on the table, and ask the person if the card he fixed on be among them. If he fay No, you are fure it is one of the two cards on the top. then pass those two cards to the bottom, and drawing off the lowest of them, you ask him if that is not his card. If he again fay No, you take that card up, and bid him draw his card from the bottom of the pack.

If the person say his card is among those you first drew from the bottom, you must dexterously take up the four cards that you put under them, and, placing

cards of the pack, which you are to draw in the manner before described.

4. AFTER a card has been drawn, you place it under Divination the long card, and by shuffling them dexterously you by the bring it to top of the pack. Then lay, or throw, the sword pack on the ground, observing where the top card lies. A handkerchief is then bound over your eyes, in fuch a manner however that you can fee the ground, which may be easily done. A sword is then put into your hand, with which you touch feveral of the cards, feemingly in great doubt, but never lofing fight of the topcard, in which at last you fix the point of the fword, and prefent it to him who drew it. Two or three cards may be discovered in the same manner, that is, by placing them under the long card, and then bring-

ing them to the top of the pack.

5. You must have in the pack two cards of the same The transfort, suppose the king of spades. One of these is to be mutable placed next the bottom-card, which may be the feven cards of hearts, or any other card. The other is to be placed at top. You then shuffle the cards, without difplacing those three cards, and show a person that the bottom-card is the feven of hearts. Then drawing that card privately afide with your finger, which you have wetted for that purpofe, you take the king of spades from the bottom, which the person supposes to be the feven of hearts, and lay it on the table, telling him to cover it with his hand. You then shuffle the cards again, without displacing the first and last card, and paffing the other king of spades at the top to the bottom, you flow it to another person. You then draw that privately away; and taking the bottom-card, which will then be the feven of hearts, you lay that on the table, and tell the fecond person, who believes it to be the king of spades, to cover it with his hand.

You then command the feven of hearts, which is supposed to be under the hand of the first person, to change into the king of fpades; and the king of fpades. which is supposed to be under the hand of the second person, to change into the seven of hearts; and when the two parties take their hands off, and turn up the cards, they will fee, to their no fmall aftonishment, after having fo carefully observed the bottom-cards, that

your commands are punctually obeyed.

6. TAKE a card, the fame as your long card, and The inrolling it up very close, put it in an egg, by making comprea hole as finall as possible, and which you are to fill transpoup carefully with white wax. You then offer the long fition. card to be drawn; and when it is replaced in the pack von shuffle the cards several times, giving the egg to the person who drew the card, and, while he is breaking it, you privately withdraw the long card, that it may appear, upon examining the cards, to have gone from the pack into the egg. This experiment may be rendered more furprifing by having feveral eggs, in each of which is placed a card of the same fort, and then giving the person the liberty to choose which egg he thinks fit.

5 D 2

⁽a) There is frequently exhibited another experiment, fimilar to this, which is by making a person draw the long card; then giving him the pack, you tell him to place his card where he pleases and shuffle them, and you will then name his card or cut the pack where it is. You may also tell him to put the pack in his pocket, and you will draw the card; which you may eafily do by the touch.

having, as most public performers have, a confederate, who is previously to know the egg in which the card is placed; for you may then break the other eggs, and show that the only one that contains a card is that in which you directed it to be.

To name feveral cards that two perfons

7. DIVIDE a piquet pack of cards into two parts by a long card. Let the first part contain a quint to a king in clubs and fpades, the four-eighths, the ten of have drawn diamonds, and ten of hearts; and let the other part contain the two quart majors in hearts and diamonds,

the four fevens, and the four nines (B).

Then shuffle the cards, but observe not to displace any of those cards of the last part which are under the long card. You then cut at that card, and leave the pack in two parts. Next, prefent the first of those parts to a person, and tell him to draw two or three cards, and place the remainder on the table. You present the second parcel in like manner to another. Then having dexterously placed the cards drawn by the first person in the second parcel and those drawn by the second person in the first parcel, you shuffly the cards, observing to displace none but the upper cards. Then spreading the cards on the table, you name those that each person drew; which you will very easily do, by observing the cards that are changed in each

The twe convertible aces.

livres.

8. On the ace of spades fix, with soap, a heart, and on the ace of hearts, a fpade, in fuch a manner that they will eafily flip off.

Show thefe two aces to the company; then taking the ace of spades, you defire a person to put his foot upon it, and as you place it on the ground, draw away the spade. In like manner you place the feeming ace of hearts under the foot of another person. You then command the two cards to change their places; and that they obey your command, the two persons, on taking up their cards, will have ocular demonstration. A deception similar to this is some. times practifed with one card, suppose the ace of fpades, over which a heart is placed flightly. After showing a person the card, you let him hold one end of it, and you hold the other, and while you amuse him with discourse, you slide off the heart. Then laving the card on the table, you bid him cover it with his hand. You then knock under the table and command the heart to turn into the ace of spades. By deceptions like thefe, people of little experience and much conceit are frequently deprived of their money, and rendered ridiculous.

9. You must be prepared with two cards, like The fifteen those represented by fig. 22. and with a common ace

thousand and a five of diamonds

The five of diamonds and the two prepared cards are to be disposed as in fig. 23. and holding them in your hand, you fay, " A certain Frenchman left 15,000 livres, which are represented by these three cards, to his three sons. The two youngest agreed to leave their 5000, each of them, in the hands of the elder, that he might improve it." While you are telling this story, you lay the 5 on the table, and put the ace in its place, and at the same time artfully

This deception may be still further diversified, by change the position of the other two eards, that the three cards may appear as in fig. 24. You then refume your discourse, " The eldest brother, in tead of improving the money, loft it all by gaming, except 3000 livres, as you here fee." You then lay the ace on the table, and, taking up the 5, continue your flory: " The eldeft, forry for having loft the money, went to the East Indies with these 3000, and brought back 15,000." You then show the cards in the same posttion as at first, in fig. 22.

To render this deception agreeable, it must be performed with dexterity, and should not be repeated. but the cards immediately put in the pocket; and you should have five common cards in your pocket, ready to flow, if any one flould defire to fee them.

10 Take a parcel of cards, suppose 40, among To tell the which infert two long cards: let the first be, for ex-number of ample, the 15th and the other the 26th, from the card by top. Seem to shuffle the cards, and then cutting them then weight at the first long card, poise those you have cut off in your hand, and fay, "there should be here 15 cards." Cut them again at the fecond long card, and fay, There are here only, 11 cards." Then poining the remainder, you fay, "here are 14 cards"

11. Several different cards being shown to different To name persons, that each of them may fix on one of those cards; several to name that on which each perfon has fixed. - There must cards on which difbe as many different cards shown to each person as ferent certhere are persons to choose: therefore, suppose there sons have are three perions, then to each of them you must show fixed. three cards; and telling the first person to retain one in his memory, you lay those three cards down, and fhow three others to the fecond person, and so to the third. You then take up the first person's cards, and lay them down one by one, separately, with their faces upward. You next place the fecond person's card over the first, and in like manner the third person's card over the fecond's; fo that in each parcel there will be one card belonging to each perfon. You then alk each of them in which parcel his card is; and when you know that, you immediately know which card it is; for the first person's card will always be the first, the fecond person's the second, and the third person's the third, in that parcel where they each fay his card is.

I'his experiment may be performed with a fingle person, by letting him fix on three, four, or more cards. In this case you must show him as many parcels as he is to choose cards, and every parcel must confiit of that number, out of which he must fix on one; and you then proceed as before, he telling you the parcel that contains each of his cards.

12. MAKE a ring large enough to go on the fecond The magic or third finger (fig. 15.), in which let there be fet aringlarge transparent itone, to the bottom of which must be fixed a fmall piece of black filk, that may be either drawn afide or expanded by turning the flone round. Under the filk is to be the figure of a fmall

Then make a person draw the same fort of card as that at the bottom of the ring, and tell him to burn it in the candle. Having first shown him the ring, you

take part of the burnt card, and reducing it to powder, you rub the stone with it, and at the same time turn it artfully about, so that the small card at bottom

may come in view. she magic

-ta-caddy.

13. To change one card into another .- Provide a mahogany tea caddy about four or five inches deep, and long enough to admit a common fixed playing card: (fee fig. 9). This caddy must be furnished with a CLXVII moving falfe bottom B, moveable upon hinges on the infide edge of the front A. This bottom may be made of brafs, tin, or lead; and the falle bottom mult be so exactly fitted, that it cannot, from a slight view, be distinguished from the other. The inside of both caddy and false bottom ought to be lined with black or other dark-coloured cloth or velvet, fo that it may not make any noise in falling down. It would be proper that the false bottom should rife with a fpring towards the front, and it must be kept tight with a brass fpring-catch (a, fig. 10.) fcrewed to the left file of the box near the top, and which is hid by the cloth covering. The end of this spring projects a little into the front. It is driven back, to let go the false bottom, by means of a small bent wire bb let into the front of the caddy; and this pin is moved by the bolt c, which, when the box is locked, shoots out against it, by reafon of the fpring being driven in ; by which means the bottom fprings down, and covers the card placed in the box.

Before you attempt to show any trick with this caddy, a card must be placed in the inside between the front A and the false bottom B, springing up the bottom afterwards against the front; after which it is ready for use, and shown openly to the company without any danger of a difcovery.

Two persons may now be defired to draw two different cards from a pack, one of which must be the fame with the one concealed in the caddy. Taking this card from the person who drew it, you put it in the pack, pretend to shuffle it, but keep the card ei ther uppermost or undermost, so that you can easily find it afterwards. Defiring then the other person to come forward and put his card very attentively into the caddy, you in the mean time fecretly convey away from the pack the card drawn by the other; then, giving him the key, you defire the caddy to be locked up. After some pretended conjurations, defire him to unlock it again and take out the card; which he will find not to be his, but that drawn by his neighbour : his card being apparently vanished from the caddy, as the other is from the pack.

The two

folios.

14. Providetwo pieces of pasteboard A and B(fig. 11.) of equal dimentions, 31 inches long and three broad. magic port-Place thefe befide one another, as fhown in the figure. Take then a very fmooth filk ribbon, and put a band of it from C to E towards the edge of the pasteboard A, and another from D to F in fuch a manner as to come beyond the palleboard, and to admit of being folded over at the two ends. This must be glued on the back of the board A at the places C and D, and at the back of the board B at the places E and F. Place two other bands in a fimilar manner on the pasteboard B, turning them over on the back of the fame board at the places I and L, and at the back of A at the places G and H. Thefe two bands should fall in the infide of the pasteboard, according to the breadth

of the ribbons. The two pasteboards being now placed the one upon the other, will form a kind of port-folio, one of the fides of which will always be hinged when the other is opened. Four finall bands of the fame ribbon are to be put at the four extremities of the fides MNQR of the two pieces of pasteboard y observing that they pass below the bands already placed. Glue their ends in the fame manner as their ends at the back of the boards, ornamenting also the two fides O and P of the pasteboard B with pieces of the same ribbon; but these six last bands are of no use in the performance.

Two pieces of paper folded like the cover of a letter must now be provided, large enough to cover the two ribbons GI and HL, as well as the space contained within them. Glue one of these upon the two ribbons, and apply the other below this; to that the uppermost of these two wrappers may fall exactly over the other, inclosing and hiding the two ribbons entirely A fecond port folio fimilarly constructed is now to be provided, and both of them covered with coloured paper from the fides where the ribbons are glued and folded -The deceptions with these port-

folios are as follows.

1. Two cards, chosen at random, having been shut up in two separate places; to make them pass reciprocally from the one into the other .- The port folios being constructed in the manner above described; if you open one of them either on the one fide or on the other, one of the paper wrappers will always be visible; and thus it will naturally be supposed that there is no more but one. Having then fecretly inclosed a card in each of the wrappers of the port folios, procure a pack of cards that has but two forts, and cause two persons fairly draw two cards fimilar to the first. Prefent then a port-folio, open, to the first person who drew a card fimilar to that which was placed in the fecond, defiring him to place it in the wrapper which he finds vacant. Take back then the port folio; and, in placing it on the table, artfully turn it over : having placed likewife in the vacant wrapper of the feeond port-folio the card drawn by the fecond perfon; and putting it in the fame way upon the table, command the cards reciprocally to pais from the one port folio into the other; and open them fo that each of the perfons may take out the card which the other inferted.

2. A card being flut up in the port folio; to make it return into the pack. - To perform this, procure a pack. which has two cards of the fame kind. One of thefe is to be openly drawn, and the perfon who has done fo mult be told to shut it up under the wrapper of one of the port folios; and inform him that you will make it return into the pack. Give him the port-folio to blow upon; and on opening it, prefent him with the empty wrapper, to show him that his card is not there; after which, prefenting him with the pack, he will find there the other card, which he will naturally imagine to be the one he put into the wrapper.

3. To make an answer appear to a question secretly written. Transcribe on different cards a certain number of queflions, and on others the fame questions with their anfwers; taking care to have the hand writing as much alike as possible, so that no difference can easily, be perceived. The fame caution mult be observed with regard to the cards themselves; which, for that reason,

ought to be plain ones. Having written with a pen- and let the divisions a and d be wide enough to adcil at the bottom of the first questions their corresponding answers, thut up one of them secretly in the portfolio; and prefenting them to any person, let him draw as by chance that which is fimilar to the one thus thut up. Make him their place in the other wrapper the question which he had drawn; and telling him that you are about to write an answer even through the port-folio, take a glass, and pretend to read in it the answer to the question. Open it afterwards, so that he may take out the other card himfelf, and he will imagine it to be the one he felected.

In performing this trick, it will be proper to have a port-folio of the same kind with the two described, which opens only at one fide, and which confequently has but one wrapper. This must be shown to such as feem to be too inquisitive, and will be of use to prevent them from entertaining any idea that the folio opens upon both fides. The former must therefore be immediately put into the pocket, in order to give an opportunity of drawing out the other in case the port-

folio should be asked for.

The card in 15. PROVIDE a mirror, either round, as A (fig. 18.), the mirror. or oval, the frame of which must be at least as wide as CCLXVI. a card. The glass in the middle muit be made to move in the two grooves CD and EF, and fo much of the quickfilver must be scraped off as is equal to the fize of a common card. You will observe that the glass must likewise be wider than the distance between the frame by at least the width of a card.

Then paste over the part where the quickfilver is rubbed off a piece of pasteboard, on which is a card that must exactly sit the space, which must at first be

placed behind the frame.

This mirror must be placed against a partition, through which is to go two ftrings, by which an affiftant in the adjoining room can eafily move the glass in the grooves, and confequently make the card ap-

pear or disappear at pleasure (-c).

Matters being thus prepared, you contrive to make a person draw the same fort of card with that fixed to the mirror, and place it in the middle of the pack : you then make the pass, and bring it to the bottom; you then direct the person to look for his card in the mirror, when the confederate behind the partition is to draw it flowly forward, and it will appear as if placed between the glass and the quickfilver. While the glass is drawing forward, you slide off the card from the bottom of the pack, and convey it away:

The card fixed to the mirror may easily be changed each time the experiment is performed. This experiment may also be made with a prior that has a glass before it and a frame of fufficient width, by making a flit in the frame through which the card is to pais; but the effect

will not be fo striking as in the mirror.

The marvellous vale.

16. PLACE a vafe of wood or patteboard A B (fig. 10.) on a bracket L, fixed to the partition M. Let the infide of this vafe be divided into five parts, c, d, e, f, g;

mit a pack of cards, and those of e, f, g, one card

Fix a thread of filk at the point H, the other end of which passing down the division d, and over the pully I, runs along the bracket L, and goes out behind the partition M.

Take three cards from a piquet pack, and place one of them in each of the divisions e, f, g, making the filk thread or line go under each of them. In the division c, put the pack of cards from which you have taken the three cards that are in the other divifions.

Then take another page of cards, at the top of which are to be three cards the same fort with those in the three small divisions; and making the pass, bring them to the middle of the pace and let them be drawn by three different persons. In give them all the cards to shuffle; after which place the pack in the division d, and tell the parties they shall see the three cards they drew come, at their command, feparately out of the vafe.

An affittant behind the partition then drawing the line with a gentle and equal motion, the three cards will gradually rife out of the vafe. Then take the cards out of the division c, and show that those three

cards are gone from the pack. The vafe must be placed so high that the inside cannot be feen by the company. You may perform this experiment also without an affiltant, by fixing a weight to the end of the filk line, which is to be placed on a support, and let down at pleasure by means of a

fpring in the partition. 17. LET a small perspective glass be made, that is The diviwide enough, at the end where the object-glass is pla. nating perfpective.

ced, to hold a table fimilar to the following.

1.131 10..132 19.133 2.231 11..232 20.233 21.333 3.331 12..332 -4. IZI 13. 122 22.123 5.22 I 14..222 23.223 6.321 15..322 24,323 16..112 25.113 7.111 8.211 17..212 26.213 18..312 27.313

Take a pack of cards that confifts of 27 only, and giving them to a person, defire him to fix on any one, then shuffle them, and give the pack to you. Place the 27 cards in three heaps, by laying down one alternately on each heap; but before you lay each card down, show it to the person, without seeing it yourfelf; and when the three heaps are finished, ask him at what number, from 1 to 27, he will have his card

⁽c) This experiment may be performed without an affiftant, if a table he placed against the partition, and the string from the glass be made to pass through a leg of it, and communicate with a small trigger, which you may cafily push down with your foot; and at the same time wiping the glass with your handkerchief, as if to make the card appear the more conspicuous. It may also be diversified, by having the figure of a head, fuppose that of some absent friend, in the place of the card.

The book

of fate.

appear, and in which heap it then is? Then'hook at the heap through the glaß, and if the first of the three numbers which stands against that number it is to appear at be t, put that heap at top: if the number be 2; put it in the middle; and if it be 3, put it at bottom. Then divide the cards into three heaps, in the same manner, a second and third time, and his card will

then he at the number he chole.

For example: Suppose he desire that his card shall be the 20th from the top, and the first time of making the heaps he say it is in the third heap: you then look at the table in the perspective, holding it at the

look at the table in the perspectives, holding it at the fame time over that heap, and you see that the sirst figure is 2; you therefore put that figure in the middle of the pack. The second and third times you in like manner put the heap in which he says it is, at the bottom, the number each time being 3. Then looking at the pack with your glass, as if to diffeorer which the eard was, you lay the cards down one by one, and the zoth card will be that he fixed on.

You may show the person his card in the same manner, without asking him at what number it shall appear,

by fixing on any number yourfelf.

The foregoing experiments with the cards will be found fufficient to explain most others of a fimilar nature that have or may be made: the number of which is very great. To perform those we have deferibed requires no great practice; the two principal points are, the making the pass in a dexterous manner, and a certain address by which you influence a person to draw the eard you present. Those that are performed by the long card are in general the most easy, but they are confined to a pack of cards that is ready prepared; whereas those which depend on making the pass, may be performed why han ppack that is offered.

Sect. III. Experiments with Sympathetic Inks. [See Sympathetic INK.]

EXPERIMENTS with CLASS I.

1. Make a book of 70 or 80 leaves; and in the cover at the end of it let there be a case, which opens next the binding that it be not perceived.

At the top of each right hand page write any question you pleafe; and at the beginning of the book let there be a table of all those questions, with the number of the page where each is contained. Then write with common ink, on separate papers, each about half the fize of the pages in the book, the same questions that are in the book, and under each of them write, with the ink made of the impregnation of faturn, or the dissolution of bifunds, the answer.

Soak a double paper in the vivifying liquor made of quick, lime and orpiment, or the phlogiston of the liver of sulpher, and place it, just before you make the experiment, in the case that is in the cover of the book.

Then deliver fome of the papers on which the quefitions are wrote to the company; and, after they have chosen such as they would have answered, they put them in those leaves where the same questions are contained, and, shutting the book for a few minutes, the

fulphureous spirit with which the paper in the cover of the book is imbibed, will penetrate the leaves, and make the aniwers wibbe, which will be of a brown colour, and more or less deep in proportion to the time the book has been colored (p).

2. Make a box about four inches long, and three The marwide, as AB EOL, and quite fhallow. Let it flut with vellous porninges and faften with a book; and let it have two traitings to bottoms, the loweft of wood, that draws out by a groove, and the uppermost of pasteboard. Between these two bottoms is to be placed a paper dipped in the visifying signor mentioned in the last experiment. Let there be also a board of the same size with the inside of the box, which being placed in it may-press

Then take feveral pieces of paper, of the fame fize with the infide of the box, and draw on them the figures of me and women, in different attitudes and employments, as walking, 'riding, reading, writing, &c. Thefe figures mut be drawn with a new pen, or pencil, dipped in the impregnation of Saturn.

a paper against the pasteboard bottom.

Being thus provided, and having privately placed the paper dipped in the vivifying liquor between the two bottoms, you tell a perfon you will flow him what an abfent friend of his is doing at the prefent hour. You then give him the paper adapted to the employment you intend, and tell him to write his friend's name at the bottom, that you may not change the paper. Then placing that paper next the pafleboard bottom, and putting the piece of wood over it, you flut the box. After amuling him with difcourte for three or four minutes, you take out the paper, when he will fee his friend in the employment you have affigued him.

3. LET a workman make a hand of wood, as in fig. The artist-16. fixed at the end next the elboy to the piece E, cial hands the ends of which go through the ferews CD and EF. The fore and middle ingers, and the thumb, are to be moveable at their joints. There mult go a wire through the arm, that is fixed at one end to the forefinger, and at the other to the piece E, round which it is to move: under the two joints of the two fingers are also placed two final [prings, which are to raife it up.

To the fore-finger and thumb fix two small rings, through which a pen may be put, so as not to impede their motion. Under the arm at the point I, place a small brass roller, which serves to sustain the arm.

The pedellal on which this hand is placed must be at least a foot long, if the hand be of the natural fize, and about eight inches wide. This pedellal must be hollow, and at the part ST there must be an opening about three inches long and two inches wide; the whole pedellal may be covered with a thin stuff, by which the hole will be concealed. There is to be a valve, or fort of trap door, on the inside of the pedelfal, which is to falten against the opening.

Over the hand and pedeftal place a glass frame, as in the figure: cover the hand with fine leather of flesh colour, and decorate the arm with a ruffle and cuff, which will entirely conceal the machinery.

Then take a number of cards, and write on them different questions; and on the same number of papers

⁽D) If a weight be placed upon the book, the effect will be the fooner produced. Or you may put the book in a box that will prefs it close down.

The wri-

the wall,

Magical

write, with the impregnation of lead, the answers. Give the cards to any one, and let him choose a queflion; and you place the paper with the answer under the pen in the hand, letting him first see there is no writing on it (E). Now the pedeftal being placed against a partition, the end F is to go through it. Therefore an affiftant, upon a fignal given, turns a bandle fixed to F; and, as the piece E turns round, the wires that move the fingers and thumb are alternately lengthened and shortened, by which their joints are kept in continual motion; and the fcrew at the fame time turning gently from F towards G, gives the whole arm a motion which very much refembles that of nature (F).

The hand and pen serve here merely to affift the illusion: but if a bit of sponge, dipped in the vivifying liquor, be placed at the end of the pen, as it goes over the writing on the paper, it will make it become gradually visible, and in this case the trap door and dipped paper may be omitted (G).

DECEPTION with CLASS II.

A. TAKE several pieces of paper, of a fize that you ting against can put in any book that will go into your pocket, and write at the top of each of them a question, with common ink, and under it write the answer with the folution of gold or filver. Give any of these papers, closely wrapt up, to a person, and tell him to place it against the wall of his chamber, and keeping the door locked he will next day find the answer

wrote on it. As the gold ink will fometimes give a yellow caft to the paper, you may previously give a slight tincture of that kind to the papers you use for this purpose.

DECEPTION with CLASS III.

5. On different papers draw the figures of feveral vegetations, leaves or flowers with one of the colourless juices mentioned: then take one of the corresponding leaves or flowers, and laying it on an iron plate, over a chafing-dish of hot coals, let it burn to ashes. Put these ashes into a fieve, in which there is some very fine steelfilings, and fift them over the paper on which the flower is drawn, when they will adhere to the glutinous liquor, and form an exact representation of the figure of the leaf or flower.

DECEPTIONS WITH CLASS IV.

6 MAKE a little triangular box, each fide of which The talifman, fig. 7. is to be about five inches, and let its infide be divided into three parts. The first part A, which makes the bottom of the box, is to be covered by the fecond part B, in form of a case, and let the top C exactly cover the part B, as is expressed in the figure and the profiles.

Nº 186.

Upon the bottom of the box let there be a plate of copper, about one-twentieth of an inch thick, on which let there be a number of hieroglyphic characters contiguous to each other, and cut in different forts of metal.

On the top of the cover place a knob O, that goes through it, and to which the copper triangle Q is to be fixed occasionally, in such manner as it may go into the case B. There must be a space of one quarter of an inch between the triangle Q and the bottom of the case B; into which another plate of copper, of that thickness, may be placed.

The outfide of this talifman may be decorated with uncommon figures or characters, to give it the ap-

pearance of greater mystery. On feveral pieces of paper, of the same fize with

the infide of the talifman, write different questions in common ink, and write the answers in those different forts of fympathetic ink that appear when heated. observing that each word of the answer is to be wrote in a different ink.

Having properly heated the triangle, and placed it under the cover, you introduce the talifman, and tell any one of the company to choose one of the papers on which the questions are wrote, and place it in the talisman, and he will immediately have an answer wrote on that paper, the words of which will be of different colours, according to the different metals of which the talifman is composed. The paper being placed in the talisman, and the cover placed over it, the heat of the triangle will make the answer visible in a few moments. This experiment may be repeated if the triangle be made fufficiently hot; and two papers may be placed in the talisman at the same

This deception, when well executed, occasions a furprise that cannot be conceived by a mere descrip-

7. MAKE a wooden pedeftal AB, about ten inches The fibyle, long, eight wide, and one deep: and at one end erect fig. 5. a box C, about ten inches high, eight broad, and two and a half deep.

The top of the pedestal must slide in a groove, on which inscribe a dial M, of fix inches diameter, and which is to be divided into nineteen equal parts, in twelve of which write the names of the months, and mark the respective figns of the zodiac; and in the feven other divisions, which must be next the end B, write the days of the week, and mark the figures of the planets. Next the inner circle NO, make an opening into the box, of about one tenth of an inch. On the centre of the dial place an index that turns freely on its centre.

Within the pedeftal place a pulley P, about four inches diameter, which is to turn on an axis that is directly

(E) The paper dipped in the vivifying liquor is to be previously placed against the opening in the table, and fupported by the trap-door.

(F) This might be performed without an affiftant, by means of a trigger placed in the leg of the table, and communicating with the handles, which the operator might thrust down with his foot. Where expence is not regarded, there may be a complete figure of a man in wood, or plaster of Paris, seated by the table.

(G) You may also have a glass ink stand, with some of the vivifying liquor, into which the pen may be dipped, and it will then appear to write with common ink. The spectators should not be permitted to come very acar this machine, which may be applied to feveral other purpofes.

per part of that axis fix a bent index R, which comes out at the opening made by the inner circle (H), and passes over those seven divisions only on which are

wrote the days of the week.

Within the box C, let there be two rollers S and T, as in the figure: let that of S contain a fpring; and at the end of T let there be a pulley V, of three quarters of an inch diameter, round which goes a ftring or thread that paffes under the fmall pulley X, and is fastened to that of P: so that when the last pulley makes about one-third of a turn, that of V may make three or four turns.

There must also be a scroll of paper, about two feet long, and each end of which must be pasted to one of the rollers. In the front of the box, between the two rollers, make an aperture D, about four inches long, and one inch and a half wide: to this opening let there be a little flap or flider, by which it may be closed at

pleafure.

The apparatus being thus disposed, place the index R fucceffively against each of the divisions marked with one of the planets; and as the paper is gradually wound up the roller, mark, against that part which is at the aperture D, the name of one of the following fibyls:

The Hellespontian Artemisian Phrygian fibyl. Albunean Perfian Libvan

On each of the feven cards write a different queftion, and draw one of the feven planets. Next, take a memorandum book that contains feven leaves, and on each of them write the name of one of the foregoing fibyls; in each of the leaves place feveral pieces of paper, and on each of them write, with the fympathetic ink that does not appear till the paper is heated, different answers to the same question.

Then give a person the seven cards on which the questions are wrote, and tell him to choose one of them privately, and conceal the rest, so that it cannot possibly be known which of them he has chosen.

Next, tell him to place the index that points to the month against that in which he was born (1), and to place the index of the planets against that which is on the card he has chosen, and which is to preside over the answer: you tell him to do this privately, that no one may fee him, and after that to cover the dial with his handkerchief. Then let him open the door that is before the aperture in the box, and tell you the name of the fibyl there vifible.

You then open the memorandum-book, and taking out the papers that are in the leaf where the name of the fibyl just mentioned is wrote, you defire him to

Vol. IX. Part II.

directly under the centre of the dial; and on the up- choose any one of them he thinks proper. The talifman used in the last experiment being properly heated, is then to be introduced, when you direct the perfon to put the blank paper into it; and taking it out a few moments after, he will find the answer to his que-

> To make this operation appear the more extraordinary, it will be proper to have a small press or cupboard, at the back of which there is a door that opens into an adjoining room, by which means an affiftant having prepared the talifman, may place it in the cup-board the moment before it is wanted. This contrivance will be ufeful on many other occasions.

8. PROVIDE an urn of wood or metal about fix The magic inches high, and two and a half diameter in the wideft urn. part, and of fuch figure in other respects as you think proper (fee fig. 9.). Let there be a cylinder of copper C, (fig. 10.) of about one-eighth of an inch diameter, which is to fill a hole AB made in the urn. The top of this cylinder is to be in the top of the urn, fo that it may be easily taken out. To this urn there

must be a cover D, which fits it exactly.

On a fmall fquare piece of paper draw the figure of a flower or leaf, with that fort of fympathetic ink whose colour most resembles it. You then present several forts of flowers or leaves to a person, and defire him to choose any one of them. Then put that flower on a chafingdish of hot coals; and, taking the paper on which it is fecretly drawn, you give it to the person to examine, and then put it in the urn, having previously heated the cylinder (K). Then taking some of the ashes of the burnt flower, you strew them over the paper, after which you take it out and show the company the figure of that flower. While the flower is burning, you may sprinkle some powder over it. suppose that of saltpetre; and by that, mixed with the ashes of the flower, the company may imagine the effect is produced.

The prefs or cupboard mentioned in the preceding experiment, will be here very convenient for heating the cylinder and placing it in the urn. A fimilar deception may be performed by putting the paper in a copper vessel, that may be placed on an iron plate over the chafingdish in which the flower is burnt. But this method has not fo mysterious an appearance as the other, and in fome perfons may cause a suspicion that

the effect is produced by heat.

9. To perform this experiment, you must observe, The come that there are feveral letters which may be changed vertible into others, without any appearance of the alteration; cards. as, the a into d, the c into a, e, d, g, o, or q, the i into b, d, or l, the l into t, the o into a, d, g, or q,

the v into y, &c.

Take a parcel of cards, suppose 20, and on one of them write, with the ink of the fourth class, the word law (L), and on the other, with the fame ink, the words old woman; then holding them to the fire, they will both become visible. Now you will observe, that 5 E

(H) If the axis be made to pass through the top of the pedeftal, this opening will not be necessary.

⁽¹⁾ These months and the index are of no other use than to give the experiment an air of greater myftery

⁽x) There are some forts of sympathetic inks that require much more heat than others. (L) These letters should not be joined.

by altering the a in the word law into d, and adding o before the l, and oman after the w, it becomes old woman. Therefore, you make those alterations with the invisible ink, and let it remain so. On the rest of the cards you write any words you think fit.

Prefent the cards in fuch a manner to two perfons, that one of them shall draw the word law, and the other the words old woman. You then tell the person who drew the word law, that it shall disappear, and the words on the other card shall be wrote in its place; and that you may not change the cards, defire each of the parties to write his name on his card. Then putting the cards together, and holding them before the fire, as if to dry the names just wrote, the word law will prefently change into old woman.

This experiment may be varied by fixing on a word that may be changed into three other words, and making four persons draw the cards on which those words are wrote; and it may be further diverlified by choofing three fuch words, as that the first can be changed into the fecond, and the fecond into the third. You then tell him who drew the first word, that it shall be changed into that drawn by the fecond person; and him you tell, that his word shall be changed into that

of the third person.

10. WRITE on feveral flips of paper different que-The ornenlar letters. Rions, and fuch as may be answered by the name of fome person; for example, Who is the merriest man in the company? Answer, Mr * **. To whom will Miss * * * be married ? Answer, To Mr * * *. These questions are to be wrote in the sympathetic ink of this class, and exposed to the fire, and the anfwers wrote in the same ink, and left invisible. The papers are to be folded in form of letters, and in fuch manner that the part where the name is wrote shall be directly under the feal, and the heat of the wax will make it visible. Then give the letter to the person who requires the answer, and he will find it plainly

> A deception fimilar to this may be made with a number of blank cards, on each of which an ace of fpades is drawn with the invifible ink; then let a perfon choose any one of them, and incluse it in a lettercafe, prepared in fuch manner that the figure of the ace shall be directly under the seal, and on opening the letter it will be immediately visible.

DECEPTIONS with CLASS V.

II. HAVE a box that is divided into three parts, prehenfible after the fame manner as the talifman in the 21ft experiment, except that, inflead of being triangular, it must be of a long square (see fig. 14.) Divide its top B into two equal parts D and E, as in fig. 13. and to the part D adjust a place of copper L, about one quarter of an inch thick, and under both the plate L and the opening E place a cloth. The upper part C must

have a button by which it may be fixed on the cover B, so as to appear of one piece with it. At the bottom of the box place a piece of cloth, or other fluff, on which you may flamp certain myflerious characters, and observe that the bottom of the cover mult rest upon this cloth.

Then provide a flip of paper GH (fig. 12.) of the fame fize with the bottom of the box; and at each end of it write, with the green sympathetic ink, the name of a different card, and make fome private mark by which you can tell at which end each name is wrote (M).

Take a parcel of cards, and offer those two of them whose names are wrote on the paper to the two perfons, that they may draw them. You tell the parties to keep their cards to themselves, and you propose to make the names of those cards appear upon a flip of paper, which you put into the box. You then afk which name of the two cards shall appear first. The copper-plate being previously heated and placed in the cover, you put it over that end of the paper on which is the name required, and it will prefently appear. Then taking the paper out and flowing the name wrote, you put it in again, turning the other end to the fide of the box where the plate is, and it will in like manner become vifible.

The first name may be made to disappear at the fame time that the fecond appears, if the cloth at the end opposite to that where the plate is be made damp. 12 TAKE a print that represents winter, and trace Winter

over the proper parts of the trees, plants, and ground, changed with the green sympathetic ink t observing to make into spring. with the green sympathetic ink; observing to make fome parts deeper than others, according to their diflance. When those parts are dry, paint the other objects with their natural colours. Then put the print in a frame with a glass, and cover the back of it with

When this print is exposed to the heat of a moderate fire, or to the warm rays of the fun, all the grafe and foliage will turn to a pleating green; and if a yellow tint be given to some parts of the print, before the fympathetic ink be drawn over, this green will be of different shades; and the scene that a minute before reprefented winter, will now be changed to fpring. When this print is placed in the cold, winter will again appear, and will again be driven away by the warm rays of the fun. This alternate change of feafons may be repeated as often as you please; remembering,

a paper that is pasted over its border only.

however, as was before observed, not to make the print at any time too hot, for then a faded autumn DECEPTIONS With CLASS VII.

will for ever remain.

13. PROVIDE a number of artificial flowers, fuch as The revite rofes, jonquils, pinks, or any other you find conveni- fied bouent. These flowers must be made of white thread or quets. filk, and their leaves of parchment. Dip the roses in the red fympathetic ink, the jonquils in the yellow, the pinks in the violet, and their leaves in a folution of falt of tartar. When they are all dry, form them into fmall bouquets, which will all appear white, and may

be used in this experiment, either the day they are dipped, or feveral days after.

You take one of these bouquets, and after showing

⁽M) That there may be no suspicion of the paper being prepared, you may cut it from a whole sheet, before the company, having previously wrote the names.

writing.

green, or red.

the company that every part of it is white, you dip it in an infusion of any of the blue flowers mentioned under the article Colour-Making, no 12, and, drawing it prefently out, all the flowers and leaves will appear in their natural colours (N).

14. WRITE on a paper, with the violet liquor, as The tranmany letters or words as you pleafe; and ask any perfcolorated fon whether he will have that writing turn to vellow.

> Have a sponge with three sides that you can readily distinguish, and dip each of its sides in one of the three sympathetic inks. Draw the side of the sponge that corresponds to the colour the person has chose, over the writing once only; and it will directly change to the colour required (o).

Sect. III. Miscellaneous Performances.

15. A person having an even number of counters in To tell adds one hand, and an odd number in the other, to tell in which or evens. band the odd or even number is. LET the person multiply the number in his right-hand by an odd number, and the number in his left-hand by an even number, and tell you if the fum of the products added together be odd or even. If it be even, the even number is in the right hand; but if it be odd, the even number is in the left hand.

	Example.
1. Number in the 3 18 right hand Multipliers 3	In the left 7
1 0	
54	
Their fum 68	
2. Number in the 7	In the left 18
Multipliers 3	2
-	Appropriate relates
36	36
Their fram gr	

16. To tell, by the dial of a watch, at what hour any what hour person intends to rife. LET the person set the hand of any person the dial to any hour he pleases, and tell you what hour intends to that is; and to the number of that hour you add, in your mind, 12. Then tell him to count privately the number of that amount upon the dial, beginning with the next hour to that on which he proposes to rife, and counting backwards, first reckoning the number of the hour at which he has placed the hand. An ex-

ample will make this plain. Suppose the hour at which he intends to rife be 8, and that he has placed the hand at 5. You add 12 to 5, and tell him to count 17 on the dial, first reckoning 5, the hour at which the index stands, and counting backwards from the hour at which he intends to rife; and the number 17 will necessarily end at 8. which shows that to be the hour he chose.

That the hour at which the counting ends must be that on which he proposed to rife, will be evident on a little reflection; for if he had began at that hour and counted 12, he would necessarily have come to it again; and calling the number 17, by adding 5 to it, only ferves to difguife the matter, but can make no fort of difference in the counting.

17. If the number 11 be multiplied by any one of The macithe nine digits, the two figures of the product will al-cal century, ways be fimilar. As follows:

Place a parcel of counters on a table, and propose to any one to add, alternately, a certain number of those counters, till they amount to 100, but never to add more than 10 at a time. You tell him, moreover, that, if you stake first, he shall never make the even century, but you will. In order to which, you must first stake 1, and remembering the order of the above feries, 11, 22, 33, &c. you constantly add, to what he stakes, as many as will make one more than the numbers of that feries, that is, as will make 12, 23, 34, &c. till you come to 89, after which the other party cannot make the century himfelf, nor prevent you from making it.

If the other party has no knowledge of numbers, you may stake any other number first, under ten, provided you take care to fecure fome one of the last terms, as 56, 67, 78, &c.

This deception may be performed with other numbers; and in order to fucceed, you must divide the number to be attained by a number that has one digit more than what you can stake each time, and the remainder will be the number you must first stake. Observe, that, to be sure of success, there must be always a remainder. Suppose, for example, the number to be attained is 52, making use of a pack of cards instead of counters, and that you are never to add more than 6; then divide 52 by the next number above 6, that is, by 7, and the remainder, which is 3. will be the number you must stake first; and whatever the other stakes, you must add as much to it as will make it equal to the number by which you divided, that is, 7. Therefore, if his first stake be 1, you must ftake 6, &c. fo that your fecond ftake will make the heap 10, your third flake will make it 17, and fo on, till you come to 45, when, as he cannot stake more than 6, you must make the number 52.

In this, as in the former case, if the other person has no knowledge of numbers, you may stake any number first under 7; or you may let him stake first, only taking care to fecure either of the numbers 10, 17, 24, 31, &c. after which he cannot make 52, if

⁽N) The liquor should be put in a fort of jar with a narrow neck, that it may not be seen by the company; and you should draw the flowers gently out, that the liquor may drop if thin, and they may have time to acquire their colours.

⁽o) The sponge should be well cleaned immediately after the experiment.

Sect. III.

To tell

18. A person privately fixing on any number, to tell him

what num. that number. AFTER the person has fixed on a number, ber a per- bid him double it and add 4 to that fum, then multiply fon private- the whole by 5; to the product let him add 12, and multiply the amount by 10. From the fum of the whole let him deduct 220, and tell you the remainder; from which if you cut off the two last figures, the number that remains will be that fixed on.

Example.
Let the number chosen be
Which doubled is 1.
And 4 added to it, makes 1
Which multiplied by 5, gives 9
To which 12 being added, it is - 10
That multiplied by 10, makes 102
From which deducting 320, the remainder is 70
And by firiking off the two cyphers, it becomes
the original number

To tell the number of ing them.

10. Three dice being thrown on a table, to tell the number of each of them, and the order in which they stand. LET the person who has thrown the dice double the thrown up number of that next his left hand, and add 5 to that by 3 dice, fum; then multiply the amount by 5, and to the pro-without fee-duct add the number of the middle die; then let the whole be multiplied by 10, and to that product add the number of the third die. From the total let there be fubtracted 250, and the figures of the number that remains will answer to the points of the three dice as they stand on the table.

Example. Suppose the points of the three dice thrown on the table to be 4, 6, and 2, Then the double of the first die will be . To which add

That fum multiplied by 5 will be To which add the number of the middle die 71 And multiply the fum by 10

710 To that product add the number of the third die

From the total 712 Subtract 250 And the three remaining figures 264

will answer to the numbers on the dice, and show the order in which they fland.

Totell on what finprivately put.

20. Some person in company having put a ring privately on one of his fingers; to name the person, the hand, the ger, joint, finger, and the joint, on which it is placed. LET a third &c. a ring person double the number of the order in which he flands who has the ring, and add 5 to that number; then multiply that fum by 5, and to the product add 10. Let him next add 1 to the last number if the ring be on the right hand, and 2 if on the left, and multiply the whole by 10: to this product he must add the number of the finger (counting the thumb as the first finger), and multiply the whole again by 10. Let

you constantly add as many to his stake as will make him then add the number of the joint; and, lastly, to the whole join 35.

He is then to tell you the amount of the whole, from which you are to subtract 3535, and the remainder will confift of four Agures, the first of which will exprefs the rank in which the person stands, the second the hand (the number I fignitying the right hand, and 2 the left), the third number the finger, and the fourth the joint.

Example. Suppose the person who stands the third in order has put the ring upon the fecond joint of the thumb of his left hand; then

The double of the rank of the third person is To which add Multiply the fum by 5 To which add And the number of the left hand 2

Which being multiplied by 10 To which add the number of the thumb 671 And multiply again by

Then add the number of the joint And lastly the number 35 6747 From which deducting

The remainder is Of which, as we have faid, the 3 denotes the third person, the 2 the left hand, the t the thumb, and the last 2 the second joint.

21. Cover the outfide of a small memorandum book The burnt with black paper, and in one of its infide covers make writing rea flap, to open fecretly, and observe there must be no-stored. thing over the flap but the black paper that covers the book.

Mix foot with black or brown foap, with which rub the fide of the black paper next the flap; then wipe it quite clean, fo that a white paper pressed against it will not receive any mark.

Provide a black-lead pencil that will not mark without preffing hard on the paper. Have likewise afmall box, about the fize of the memorandum-book, and that opens on both fides, but on one of them by a private method. Give a person the pencil, and a slip of thin paper, on which he is to write what he thinks proper: you prefent him the memorandum-book at the fame time, that he may not write on the bare board. You tell him to keep what he writes to himself, and direct him to burn it on an iron plate laid on a chafingdish of coals, and give you the ashes. You then go into another room to fetch your magic box above described, and take with you the memorandum-book.

Having previously placed a paper under the flap in the cover of the book, when he presses hard with the

of the fluff rubbed on the black paper, will appear on that under the flap. You therefore take it out, and

put it into one fide of the box. You then return to the other room, and teking a

flip of blank paper, you put it into the other fide of the box, firewing the after of the burnt paper over it. Then shaking the box for a few moments, and at the same time turning it dexteroully over, you open the other fide, and show the person the paper you first put in, the writing on which he will readily acknowledge to

The tranfopofable pieces.

trative

quinea.

22. TAKE two guineas and two shillings, and grind part of them away, on one fide only, fo that they may be but of half the common thickness; and observe that they must be quite thin at the edge: then rivet a guinea and a shilling together. Lay one of these double pieces, with the shilling upwards, on the palm of your hand, at the bottom of your three first fingers; and lay the other piece, with the guinea upward, in like manuer, in the other hand. Let the company take notice in which hand is the guinea, and in which the shilling. Then as you shut your hands, you naturally turn the pieces over; and when you open them again, the shilling and the guinea will appear to have changed their places. 23. PROVIDE a round tin-box, of the fize of a large

The penefnuff-box; and in this place eight other boxes, which will go eafily into each other, and let the leaft of them be of a fize to hold a guinea. Each of these boxes should shut with a hinge : and to the least of them there must be a small lock, that is fastened with a fpring, but cannot be opened without a key: and observe that all these boxes must shut so freely, that they may be all closed at once. Place these boxes in each other, with their tops open (fee fig. 12.), in the drawer of the table on which you make your experiments; or, if you pleafe, in your pocket, in fuch a manner that they cannot be displaced.

> Then ask a person to lend you a new guinea, and defire him to mark it, that it may not be changed You take this piece in one hand, and in the other you have another of the same appearance; and putting your hand in the drawer you flip the piece that is marked into the least box, and, shutting them all at once, you take them out. Then showing the piece you have in your hand, and which the company suppose to be the fame that was marked, you pretend to make it pais through the box, and dexteroully convey it away.

You then present the box, for the spectators do not yet know there are more than one, to any perfon in company; who, when he opens it, finds another, and another, till he comes to the last, but that he cannot open without the key (fee fig. 13.) which you then give him, and retiring to a diftant part of the room, you tell him to take out the guinea himself, and see if it be that he marked.

This deception may be made more furprifing, by putting the key into the fnuff-box of one of the company; which you may do by asking him for a pinch of his fouff, and at the fame time conceal the key, which must be very fmall, among the snuff: and when the person who is to open the box asks for the key, you tell him that one of the company has it in his fnuff-

pencil, to write on the paper, every stroke, by means box. This part of the deception may likewise be performed by means of a confederate.

24. ABCD, fig. 15. reprefents a fmall wooden box The three feven or eight inches long, two and an half broad, magic picand half an inch deep; the bottom of which, tures, by means of two crofs-pieces, is divided into three CCLXVII. equal parts. EFGH reprefents the lid, which is fa fig. 14, 15. stened to the bottom by a hinge, and has in front a fmall plate fhaped like a lock, and two fmall eyes for hooks which ferve to fasten it when it is shut. ILM are three small flexible springs, flat, and about 3 inch long. NOP are three wooden tablets of the same size, upon which are marked the figures 3, 4, and 5. The tablets are of different thicknesses, and the difference is fo fmall as not to be perceived by the eye. The outfide of the box is covered with shagreen or morocco leather, and on the infide with filk taffety; these coverings being indispensibly necessary to hide the three small fprings abovementioned. Fig. 14. shows the two hinges E and F bent close to the top of the lid ABCD; the piece of brass G, similar to a lock, being also curved to the lid. A finall brafs flud is rivetted upon the end of each of these springs inserted into the lid. and paffes through the curved part of each of the hinges and the lock; fo that on the outfide they appear as the heads of small pins which fasten them upon the lid. These small studs will be elevated more or less according to the thicknesses of the tablets, that may be shut up in each of the partitions in which they may be found placed; fo that the tablet N elevates them more than the tablet O, and the latter less than P; though these elevations are but barely sensible to the fight or touch, and that by a perfon accultomed. to look at or handle them. Thus it may be easily known in whatever order the tablets are placed, however carefully thut up; and confequently the numbers named as inclosed.

Give now the box to any indifferent person, leave him at liberty to form with the tablets any number he pleases, defiring him to return the box well shut up; then taking the box, and determining by the touch, or rather by the eye, what order the tablets are in, it will be very furprifing to hear you declare the number without feeing it.

N. B. It will fill be equally possible to discover the number, though the tablets should be returned with the bottom upwards, or even though one should be withdrawn in order to defeat your defign; particularly if care has been taken to make the fluds remain even with the plates when a number is omitted.

25. To discover any particular counter which has been The numefecretly placed within a box that turns upon it .- This table, rical table. which is made of wood, is represented by A, fig. 16. It is of an hexagonal shape, and about three or four inches diameter. For the fake of neatness in appearance, a proportionably fized pillar with a foot is fixed to it. Round a centre there turns a fmall round box B of about 3 inch diameter in the infide, the lid of which takes off at B. At the bottom of this box, near the circumference in the infide, is fixed a brafe pin to fit a hole made in a flat ivory counter shown. at b, fig. 17. The pin and counter are reprefented in fig. 18. which is a flat view of fig. 16 with the lid of the box B taken off. Opposite to the pin &.

in the same figure, D represents a fine dot designed as a fecret mark on the outfide of the box, which ferves always as a guide to the number of the counter privately placed in the infide of the box, as is afterwards particularly explained. Upon one of the corners of the table is an ivory mark C, fig. 16. and 18. which ferves to place the fpot a upon the counters in its proper position. See fig. 17. There are 12 counters fitted to the box B, marked 10, 20, &c. as far as 120, on the middle of each. On each of these counters is the hole b, fig. 17. and 18. which goes over the pin in the bottom of the box; and on one fide of this hole a red or black foot is placed in the following manner. When no 10 is put into the box, the spot must be so far to the left hand of the hole, that when it is brought to the mark C, fig. 18. the hole b will be opposite to the side marked 1. When no 20 is put in, the fpot being brought to the mark C will carry the hole to the corner marked 2. When no 30 is put in, and the fpot brought opposite to C, the hole will be brought against the side marked 3, as is shown in the figure, and so on for the rest. Therefore, as opposite to the brass pin, or hole in the counter on the outfide of the box B, there is a fecret mark D already mentioned, this must ferve as an index to the number contained in the box, according as it is opposite to a fide or corner of the table.

Give now the table with the box and the 12 counters to any person, and defire him to put one of the counters fecretly into the box, keeping the reft to himself; and, after having placed the hole over the pin in the box, to place particularly, by turning the box round, the fpot a against the mark C on the table. Let him then cover the box, give you the table, and keep the counters to himself. Observe then privately what fide or corner the fecret outside mark D stands against,

The magic

well

reckon the tens accordingly, and tell him the num-26. To draw out of the well with a bucket any one of four liquers which have been previoully mixed and put into it .- Provide two tin cylinders of feven or eight inches height; the diameter of the largest, represented by AB fig. 19. to be four inches, and that of the leaft, CD, two inches. Place the fmall one within the larger, and connect them together by foldering to them four tin partitions, making the equal spaces e, f, g, b. Turn a piece of wood three inches thick, hollow withinfide, and lined with tin, of which a fection is given, fig. 20. Into this the exterior cylinder should be closely fitted at a and b. Another circle of wood (of which a fection is given fig. 21.), hollowed at a, b, and c, is also to be procured, and which may cover exactly the space between the two cylinders; and, laftly, let the whole be confiructed in fuch a manner, that when these three separate pieces are placed together, they may represent a well, as in fig. 22. The two hafs or wooden pillars AA, with the axis and handle C, ferve to let down and draw up a fmall glass bucket B, an inch and an half in diameter. Make also four tin refervoirs of the fame height with the cylinder, and fo shaped as to fill the four spaces e, f, g, h, (fig. 19.) which must be well closed at their extremities B and C. On the top of each make a fmall hole about the tenth part of an inch diameter, and folder at the base C a small tube D, the end of which should be bent towards the inside

of the well when the refervoir is placed in it. Solder on the top of each refervoir a fmall fpring lever and prop ABDE, fig. 23. This fpring will ferve always to press the end of the lever D down upon the hole at the top of the refervoir B; and in order to cover it more perfectly, a fmall piece of leather is to be glued on to the end of the lever D. Lattly, a small peg or flud C is placed at the end of each of the levers, and which must be close to the under part of the wooden circle which covers the refervoirs. To conceal thefe fluds, and at the fame time to be able to prefs upon them with the fingers, circular apertures, as shown in fig. 21. must be made in the piece of wood, the top covered with a piece of vellum, and the whole neatly painted with oil colour.

If now you plunge one of these reservoirs perpendicularly into any liquor, in preffing on the flud, fo as to uncover the hole at the top, it will be filled with the liquor in proportion to the depth to which it is immerged; and as long as the lever continues to prefs upon the hole by means of the spring, the liquor cannot run out for want of air, though it will do fo the moment the flud is preffed upon and the air admitted. If the refervoir is properly placed, then the liquor will flow out of it into the glass-bucket when let down

to a proper depth.

Fill now the four refervoirs with the four different liquors; putting them in their places, and covering them with the circular top. Take a quantity of the fame liquors, mix them well together, and pour the whole into the well; after which you may draw out any one which the company defires, by letting down the bucket, and preffing fecretly upon the flud belonging to the refervoir which contains it, and which will thus discharge the liquor it contains-

27. PROVIDE a small tin mortar, that is double, as The refuseign A (fig. 8.), whose bottom B turns round on an axis, tated flowby means of a fpring which communicates with the er. piece C. There must be a hollow space under the CCLXVIt false bottom. To the under side of the bottom fasten, by a thread of fine filk, a flower, with its stalk and leaves.

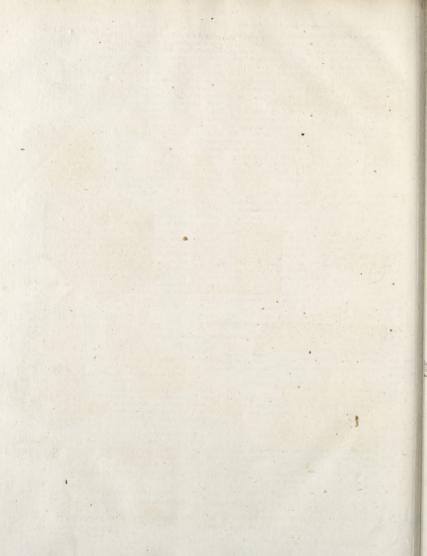

Then take a flower that exactly refembles the otherand plucking it from the flalk, and all the leaves from each other, put them into the mortar, and pound them with a fmall peftle; after which you show the mortar to the company, that they may fee the parts are all bruised.

Then taking the mortar up in your hands, you hold it over the flame of a lamp or candle, by whose warmth the flower is supposed to be restored; and at the same time preffing the piece at C, the bottom will turn round, the bruifed parts descend into the space under the bottom, and the whole flower will be at top: you then put your hand into the mortar, and eafily breaking the filk thread, which may be very short as well as fine, you take the flower out and prefent it to the com-

There is an experiment fimilar to this, in which a live bird is concealed at the bottom of the mortar, and one that is dead is pounded in it; after which, by the motion of the bottom, the live bird is fet at liberty. But furely the pounding a bird in a mortar, though it be dead, must produce, in perfons of any delicacy, more difgust than entertainment.

283

28. PROCURE a tin box ABCD (fig. 1.) about eight sous oracle inches high, four wide, and two deep, and let it be fixed on the wooden fland E. On two of the infides

let there be a groove FG; and in the front an opening I, three inches wide and one high.

At the back of the box les there be a little tin-door, that opens outward, by which two wax candles M may be put in. Let the top of the box have a cover of the fame metal, in which there are feveral holes. and which may be taken off at pleasure.

Provide a double glass OP (fig. 2.) conftructed in the fame manner as that in the last experiment. On one of its fides you are to pake a black paper, the length of which is to be divided into three parts, and the breadth into fifteen; in every two of these fifteen divisions you cut out letters, which will make in the whole three answers to three questions that may be proposed. On the other side of the glass paste a very thin paper, and to the top fasten a small cord, by which they may be made to rife or defcend in the groove

Then take a flip of pasteboard RS (fig. 3.), one inch and a half wide and three inches long, which is to be divided into fifteen equal parts fimilar to those of the paper OP, and cut out spaces, as in the figure, fo that this paper, fliding horizontally before OP, will either cover or conceal the letters cut in that.

This pasteboard is to slide between two brass wires, and is to be fastened to one fide of the box, by a string that communicates with a fmall brass spring; and to the other fide, by a ffring fastened to the box by a fmall piece of wax, fo fituated that the firing may be eafily let at liberty by the heat of the candles placed

in the box. Take a parcel of cards, and write on them different questions, three of which are to correspond with the answers on the glass. Shuffle these cards, and let a person draw any one of the three questions. Then by raising the glass you bring the answer against the hole

in the front of the box. You next place the candles in the box, the heat of which will melt the wax that holds the paper RS, which being then drawn by the fpring, the answer will be visible; and in proportion as the composition between the glasses becomes diluted by the increase of the heat, the letters will become more firongly illuminated.

The letters cut in the paper may be made to answer feveral different questions, as has been explained in other experiments; and the whole parcel of cards may confift of queltions that may be answered by one or

other of the three divisions in the paper.

20. Make a tin box ABCD (fig. 4.), with a co- A flower ver M, that takes off. Let this box be supported by produced the pedeltal FGHI, of the fame metal, and on which there is a little door L. In the front of this box is to be a glass O.

In a groove, at a small distance from O, place a double glass of the same fort with that in the last experiment. Between the front and back glaffes place a fmall upright tin tube supported by the cross-piece R. Let there be also a small chasingdish placed in the pedeftal FGHI. The box is to be open behind. You privately place a flower (Q) in the tin tube R; and presenting one that resembles it to any person (R), defire him to burn it on the coals in the channg-dish.

You then strew some powder over the coals, which may be supposed to aid the ashes in producing the flower; and then put the chafingdish in the pedeltal. under the box. As the heat by degrees melts the composition between the glasses, the flower will gradually appear; but when the chafingdish is taken away, and the power of the ashes is supposed to be removed, the flower foon difappears.

For entertaining experiments, illusions, &c. of a philosophical nature, fee the articles Acoustics, CATOPTRICS, CHROMATICS, DIOPTRICS, ELECTRI-CITY, HYDROSTATICS, MAGNETISM, PYROTECHNICS.

LEG

LEG

Leger-line, . LEGER-LINE, in music, one added to the staff of Leghorn. five lines, when the afcending or descending notes run very high or low: there are fometimes many of thefe lines both above and below the staff, to the number of four or five.

LEGHORN, anciently called Liburnus Portus, but by the modern Italians Livorno, a handsome town of Italy, in the duchy of Tufcany, and a free port, about 30 miles fouth west from Florence, in the territory of Pifa. The the defect of the harbour is its being too shallow for large ships. Cosmo I. had this town in exchange for Sarzana, from the Genoese; and it is the only fea-post in the duchy. It was then but a mean unhealthy place: but is now very handsome, and wellbuilt, with broad, ftraight, parallel ftreets. It is also well fortified; but wants good water, which must be

brought from Pifa, 14 miles diffant. It is about 2 Leghorn miles in circuit, and the general form of it is square. Part of it has the convenience of canals; one of which is & miles in length, and, joining the Arno, merchandife and paffengers are thus conveyed to Pifa. The port, confifting of two havens, one for the duke's galleys, and the other for merchant thips, is furrounded with a double mole, above a mile and a half in length. and defended, together with the town, by a good citadel and 12 forts. Roman Catholics, Jews, Greeks, Armenians, Mahometans, and even the English sactory, are indulged in the public exercise of their religion: but other Protestants must be satisfied with the private. The trade carried on here is very great, and most of it passes through the hands of the Jews. Though only two piaftres, or feudi, are paid for every

(Q) This flower must not be placed so near as to make it in the least degree visible.

⁽R) You may prefent several flowers, and let the person choose any one of them. In this case, while he is burning the flower, you fetch the box from another apartment, and at the fame time put in a corresponding flower, which will make the experiment still more furprising.

duties on all provisions and commodities brought from the continent to the town are very heavy. The number of the inhabitants is faid to be about 45,000; and one third of these are Jews, who live in a particular quarter, but without any mark of diffinction, and have a fine fynagogue. They have engroffed the coral manufactory, have a confiderable trade, and poffels the chief riches of the place. The garrifon confifts of 2000 men. The walks on the ramparts are very a-greeable. There is good anchorage in the road; but thips riding there are much exposed to the weather and the Barbary corfairs. The number of English families in Leghorn are about 36; they are much fayoured by the government, and carry on a good trade. The power of the inquifition is limited to ecclefiaftical matters and Roman Catholics. There are a great many Turkish slaves here, brought in by the duke's galleys, who are often fent out on a cruize against the corfairs of Barbary. The lighthouse stands on a rock in the fea; near which is the Lazaretto, where quarantine is performed. Another fource, from which the duke draws a great revenue, is the monopoly of brandy, tobacco, and falt; but that, with the heavy duties, makes provisions dear. The Turks, who are not flaves, live in a particular quarter, near that of the Jews. The common profitutes also have a particular place affigned them, out of which they must not be feen, without leave from the commissary. The number of the rowers in the galleys, whether Turkish slaves, criminals, or volunteers, are about 2000. In the area before the darfena or inner harbour, is a fine statue of Duke Ferdinand, with four Turkish slaves, in bronze, chained to the pedeftal. The ducal palace is one of the finest structures in the town, and the ordinary residence of the governor. Leghorn is the fee of a bishop, and has a noble cathedral; but the other churches are not remarkable. E. Long. 11. o. N. Lat. 43.

LEGIO VII. GEMINA, (anc. geog.) a town or flation of that legion in the Aftures. Now Leon, capital of the province of that name in Spain. W. Long. 6. 5. Lat. 43 .- Another Legio, a town of Galilee ; from which Jerome determines the diffances of the places in Galilee; not a bare encampment, though the name might originally be owing to that circumflance; it lay 15 miles to the west of Nazareth, be-tween mount Tabor and the Mediterranean. Now thought to be Legune.

LEGION, in Roman antiquity, a body of foot which confifted of different numbers at different periods of time. The word comes from the Latin legere, to choose; because, when the legions were raised, they made choice of fuch of their youth as were most proper to bear arms.

In the time of Romulus the legion confifted of 3000 foot and 300 horse; though, after the reception of the Sabines, it was augmented to 4000. In the war with Hannibal, it was raifed to 5000, after this it lunk to 4000 or 4500; this was the number in the time of Polybius. The number of legions kept in pay together, differed according to times and occasions. During the confular flate four legions were fitted up every year, and divided betwixt the two confuls; yet we meet with the number of 16 or 18, as the fituation of Nº 180.

Leghorn bale, great or small, imported or exported, yet the affairs required. Augustus maintained a standing ar- Legion. my of 23 or 25 legions; but this number in after times Legislator. is feldom found. The different legions borrowed their names from the order in which they were raifed; hence we read of legio prima, secunda, tertia : but as there might be many prima, secunda, tertia, &c. they were furnamed from the emperors, as Augusta, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antoniana, &c. or from the provinces which had been conquered by their means, as Parthica, Scythica, Gallica, Arabica, &c. or from the deities under whose protection the commanders had particularly placed themselves, as Minervia, Apollinaris, &c. or from the region where they were quartered, as Cretenfis, Cyrenaica, Britannica, &c. or from particular accidents, as adjutrix, martia, fulmivatrix, rapax, vierix.

Each legion was divided into 10 cohorts, each cohort into 10 companies, and each company into two centuries. The chief commander of the legion was

called legatus, i. e. lieutenant.

The ftandards borne by the legions were various; at first, the standard was a wolf, in honour of Romulus's nurse; afterwards an hog, which animal was usually facrificed at the conclusion of a treaty, to indicate that war is undertaken with a view to peace; fometimes a minotaur, to remind the general of his duty of fecrecy, of which the labyrinth was an emblem, and confequently the minotaur; a horse was also borne, also a boar; and Marius, we are told, was the first who changed all these for the eagle.

LEGISLATOR, a lawgiver, or person who establiffes the polity and laws of a ftate. Such was Mofes, among the Jews; Lycurgus, among the Lacede-

monians, &c. See MosAIC Law.

The first laws amongst the Athenians seem to have been those of Theseus; for what we can find earlier than this period is involved in fable. After Thefeus came Draco the Archon, whose laws were faid, for their feverity, to have been written with blood: by his laws every offence was punished with death; fo that stealing an apple, and betraying their country, were treated as equal crimes. These laws were afterwards repealed by Solon, except fuch as related to murder: By way of distinction, Draco's laws were called Θισμοι, and Solon's Nouse. The laws of Solon were in a great measure suspended during the usurpation of Pisistratus; but, after the expulsion of his family, were revived with fome additions by Clifthenes. After this, the form of government was again changed, first by the four hundred, and afterwards by the thirty tyrants; but thefe ftorms being over, the ancient laws were again reftored in the Archonship of Euclides, and others established at the instance of Diocles, Aristophon, and, last of all, of Demetrius the Phalerian. This is a short sketch of the history of the Athenian legislation, before that state submitted to the Roman yoke. But many laws were enacted by the fuffrages of the people on particular exigencies; the decrees of the fenate continued to have the force of laws no longer than a year. If a new law was to be proposed to the affembly, it was neceffary to write it upon a white tablet, and fix it up fome days before the meeting, left their judgment should be caught by surprise. The laws were carefully revifed every year; and if any of them, from a change of circumstances, were found unfuitable or pre-

Legitima- prejudicial, they were repealed: This was called ηπιχειροίονια των νομων, because the fuffrages were given Leibnitz. by holding up of hands. The first laws amongst the Grecians were unwritten and composed in verse, that the common people might with more eafe commit them to memory. Solon penned his laws upon wooden tablets, called Afores; and fome authors with great probability affert, that they were written in the manner called Bur populov, from left to right, and from right again to left, in the fame manner as oxen walk the furrows in plowing thus,

ΕΚΔΙΟΣ ΑΡ

It was against the law for any person to erase a decree, and certain persons called Fpaupaliis, were appointed to prevent any corruption; whose business it was also to transcribe the old and enter the new ones.

At Rome the people were in a great measure their own legislators; though Solon may be faid, in some fenfe, to have been their legislator, as the decemviri, who were created for the making of laws, borrowed a great number from those of Solon. See LEX.

With us the legislative power is lodged in the king, lords, and commons affembled in parliament. See Law

and PARLIAMENT.

LEGITIMATION, an act whereby illegitimate children are rendered legitimate. See BASTARD.

LEGITIME, in Scots law, that share of the moveable effects belonging to a husband and wife, which upon the hufband's death falls to the children.

LEGUMEN, or Pop, in botany; a species of seedveffel which has two valvesor external openings inclosing a number of feeds that are fastened along one suture only. In this last circumstance the feed vessel in question differs from that termed by botanifts filiqua, in which the inclosed feeds are fastened alternately to both the futures or joinings of the pod.

The feed-veffel of all the pea bloom or butterflyfhaped flowers, the diadelphia of Linnæus, is of this pod kind. Such, for inflance, is the feed-veffel of the

pea, vetch, lupine, and broom.

LEGUMINOUS, an appellation given to all plants

whose fruit is a legumen.

LEIBNITZ (Godfrey William-de), an eninent mathematician and philosopher, was born at Leiplic in Saxony in 1646. At the age of 15 years, he applied himself to mathematics at Leiplic and Jena; and in 1663, maintained a thesis de Principiis Individuationis. The year following he was admitted mafter of arts. He read with great attention the Greek philosophers; and endeavoured to reconcile Plato with Aristotle, as he afterwards did Aristotle with Des Cartes. But the fludy of the law was his principal view; in which faculty he was admitted bachelor in 1665. The year following he would have taken the degree of doctor; but was refused it on pretence that he was too young, though in reality because he had raised himself several enemies by rejecting the principles of Aristotle and the schoolmen. Upon this he went to Altorf, where he maintained a thesis de Casibus Perplexis, with such applause, that he had the degree of doctor conferred on him. He might have fettled to great advantage at Paris; but as it would have been necessary to have embraced the Roman Catholic religion, he refused all offers. In 1673, he went to England; where he became acquainted with Mr Oldenburg, fecretary of Vol. IX. Part II.

the royal fociety, and Mr John Collins, fellow of Leibnitthat fociety. In 1676, he returned to England, and thence went into Holland, in order to proceed to Hanover, where he proposed to settle. Upon his arrival there, he applied himself to enrich the duke's library with the best books of all kinds. The duke dying in 1679, his fuccessor Ernest Augustus, then bishop of Osnaburgh, showed our author the same favour as his predecessor had done, and ordered him to write the history of the house of Brunswick. He undertook it, and travelled over Germany and Italy in order to collect materials. The elector of Brandenburgh, afterwards king of Pruffia, founded an academy at Berlin by his advice; and he was appointed perpetual prefident, though his affairs would not permit him to refide constantly at Berlin. He projected an academy of the fame kind at Drefden; and this defign would have been executed, if it had not been prevented by the confusions in Poland. He was engaged likewise in a scheme for an universal language. His writings had long before made him sumous over all Europe. Befide the office of privy-counfellor of justice, which the elector of Hanover had given him, the emperor appointed him in 1711 aulic counsellor; and the czar made him privy counfellor of justice, with a pension of 1000 ducats. He undertook at the fame time the estalishment of an academy of science at Vienna; but the plague prevented the execution of it. However, the emperor, as a mark of his favour, fettled a pension on him of 2000 storins, and promifed him another of 4000 if he would come and refide at Vienna. He would have complied with this offer, but he was prevented by death in 1716. His memory was fo throng, that in order to fix any thing in it, he had no more to do but to write it once; and he could even in his old age repeat Virgil exactly. He professed the Lutheran religion, but never went to fermon; and upon his death bed, his coachman, who was his favourite fervant, defiring him to fend for a minister, he refused, saying, he had no need of one. Mr Locke and Mr Molyneux plainly feem to think that he was not fo great a man as he had the reputation of being. Foreigners did for some time ascribe to him the honour of an invention, of which he received the first hints from Sir Isaac Newton's letters, who had discovered the method of fluxions in 1664 and 1665. But it would be tedious to give the reader a detail of the dispute concerning the right to that in-

LEIBNITZIAN philosophy, or the philosophy of Leibnitz, is a system of philosophy formed and published by its author in the last century, partly in emendation of the Cartelian, and partly in opposition to the Newtonian. The basis of Mr Leibnitz's philosophy was that of Des Cartes; for he retained the Cartelian fubtile matter, with the univerfal plenitude and vortices; and represented the universe as a machine that should proceed for ever by the laws of mechanism, in the most perfect state, by an absolute inviolable necesfity, though in fome things he differs from Des Cartes. After Sir Ifaac Newton's philosophy was published in 1687, he printed an essay on the celestial motions, Act. Enud. 1689, where he admits of the circulation of the ether with Des Cartes, and of gravity with Sir Isaac Newton; though he has not reconciled these principles, nor shown how gravity arose from the

Leibnit- impulse of this ether, nor how to account for the pla- he concludes, that the mind is naturally determined. Leibnitnetary revolutions, and the laws of the planetary motions in their respective orbits. That which he calls the harmonical circulation, is the angular velocity of any one planet, which decreases from the perihelium to the aphelium in the fame proportion as its distance from the fun increases; but this law does not apply to the motions of the different planets compared together; because the velocities of the planets, at their mean distances, decrease in the same proportion as the square roots of the numbers expressing those distances. Befides, his fyltem is defective, as it does not reconcile the circulation of the ether with the free motions of the comets in all directions, or with the obliquity of the planes of the planetary orbits; nor resolve other objections to which the hypothesis of the plenum and vortices is liable. Soon after the period just mentioned, the dispute commenced concerning the invention of the method of fluxions, which led Mr Leibnitz to take a very decided part in opposition to the philosophy of Sir Isaac Newton. From the wisdom and goodness of the Deity, and his principle of a fufficient reason, he concluded that the universe was a perfect work, or the best that could possibly have been made; and that other things, which were incommodious and evil, were permitted as neceffary confequences of what was best; the material fystem, considered as a perfect machine, can never fall into disorder, or require to be fet right; and to suppofe that God interpofes in it, is to lessen the skill of the author, and the perfection of his work. He expressly charges an impious tendency on the philosophy of Sir Isaac Newton, because he afferts, that the fabric of the universe and course of nature could not continue for ever in its prefent state, but would require, in process of time, to be re-established or renewed by the hand of its Former. The perfection of the universe, by reason of which it is capable of continuing for ever by mechanical laws in its prefent state, led Mr Leibnitz to diffinguish between the quantity of motion and the force of bodies; and, whilft he owns, in oppofition to Des Cartes, that the former varies, to maintain that the quantity of force is for ever the fame in

fquares of their velocities. This fystem also requires the utter exclusion of atoms, or of any perfectly hard and inflexible bodies. 'The advocates of it alledge, that according to the law of continuity, as they call a law of nature invented for the fake of the theory, all changes in nature are produced by infensible and infinitely small degrees; so that no body can, in any case, pass from motion to rest, or from reft to motion, without passing through all posfible intermediate degrees of motion: whence they conclude, that atoms or perfectly hard bodies are impoffible: because if two of them should meet with equal motions, in contrary directions, they would necessarily flop at once, in violation of the law of continuity.

the universe, and to measure the forces of bodies by the

Mr Leibnitz proposes two principles as the foundation of all our knowledge; the first, that it is imposfible for a thing to be and not to be at the fame time. which, he fays, is the foundation of fpeculative truth : the other is, that nothing is without a fufficient reafon why it should be fo rather than otherwife; and by this principle, according to him, we make a transition from abstracted truths to natural philosophy. Hence

in its volitions and elections, by the greatest apparent good, and that it is impossible to make a choice between things perfectly like, which he calls indifcernibles; from whence he infers, that two things perfectly like could not have been produced even by the Deity: and he rejects a vacuum, partly because the parts of it must be supposed persectly like to each other. For the fame reason he also rejects atoms, and all similar particles of matter, to each of which, though divisible in infinitum, he ascribes a monad (Act. Lipsie 1698, p. 435.) or active kind of principle, endued, as he fays, with perception and appetite. The effence of fubiliance he places in action or activity, or, as he expresses it, in something that is between acting and the faculty of acting. He affirms absolute rest to be impossible, and holds motion, or a fort of nifus, to be effential to all material fubflances. Each monad he deferibes as representative of the whole universe from its point of fight; and after all, in one of his letters he tells us, that matter is not a substance, but a subflantiatum, or phenomené bien fonde. He frequently urges the comparison between the effects of opposite motives on the mind, and of weights placed in the scales of a balance, or of powers acting upon the fame body with contrary directions. His learned antagonist Dr Clarke denies that there is a similitude between a balance moved by weights, and a mind acting upon the view of certain motives; because the one is entirely passive, and the other not only is acted upon, but acts also. The mind, he owns, is purely passive in receiving the impression of the motive, which is only a perception, and is not to be confounded with the power of acting after, or in consequence of, that perception. The difference between a man and a machine does not consist only in fensation and intelligence, but in this power of acting also. The balance, for want of this power, cannot move at all when the weights are equal; but a free agent, he fays, when there appear two perfeetly alike reasonable ways of acting, has still within itself a power of choosing; and it may have strong and very good reasons not to forbear.

The translator of Mosheim's Ecclesiastical History observes, that the progress of Arminianism has declined in Germany and feveral parts of Switzerland, in confequence of the influence of the Leibnitzian and Wolfian philosophy. Leibnitz and Wolf, by attacking that liberty of indifference, which is supposed to imply the power of acting not only without, but against, motives, struck, he fays, at the very foundation of the Arminian fystem. He adds, that the greatest possible perfection of the universe, considered as the ultimate end of creating goodness, removes from the doctrine of predeftination those arbitrary procedures and narrow views with which the Calvinits are supposed to have loaded it, and gives it a new, a more pleafing, and a more philosophical aspect. As the Leibnitzians. laid down this great end as the supreme object of God's univerfal dominion, and the hope to which all his difpensations are directed; fo they concluded, that if this end was proposed, it must be accomplished. Hence the doctrine of necessity, to fulfil the purposes of a predestination founded in wisdom and goodness; a neceffity, physical and mechanical, in the motions of material and inanimate things, but a necessity moral and

Leiceffer. Spiritual in the voluntary determinations of intelligent beings, in confequence of propellent motives, which produce their effects with certainty, though these effects be contingent, and by no means the offspring of an absolute and essentially immutable fatality. These principles, fays the same writer, are evidently applicable to the main doctrines of Calvinism; by them predestination is confirmed, though modified with respect to its reasons and its end; by them irresistible grace (irrefiftible in a moral fense) is maintained upon the hypothelis of propellent motives and a moral necessity; the perfeverance of the faints is also explicable upon the same system, by a series of moral causes producing

a feries of moral effects.

LEICESTER, the capital of a county of the fame name in England, upon the river Leire, now called Soare. From its fituation on the Fosse-way; and the many coins and antiquities discovered here, it seems probable that it was a place of fome note in the time of the Romans. In the time of the Saxons it was a bishop's fee, and afterwards fo repaired and fortified by Edelflida, that it became, according to Matthew Paris, a most wealthy place, having 32 parish-churches; but in Henry the Second's reign it was in a manner quite ruined, for joining in rebellion against him with Robert earl of Leicester. In the reign of Edward III. however, it began to recover by the favour of his fon Henry Plantagenet, duke and earl of Lancaster, who founded and endowed a collegiate church and hospital here. It is a borough and corporation, governed by a mayor, recorder, steward, bailiff, 24 aldermen, 48 common-council men, a folicitor, a town-clerk, and two chamberlains. It had its first charter from king John. The freemen are exempt from paying toll in all the fairs and markets of England. It has three hospitals, that mentioned above, built by Henry Plantagenet duke of Lancaster, and capable of supporting 100 aged people decently; another erected and endowed in the reign of Henry VIII. for 12 poor lazars : and another for fix poor widows. The castle was a prodigious large building, where the duke of Lancafter kept his court. The hall and kitchen still remain entire, of which the former is very spacious and lofty; and in the tower over one of the gate-ways is kept the magazine for the county militia. There was a famous monastery here, anciently called, from its fituation in the meadows, St Mary de Pratis or Prez. In these meadows is now the course for the horse-race. It is faid that Richard III. who was killed at the battle of Bofworth, lies interred in St Margaret's church. The chief bufiness of Leicester is the stocking-trade, which hath produced in general to the amount of 60,000 l. a year. In a parliament held here in the reign of Henry V. the first law for the burning of heretics was made, levelled against the followers of Wickliffe, who was rector of Lutterworth in this county, and where his pulpit is faid still to remain. The town fuffered greatly in the civil wars, by two fieges upon the back of one another. It has given the title of earl to feveral noble families. The prefent earl was created in 1784, and is the marquis of Townshend's fon. Its market on Saturday is one of the greatest in England for provisions, especially for corn and cattle; and it has four fairs in the year.

LIMCESTERSHIRE, an inland county of England, in Leicesterform almost circular. It has Nottinghamshire and Leighlin.

LEI

Derbyshire to the north; Rudandshire and Lincolnthire on the east; Warwickshire on the west, from which it is parted by the Roman military way called Walling-fireet; and by Northamptonshire on the fouth; and is about 170 miles in circumference. As it lies at a great diffance from the fea, and is free from bogs and marshes, the air is sweet and wholesome. It is a champaign country in general, and abundantly fertile in corn and grafs, being watered by feveral rivers, as the Soure, or Sare, which passes through the middle of it, and abounds in excellent falmon and other fish; the Wreke, Trent, Eye, Sense, Auker, and Aven. These rivers being mostly navigable, greatly facilitate the trade of the county. In fome parts there is a great fearcity of fuel, both wood and coal s but in the more hilly parts there is plenty of both. together with great flocks of sheep. Besides wheat, barley, oats, and peafe, it produces the best beans in England. They grow fo tall and luxuriant in fome places, particularly about Barton in the Beans, that they look, towards the harvest-time, like a forest; and the inhabitants eat them not only when they are green. as in other places, but all the year round; for which reason their neighbours nickname them bean-bellies. They have plenty of very good wool, of which they not only make great quantities of stockings, but fend a great quantity unmanufactured into other parts of England. They make great profit of their corn and pulse; and likewise breed great numbers of coach and dray horses, most of the gentlemen being graziers: and it is not uncommon to rent grafs-farms from 500 l. to 2000 l. a-year. It is in the midland circuit. and diocese of Lincoln; and fends four members to parliament, two for Leicester, and two for the county.

LEIGH (Sir Edward), a very learned Englishman, was born at Shawell in Leicestershire, and educated at Magdalen Hall, Oxford. He was a member of the long parliament, and one of the members of the house of commons who were appointed to fit in the affembly of divines. He was afterwards colonel of a regiment for the parliament; but in 1648 was numbered among the Presbyterians who were turned out, and in December he was imprisoned. From this period to the Restoration he employed himself in writing a confiderable number of learned and valuable books, which showed profound learning, a knowledge of the lan-guages, and much critical fagacity; and of which a lit is given by Anthony Wood. Sir Edward died at his house called Rushal Hall, in Staffordshire, June 2. 1671 : and was buried in the chancel of Rushall

LEIGHLIN, a town of Ireland, fituated in the county of Carlow, and province of Leinster; about 43 miles from Dublin, near the river Barrow. It is a borough, and returns two members to parliament; par tronage in the bishop of the diocese, this being a bishopric united to Ferns. At the east end of the church of Old-Leighlin is a famous well covered with great ash-trees, and dedicated to St Lasarian. This place was formerly a city, though now a very mean village, and the cathedral has been kept in good repair. It was a fole bishopric, founded in 632, and joined to Leighton, Ferns in 1600. It is reported, that Gurmundus a Da-Leinster. nifh prince was buried in this church. The last bishop of Leighlin before its union with Ferns, was the Right Rev. Robert Grave, who coming by fea to be installed. fuffered shipwreck in the harbour of Dublin, and perished in the waves. This cathedral was burnt to the ground, it is fair, by lightning; and rebuilt, A. D. 1232, then dedicated to St Lafarian or Lazarinus, before-mentioned; fince the fees were joined, it is made ufe of as a parish-church. Leighlin-bridge is situated about two miles from this village; it was deftroved by the Irish in 1577. Here are the remains of a castle and of an old abbey. This is a post town, and has fairs in

May, September, and October. LEIGHTON (Robert), archbishop of Glasgow. During Cromwell's usurpation, he was minister of a church near Edinburgh, and diftinguished himself by his charity, and his aversion to religious and political disputes. The ministers were then called over yearly in the fynod, and were commonly asked. Whether they had preached to the times? " For God's fake (answered Leighton), when all my brethren preach to the times, fuffer me to preach about eternity." His moderation, however, giving offence, he retired to a life of privacy. But foon after, he was called by the unanimous voice of the magistrates, to prefide over the college of Edinburgh; where, during ten years, he displayed all the talents of a prudent, wife, and learned governor. Soon after the Reftoration, when the ill-judged affair of introducing episcopacy into Scotland was resolved on, Leighton was confecrated bishop of Dunblane, and immediately gave an inflance of his moderation : for when Sharpe and the other bishops intended to enter Edinburgh in a pompous manner, Leighton remonftrated against it; but finding that what he faid had no weight, he left them, and went to Edinburgh alone. Leighton, in his own diocese, fet such a remarkable example of moderation, that he was revered even by the most rigid of the opposite party. He went about, preaching without any appearance of pomp; gave all he had to the poor; and removed none of the ministers, however exceptionable he might think their political principles. But finding that none of the other bishops would be induced to join, as he thought, properly in the work, he went to the king, and refigned his bishopric, telling him he would not have a hand in fuch oppressive measures. Soon after, the king and council, partly induced by this good bishop's remonstrances, and partly by their own obfervations, refolved to carry on the cause of episcopacy in Scotland on a different plan; and with this view, Leighton was perfuaded to accept of the archbishopric of Glasgow, on which he made one effort more; but finding it not in his power to stem the violence of the times, he refigned his archbishopric, and retired into Suffex, where he devoted himself to acts of piety. He died in the year 1684. He was of a most amiable disposition, strict in his life, polite, cheerful, engaging in his manners, and profoundly learned. He left many fermons and ufeful tracts, which are greatly efteemed.

LEINSTER, the eaftern province of Ireland, bounded by Ulster on the north; St George's, or the Irish Channel, on the east and fouth; and by the provinces of Connaught and Munster on the west. The capital

city of this province and of the kingdom is Dublin. Leipfic, It contains 12 counties, viz. Carlow, Dublin, Kil-Lei dare, Kilkenny, King's-county, Longford, Louth, Meath, Queen's county, West meath, Wexford, and Wicklow. It is the most level and best cultivated province in the kingdom; containing 2,642,958 Irish plantation acres, 858 parifies, 99 baronies, and 53 boroughs; it is about 124 miles long and 74 broad, and extends from 51° 45' to 55° 45' north latitude. Dermod king of Leinster marrying his daughter Eva to Strongbow earl of Pembroke, on his decease made him his univerfal heir; whereby the Earl inherited the province of Leinster, and was afterwards enfeoffed of it by Hen. II. He died in 1176, and left an only daughter Isabel, espoused to William Marshall earl of Pembroke; by her he had five fons, who fucceeded to his great effates in Leinster. This province gives title of Duke to the ancient and noble family of Fitzgerald. In the early ages, this diffrict was almost one continued forest, and was principally the feat of the Kinfelaghs.

LEIPSIC, a large, strong, and populous town o Mifnia in Germany, with a castle, and a famous univerfity. It is neat, and regularly built, and the streets are lighted in the night; it carries on a great trade. and has a right to flop and fell the merchandizes defigned to pass through it, and the country for 75 miles round has the fame privilege. There are three great fairs every year; at the beginning of the year, Easter and Michaelmas, which last 15 days each. There are fix handsome colleges belonging to the university, befides the private colleges. The town-house makes an indifferent appearance, but the exchange is a fine ftructure. The town was taken by the king of Pruffia in the late war, but given up by the peace in 1763. It is feated in a plain between the rivers Saale and Muld, near the confluence of the Playfie, the Elfter, and the Baide. E. Long. 12. 55. N. Lat. 51. 19.

LEITH, (anciently called Inverleith), the port of Edinburgh, is feated on the banks of the Forth, about two miles from the capital. It is built on both fides of the harbour; by which it is divided into two parts, called North and South Leith. The communication between thefe was by a stone bridge of three arches founded by Robert Ballentyne abbot of Holyrood-house in 1493, but lately pulled down. The harbour is formed by the conflux of the rivulet called the Water of Leith with the Frith of Forth. The depth of water, at neap-tides, is about nine feet; but in high fpring-tides, it is about 16 feet. In the beginning of the present century, the town-council of Edinburgh improved the harbour at an enormous expense, by extending a stone-pier a confiderable way into the fea. In 1777, they erected an additional stone quay towards its west side. Upwards of .100 ships could then lie conveniently in this port : but it can now admit of a much greater number, in confequence of having lately undergone great improvements. In order to enlarge it, the old bridge has been pulled down, and an elegant draw-bridge stected a little to the eastward of the former fite. It is accommodated with wet and dry docks, and other conveniences for ship building, which is there carried on to fome extent, as veffels come to Leith to be repaired from all parts of Scotland. A new bason and docks

are proposed to be added; which, when completed, will render this a very capacious, as well as a most fate and convenient, station for trading vestels. And the road of Leith affords good anchorage for ships of the

greatest fize.

The harbour of Leith was granted to the community of Edinburgh by king Robert in 1329; but the banks of the harbour belonged to Logan of Reftalrig, a turbulent and ambitious baron, from whom the citizens were under the necessity of purchasing the bank or wafte piece of ground between the houses and the rivulet above mentioned, for the purposes of wharfs, as well as for erecting shops and granaries, neither of which they could do before. As the fituation of Leith, however, is much more convenient for trade than that of Edinburgh, which is two miles didant from the harbour, the inhabitants of the metropolis have failen upon various methods of restraining the trade of Leith. They first purchased, from Logan of Restalrig, an exclusive privilege of carrying on every fpecies of traffic in the town of Leith, and of keeping warehouses and inns for the entertainment of strangers in that place; and in 1483, the town council prohibited, under fevere penalties, the citizens of Edinburgh from taking into partnership any inhabitant of Leith. To free themselves from this oppression, the people of Leith purchased the superiority of their town from Logan of of Reftalrig for 3000 l. Scots, and it was erected into a burgh of barony by the queen regent, Mary of Lorraine, who promifed to erect it into a royal borough. She died, however, before this was acccomplished; and upon her death, Francis and Mary, in violation of the private rights of the people of Leith, re fold the fuperiority to the town of Edinburgh, to whom it has fince been confirmed by grants from fuccessive fove-

On the breaking out of he diffurbances at the Reformation, the queen-regent caused the whole town to be fortified, that the French troops might have a more ready inlet into the kingdom. It was accordingly furrounded with a wall, having eight batlions: but this wall went no farther than the freet now called Bernard's nook, because at that time the fea came up the length of that firest; and even as late as 1623, a house fituated exactly where the weigh-house is at prefent, is deferibed as bounded on the east by the fand of the fea-shore." All that space, therefore, on which the row of houses nearest the harbour of Leith now stands, has been gained since that time from the

fea

In the time of Charles I. a fortification was erected at Leith by the Covenanters. Cromwell built a ftrong fort at the place ftill called the citade in North Leith; but it was pulled down on the refloration of Charles II. by order of government. A gate with portcullices are the prefent remains of that fortification.—A palace allo appears to have formerly flood here, Biuated at the north-call boundaries of the former town, on the fpot where the prefent weigh-houle flands. It was deftroyed by the English in the time of Henry VIII. The remains of this building, called the king's work, with a garden, and a piece of wafte land that furrounded it, was erected into a barony by James VI. and bethowed upon Bernard Lindfay of Lochill, groom of the chamber to that princes. He is faid to have fully repaired, and appropriated it to the recreations

of the court; but it foon fell from its dignity, and became fubfervient to much more ignoble purpofes. The
tennis court was converted into a weigh house; and
the street which bounds it still bears the name of the
founder, from whom it is called Benard!' nook.

As Leith lay within the parish of Restalrig, the church of Restalrig was of consequence the place of worship for the inhabitants of Leith; but in 1650 the Affembly ordered that church to be pulled down as a monument of idolatry, fo that Leith wanted a parish-church for upwards of 50 years. During that period they reforted for worship to a large and beautiful chapel already built, and dedicated to St Mary, which is now called South Leith church : and in 1600 this chapel was by authority of parliament declared to be the parish church of the district; so that Restalrig is now in the parish of South-Leith, as the latter was formerly in that of Restalrig. In 1772, a Chapel of Eafe was erected by the inhabitants, as the parishchurch was insufficient to contain the number of hearers. There are also an episcopal and several dissenting congregations in Leith. North Leith is a parish by itself, and the church is fituated at what was the north end of the old bridge.

Though a very great trade is carried on between Leith and many foreign ports, yet the articles of export and import fluctuate fo much, that it would be useless to enter into any details either as to species or quantity. In general, the imports from France, Spain, and Portugal, are wines, brandy, and fruits; from the West Indies and America, rice, indigo, rum, fugar, and logwood. But the principal foreign trade of Leith is by the eastern seas, for the navigation of which it is most happily situated. To Germany, Holland, and the Baltic, it exports lead, glass-ware, linen and woollen ftuffs, and a variety of other goods; and from thence it imports immense quantities of timber, oakbark, hides, linen rags, pearl aftes, flax, hemp, tar, and many other articles. The Baltic trade, however, is at prefent rather on the decline; the great extent to which it was carried on for some years past having been chiefly owing to the vaft increase of new buildings in Edinburgh and its environs. The coasting trade is at present the principal branch that employs the shipping at Leith, including those which belong to other ports on the Forth, which are faid to make about one fourth. of the tonage of the Leith vessels. The ships employed in the London trade are in general of a large fize, elegantly constructed, and furnished with excellent accommodations for paffengers. They make at an average four voyages up and down in the year. The largest ships in this port, however, are those employed in the Greenland fishery.

The fhipping at Leith renders the demand for ropes, fail cloth, and cordage, very confiderable. There were lately three different companies who carried on their manufactures, befides fome private persons who dealt less considerably. The first of those companies was established in the beginning of the prefent century; and 20 years ago made, it is faid, larger dividends among the partners than any trading or manufacturing company in the justice. There are only three companies at prefent, but a number of private manufacturers.

In the middle of the laft century, a manufactory of green glass was established at the citadel of Leith. Chopin bottles were fold at 4s. 6d. per dozen, and Leith. other bottles in proportion. Soon afterwards this article was manufactured also in North Leith; and, in 1707, chopin bottles were fold at 28. 6d. per dozen, and fo proportionably. That honse being burnt down in 1746, a new house was built the following year on South-Leith fands, and an additional one in 1764. The annual expence of both houses was between 8000 l. and 9000 l. Another was afterwards added, and three more have lately been erected. They manufacture not only bottles, but also window-glass and crystal-ware of all forts.

> Manufactures of foft foap and candles were erected by St Clair of Rollin and some merchants; the former in 1750, and the latter in 1770: a manufacture of hard foap was also established in 1770. Besides thefe, there are a confiderable manufacture for making cards with which wool is combed, a great carpet factory, and feveral iron-forges. There was also a sugarhouse; but it has been given up, as has likewise Mr

St Clair's foap-work.

The inhabitants of Leith were divided into four classes; and these erected into corporations by the queen dowager, Mary of Lorraine. These were mariners, maltmen, trades, and traffickers. The first of these confifted of shipmasters and failors; the second, of malt-makers and brewers; the third, of coopers, bakers, fmiths, wrights, &c.; and the fourth, of merchants and shop-keepers. Of these corporations the mariners are the most considerable. They obtained from Mary of Lorraine a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the support of their poor. This duty, which not many years ago did not amount to 40 l. a-year, now rifes from 70 l. to 1201. as trade flourishes. For the fame purpose the shipmasters also pay 6d. a-pound out of their own wages annually; and the like fum they give upon the wages of their failors. From these and other donations, this corporation is enabled to pay from 600 l. to 700 l. ayear to their poor. Opposite to South-Leith church there is a large house belonging to them, called the Trinity-hospital, because originally confecrated to the Holy Trinity. In this house some of their poor used formerly to be maintained, but now they are all outpenfioners. Befides other apartments, this hospital contains a large handsome hall for the meetings of the corporation. Adjoining to the school-house there is another hospital, called king James's hospital; and bears upon its front the cypher and arms of that prince. Here fome poor women belonging to the other corporations are maintained.

As the town of Leith was very ill supplied with water, and the freets were neither properly cleaned nor lighted, an act for remedying these defects was passed in the year 1771, appointing certain persons from among the magistrates of Edinburgh, lords of session, inhabitants of Edinburgh and Leith, and members of the corporations of Leith, commissioners of police; empowering them to put this act in execution; and, for that purpose, to levy a sum not exceeding 6d. in the pound upon the valued rent of Leith. The great change which has fince taken place on the fweets of Leith shows the good effect of this act, and that it has

both been judiciously prepared, and attentively execu- Leitrim

Leith is computed to contain about thirteen thoufand inhabitants. The government of the town is vested in a magistrate sent from Edinburgh, having admiral's power; and in two refiding bailies elected, by the town-council.

LEITRIM, a county of Ireland, fituated in the province of Connaught, is bounded on the north by the bay of Donnegal and part of Fermanagh, on the fouth and west by Sligo and Roscommon, and on the east by Fermanach and Cavan. It is a fruitful county: and, though mountainous, produces great herds of black cattle; but has few places of note. It contains 206.830 Irish plantation acres, 21 parishes, 5 baronies, and 2 boroughs, and fends fix members to parliament : it is about 42 miles long, and 17 broad.

LEITRIM, the shire town of the county of that name, is pleafantly fituated on the banks of the river Shannon, about 80 miles from Dublin; and appears to have been formerly a place of fome note. St Mac Liegus, fon of Cernac, was bishop here : and his festival is observed on the 8th of February. It has fix fairs

in the year,

LEIXLIP, a post and fair town of Ireland pleafantly fituated in the county of Kildare and province of Leinster, about 8 miles from Dublin. Near it are the ruins of the church and castle of Confy. The castle of Leixlip is beautifully feated on the banks of the river Liffey; it is a fine edifice with large and pleafant gardens, at one fide of which is a fine waterfall called the Salmon-leap, there being plenty of that species of fish hereabouts. A mile from this is Castletown, the magnificent feat of Mr Conolly. There are three fairs here in the year.

LELAND (John), the great English antiquary, was born in London about the year 1507. Having loft his parents when a child, he had the good fortune to find a friend and patron in one Mr Thomas Miles, who placed him in St Paul's fchool, of which the grammarian Lilye was mafter. From that school he was fent to Christ's college, Cambridge; whence, after some years residence, he removed to All-Souls, Oxford. From Oxford he went to Paris, chiefly with a defign to fludy the Greek language, which at that time was but little understood in this kingdom. On his return to England he took orders, and was foon appointed chaplain to king Henry VIII. who also gave him the rectory of Poppeling, in the marshes of Calais, appointed him his librarian, and in 1533 granted to him, by commission under the great seal, the office of king's antiquary; an office never borne by any other perion before or fince. By this commission he was empowered to search for ancient writings in all the libraries of colleges, abbeys, priories, &c. in his majesty's dominions. We are told by his last biographer, that he renounced popery foon after his return to England; but he quotes no authority. Be this as it may, in 1536, he obtained a dispensation to keep a curate at Poppeling, and fet out on his journey in fearch of antiquities. In this employment he spent fix years, during which time he visited every part of England where monuments of antiquity were Leland. to be expected. After his return, in the year 1542, he authors who successively appeared in that cause. He Lelegies was presented by the king to the rich rectory of Haseley in Oxfordshire; and in the following year he gave him a prebend of King's College, now Christ's church, in Oxford, besides that of East and West Knowle, in the cathedral of Salisbury. Being thus amply provided for, he retired to a house of his own in the parish of St Michael le Querne in London, where he spent fix years more in digefting the materials which he had collected. King Henry VIII. died in 1547; and in a short time after, poor Leland lost his senses. He was at first seized with a deep melancholy, which was fucceeded by a total deprivation of his reason. In this dreadful flate he continued till the beginning of the year 1552, when he was happily released by death. He was buried in the church of St Michael le Ouerne. which was destroyed by the fire in 1666. Mr Leland is remembered as a man of great learning, an univerfal linguist, an excellent Latin poet, and a most indefatigable and skilful antiquary. On his death, king Edward VI. gave all his papers to Sir John Checke, his tutor and Latin fecretary of state. The king dying, and Sir John being obliged to leave the kingdom, he gave four folio volumes of Leland's collections to Humphrey Purefoy, Efq; which, in 1612, were by his fon given to William Burton, author of the history of Leicestershire. This gentleman also became posfelled of the Itinerary in 8 vols folio, which, in 1632, he deposited in the Botleian library. Many other of Leland's manuscripts, after the death of Sir John Checke, fell into the hands of lord Paget, Sir William Cecil, and others, which at last fortunately came into the possession of Sir John Cotton. These manufcripts were of great use to all our subsequent antiquarians, particularly Cambden, Sir William Dugdale, Stowe, Lambard, Dr Batteley, Ant. Wood, &c. His Itinerary throughout most parts of England and Wales, was published by Mr Hearne, 9 vols 8vo. in 1710-11; as was also his Collectanea de rebus Britannicis, 6 vols 8vo, in 1715.

LELAND (John), well known by his writings in defence of Christianity, was born at Wigan in Lancashire in 1601, of eminently pious and virtuous parents. They took the earliest care to season his mind with proper instructions; but, in his fixth year, the small-pox deprived him of his understanding and memory, and expunged all his former ideas. He continued in this deplorable state near a twelvemonth, when his faculties feemed to fpring up anew; and though he did not retain the least traces of any impressions made on him before the diftemper, yet he now discovered a quick apprehension and strong memory. In a few years after, his parents fettled in Dublin, which fituation gave him an eafy introduction to learning and the sciences. When he was properly qualified by years and fludy, he was called to be paftor to a congregation of Protestant diffenters in that city. He was an able and acceptable preacher, but his labours were not confined to the pulpit. The many attacks made on Christianity, and by fome writers of no contemptible abilities, engaged him to confider the subject with the exactest care, and the most faithful examination. Upon the most deliberate inquiry, the truth and divine original, as well as the excellence and importance of Christianity, appearing to him with great luftre, he published answers to several

783 was indeed a mafter in this controverfy; and his hiftory of it. ftyled " A View of the Deiftical Writers that have appeared in England in the last and present Century, &c." is very greatly and defervedly efteemed. In the decline of life he published another laborious work, intitled, "The Advantage and Necessity of the Christian Revelation, shown from the State of Religion in the ancient Heathen World, especially with respect to the Knowledge and Worship of the One true God; a Rule of moral Duty, and a State of future Rewards and Punishments; to which is prefixed, a long and preliminary Discourse on Natural and Revealed Religion," 2 vols 4to. This noble and extenfive fubject, the feveral parts of which have been flightly and occasionally handled by other writers, Leland has treated at large with the greatest care, accuracy, and candour. And, in his "View of the Deiftical Writers," his cool and dispassionate manner of treating their arguments, and his folid consutation of them, have contributed more to depress the cause of atheism and infidelity, than the angry zeal of warm disputants. But not only his learning and abilities, but also his amiable temper, great modelty, and exemplary life, recommended his memory to general efteem and affection. He died in 1766.

LELEGEIS, the ancient name of Miletus, from the Leleges, the first inhabitants of it.

LELEGES, anciently a people of Afia, of Greek original; the name denoting " a collection of people :" they first occupied the islands; then passing over to the continent, they fettled partly in Mysia on the Sinus Adramyttenus, and partly in that part of Ionia next Caria .- There were Leleges also of Laconia. These went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnassus, where they fixed their habitation .- The inhabitants of Laconia and of Megara also bore this name for some time, from Lelex one of their kings.

LELEX, an Egyptian who came with a colony to Megara, where he reigned about 200 years before the Trojan war. His subjects were called from him Leleges -- Alfo the name of a Greek who was the first king of Laconia in Peloponnesus. His subjects were also called Leleges, and the country where he reigned Le-

LELY (Sir Peter), an excellent painter, born in Westphalia in the year 1617. He was placed as a disciple with Peter Grebber at Haerlem; and in 1641 was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became statepainter to Charles II. who knighted him; and being as. complete a gentleman as a painter, that king took pleafure in conversing with him. He practised portrait painting, and succeeded so well that he was preferred before all his cotemporaries. Hence he became perpetually involved in business; so that he was thereby prevented from going into Italy to finish the course of his studies, which in his younger days he was very defirous. of : however, he made himself amends, by getting the best drawings, prints, and paintings, of the most celebrated Italian mafters. Among these were the better part of the Arundel Collection, which he had from that family, many whereof were fold after his death at prodi-

Lemberg, gious rates, bearing upon them his usual mark of Lemery. P. L .- The advantage he reaped from this collection, the best chosen of any one of his time, appears from that admirable style which he acquired by daily converfing with the works of those great masters. In his correct draught and beautiful colouring, but more especially in the graceful airs of his heads, and the pleafing variety of his postures, together with the gentle and loofe management of the draperies, he excelled most of his predecessors. Yet the critics remark, that he preferved in almost all his female faces a drowfy fweetness of the eyes peculiar to himfelf; for which he is reckoned a mannerift. The hands of his portraits are remarkably fine and elegantly turned; and he frequently added landscapes in the back grounds of his pictures. in a fivle peculiar to himfelf, and better fuited to his subject than most men could do. He excelled likewise in crayon painting. He was familiar with, and much respected by, persons of the greatest eminence in the kingdom. He became enamoured of a beautiful English lady, to whom he was fome time after married; and he purchased an estate at Kew in the county of Surrey, to which he often retired in the latter part of his life. He died of an apoplexy in 1680 at London; and was buried at Covent-garden church, where there is a marble monument erected to his memory, with his buft, carved by Mr Gibbons, and a Latin epitapli, written, as is faid, by Mr Flatman.

LEMBERG, a town of Poland, capital of Red Ruffia, feated in the palatinate of Lemburg, on the river Pelteu. It is pretty well fortified, and defended by two citadels, one of which is feated on an eminence without the town. The fquare, the churches, and the public buildings, are magnificent; and it is a large and rich trading place. It has a Roman catholic archbishop, and an Armenian as well as a Ruffian bishop; but the Protestants are not tolerated. This city was reduced to the last extremity by the rebel Cossacs and Tartars, and was forced to redeem itself with a large fum of money. In 1672, it was befieged in vain by the Turks; but in 1704, was taken by fform by Char. XII. of Sweden. E. Long. 24. 46. N. Lat. 49. 51.

LEMERY (Nicholas), a celebrated chemist, born at Rouen in Normandy in 1645. After having made the tour of France, he, in 1672, commenced an acquaintance with M. Martyn apothecary to Monfieur the Prince; and performed feveral courses of chemistry in the laboratory of this chemist at the Hotel de Conde; which brought him to the knowledge and efteem of the prince. He provided himfelf at length with a laboratory of his own, and might have been made a doctor of physic : but he chofe to continue an apothecary, from his attachment to chemistry, in which he opened public lectures; and his confluence of scholars was so great as fearcely to allow him room to perform his operations. The true principles of chemistry in his time were but ill understood; Lemery was the first who abolished the fenfeless jargon of barbarous terms, reduced the science to clear and simple ideas, and promifed nothing that he did not perform. In 1681, he was disturbed on account of his religion; and came to England, where he was well received by Charles II.: but affairs not promifing him the fame tranquillity, he last expelled by the Pelasgi, about 1100 years before returned to France, and fought for shelter under a Doc- the Christian era. Lemnos is about 112 miles in cir-

drove him into the Romish communion to avoid perfecu- Leming tion. Hethen became affociate chemist and pensionary in the royal academy of sciences, and died in 1715. He wrote, A course of chemistry; An universal pharmacopæia; An universal treatise of drugs; and, A treatife on antimony.

LEMING, in zoology. See Mus. LEMMA, (of xaucava, " I affume,") in mathematics, denotes a previous propofition, laid down in order to clear the way for fome following demonstration: and prefixed either to theorems, in order to render their demonstration lefs perplexed and intricate; or to problems, to make their resolution more easy and short. Thus, to prove a pyramid one third of a prifm, or parallelopiped, of the fame base and height with it, the demonstration whereof in the ordinary way is difficult and troublefome; this lemma may be premifed, which is proved in the rules of progression, that the sum of the feries of the squares, in numbers in arithmetical progreffion, beginning from o, and going on 1, 4, 9, 16, 25, 36, &c. is always fubtriple of the fum of as many terms, each equal to the greatest; or is always one third of the greatest term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is first premifed, that a tangent may be drawn to the given curve in a given point.

So in physics, to the demonstration of most propofitions, fuch lemmata as these are necessary first to be allowed: that there is no penetration of dimensions: that all matter is divisible; and the like. As also in the theory of medicine, that where the blood circu-

lates, there is life, &c

LEMNA, DUCK-MEAT, in botany; a genus of the diandria order, belonging to the monœcia class of plants; and in the natural method ranking under the 54th order, Miscellance The male calvx is monophyllous; there is no corolla; the female calyx monophyllous; there is no corolla, one ftyle; the capfule unilocular. There are three fpecies, all natives of Britain, growing frequently in ditches and the shallow parts of stagnant waters. All of them are acceptable food for ducks and geefe.

LEMNIAN BARTH, Terra Lemnia, a medicinal, aftringent fort of earth, of a fatty confidence and reddish colour; used in the same cases as BOLE. It has its name from the island of Lemnos, whence it is chiefly brought. Many form it into round cakes, and impress a feal upon it; whence it is also called terra figillata. A fort is faid to be imported from Senegal, which is not properly an earth, though fo called, but composed of the dried pulp of the fruit of the BAOBAB.

LEMNIUS (Lævinus), a famous physician, born at Ziric Zee in Zealand, in 1505. He practifed physic with applause; and after his wife's death being made prieft, became canon of Ziric-Zee, where he died in 1560. He left feveral efteemed works, the principal of which is intitled De occultis natura miraculis.

LEMNOS (anc. geog.), anoble island in the Ægean fea, near Thrace, called also Dipolis, from its confitting of two towns. The first inhabitants were the Pelafgi, or rather the Thracians, who were murdered by their wives. After them came the children of the Lemnian widows by the Argonauts, whose defcendants were at tor's degree; but the revocation of the edict of Nantz cumference according to Pliny; who fays, that it is of-

Lemur.

Lemon ten shadowed by mount Athos, though at the distance of 87 miles. It has been called Hipfipyle from queen Hipfipyle. It is famous for a certain kind of earth or chalk called terra Lemnia, or terra figillata from the feal or impression which it can bear, and which is used for confolidating wounds. As the inhabitants were blackfmiths, the poets have taken occasion to fix the forges of Vulcan in that island, and to confecrate the whole country to his divinity. Lemnos is also celebrated for a labyrinth, which, according to fome traditions, furpaffed those of Crete and Egypt. Some remains of it were ftill visible in the age of Pliny. The island of Lemnos was reduced under the power of Athens by Miltiades.

LEMON, in botany. See CITRUS.

LEMON Illand, one of the Skelig-islands fo called ; fituated off the coaft of the county of Kerry, in the province of Munster in Ireland. It is rather a round rock, always above water, and therefore no way dangerous to ships. An incredible number of gannets and other birds breed here; and it is remarkable that the gannet nefties no where on the fouthern coasts of Ireland but on this rock, though many of them are feen on all parts of our coasts on the wing. There is another rock on the northern coast of Ireland remarkable for the fame circumstance.

LEMONADE, a liquor prepared of water, fugar, and lemon or citron juice; it is very cooling and grate-

LEMOVICES, a people of Aquitania, fituated between the Bituriges Cubi to the north, the Arverni to the east, the Cadurci to the fouth, and the Pictones to the west. Now the Limofin and La Marche.

LEMUR, the Maucauco, in zoology, a genus of quadrupeds belonging to the order of primates, the characters of which are thefe : There are four fore-teeth in the upper jaw, the intermediate ones being remote; and fix long, compressed, parallel teeth in the under jaw; the dog-teeth are folitary, and the grinders are

fomewhat lobated

1. The tardigradus, or tail-less mancauco, a small animal found in Bengal and the island of Ceylon. It is of a very fingular construction, and perhaps longer in proportion to its thickness than any other quadruped. The head is roundish, with a sharp-pointed nose, and fmall ears; the body is covered with short, foft, and filky ash-coloured and reddish fur : the tocs are naked. and the nails flat ; excepting those of the inner toe on each hind foot, which are long, crooked, and sharp. The length of the animal from the nofe to the rump is fixteen inches .- It lives in the woods, and feeds on fruits: In a tame state, it appears to be fond of eggs, and it would also greedily devour small birds. This animal has the inactivity of the floth, and creeps flowly along the ground: it is very tenacious of its hold, and makes a plaintive noife.

A variety of the above, or according to Mr Pennaut

a diffinct frecies, is.

2. The loris of Buffon, or tardigradus of Seba. It has a produced dog-like vifage, with the forehead high above the nofe : the ears are large, thin, and rounded : the body is flender and weak : limbs are very long and flender; and thumb on each foot is more diffinet, and feparate from the toes: the hair on the body is univerfally short, and delicately foft; the colour on the

Vol. IX. Part II.

upper part tawny, beneath whitish. In length, from Lemur. the tip of the nofe to the anus, the animal is only eight inches. It differs totally in form and in nature from the preceding; and notwithstanding the epithet of tardigradus or floth given in Seba, it is very active, and afcends trees most nimbly. It has the actions of an ape; and, if we credit Seba, the male climbs the trees, and taftes the fruits before it prefents them to its

3. The mongooz, or woolly maucauco, inhabits Madaguscar, and the islands to the eastward as far as Celebes. It is about the fize of a cat, and has the whole upper part of the body covered with long, foft, and thick fur, a little curled or waved, of a deep brownish ash-colour; the tail is very long, covered with the same fort of hair, and of the fame colour. It lives on fruits, turns its tail over its head to protect it from rain, and fleeps on trees: it is very fportive and good-natured, and very tender.

4. The catta, or ring-tailed maki, inhabits Madagascar and the neighbouring isles. It is of the fize of a cat; has the hair on the top and hind-part of the head of a deep ash-colour, the back and sides reddish, the belly and infides of the limbs white; all its hair is very foft; close and fine, and erect like the pile of velvet; the tail is twice the length of the body. It is very good natured, and has all the life of a monkey, with out its mischievous disposition; it is very cleanly, and has a weak cry. In a wild flate they go in troops of 30 or 40, and are easily tamed when taken

5. The caudatus-niger, or ruffed maucatico, (the Vari of Buffon), is also an inhabitant of Madagascar. It is fomewhat larger than the last, and has long hair flanding out round the fides of the head like a ruff; a long tail; the colour of the whole animal generally black, but fometimes white spotted with black. In a wild state, it is very fierce; and makes fuch a violent noise in the woods, that the cries of two might be eafily miftaken for the noife made by a hundred.

6. The volans, or flying maucauco, refembles a bat : being furnished with a strong membrane like that animal, by which it is enabled to fly. It inhabits the country about Guzarat, the Molucca ifles, and the Philippines; feeds on the fruits of the trees, and is very diffinet both from the bat and flying squirrel. Its hi-

ftory, however, is very little known.

7. The tarfier of Buffon (ranked by Mr Pennant under this genus) has a pointed vifage; flender nofe, bilobated at the end: eyes large and prominent: ears erect, broad, naked, femitransparent, an inch and a half long, with a tuft of hairs between them on the top of the head, and long hairs on each fide of the nofe and on the upper eye-brow. In each jaw are two cutting and two canine teeth; which form an exception in this genus. There are four long flender toes and a diffinct thumb'on each foot; the thumbs on the hind feet very broad and greatly dilated at their ends : the tail is almost naked; the greater part round and scaly like that of a rat, but growing hairy towards the end, which is tufted. The penis is pendulous; and the ferotum and tefficles are of a vaft fize in proportion to the animal. The length of the animal from nose to tail is near fix inches; to the hind toes eleven and a half, the hind legs, like those of the jerboa, being of a great 5 G

Lenaures length; the tail is nine inches and a half long. It inhabits the remotest islands of India, especially Amboina; and is called by the Macassiars podic.

8. The little maucauco has a rounded head, fharp nofe, long whifkers; two canine teeth in each jaw; four cutting teeth in the upper jaw, fix in the lower: feven grinders on each fide; the nearest sharp, the more diffant lobated : the ears are large, roundish, naked, and membranaceous; the eyes very large and full. The toes are long, and of unequal lengths; the ends round: the nails round, and very fhort; except that of the first toe, which is long and sharp : the tail is hairy, of the length of the body, and prehenfile. The animal is rather lefs than the black rat; and, in Mr Pennant's opinion, feems to be the fame which Buffon calls le rat de Madagascar. It is fupposed to live in the palm-trees, and feed on fruits. It holds its food in its fore-feet like fquirrels; is lively, and has a weak cry; and when it fleeps, it rolls itfelf up.

There are three or four other species; those above described are figured on Plate CCLXVIII.

LEMURES, in antiquity, fprites or hobgoblins; refless ghosts of departed persons, who return to ter-

rify and torment the living.

Thefe are the fame with larves, which the ancients imagined to wander round the world, to frighten good people, and plague the bad. For which reason at Rome they had lemuria or feaths infituted to appeale the manes of the defunct. See Larkes.

Appleius explains the ancient notion of manes thus: the fouls of men releafed from the bands of the body, and freed from performing their bodily functions, become a kind of dæmons or genii, formerly called læmures. Of thee læmures, those that were kind to their families were called læres familiæres; but those who, for their crimes, were condemned to wander continually, without meeting with any place of refl, and terrified good men, and hurt the bad, are vulgarly called lærure.

An ancient commentator on Horace mentions, that the Romans wrote lemures for remures; which last word was formed from Remus, who was killed by his brother Romulus, and who returned to earth to torment him.

But Apuleius observes, that in the ancient Latin tongue lemures fignifies the foul of a man separated from

the body by death.

LEMURIA, or LEMURALIA, a feaft folemnized at Rome on the 9th of May, to pacify the manes of the dead or in honour of the lemures .- It was inftituted by Romulus, to appeale the ghost of his murdered brother Remus, which he thought was continually pursuing him to revenge the horrid crime. - The name lemuria is therefore supposed to be a corruption of Remuria, i. e. the feast of Remus. Sacrifices continued for three nights, the temples were thut up, and marriages were prohibited during the folemnity. A variety of whimfical ceremonies were performed, magical words made use of, and the ghosts defired to withdraw, without endeavouring to hurt or affright their friends above ground. The chief formalities were ablution, putting black beans into their mouths, and beating kettles and pans, to make the goblins keep their diflance.

LENA, a great river of Siberia in Asia, which

takes its rife in N. Lat. 52. 30. and E. Long. 124. 30. from Ferro. After traverling a large tract of land, it divides ittelf into five branches about Lat. 73°. Three of thefe run wettward, and two caltward, by which it difcharges itelf into the Loy Sea. Its three wettern mouths lie in 143° E. Long. from Ferro, but the eaftern ones extend to 153. The current is every where flow, and its bed entirely free from rocks. The bottom is fandy, and the banks are in fome places rocky and mountainous. Sixteen large rivers fall into the Lena during its courfe to the northern ocean.

Lenea, a feltival kept by the Greeks in honour of Bacchus, at which there was much feathing and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedies. The poor goat was generally facrificed on the occasion, and treated with various marks of cruelty and contempt, as being nature.

rally fond of broufing on the vine shoots.

LENFANT (James), a learned French writer born in 1661. After fludying at Saumur, he went to Hei-delberg, where he received imposition of hands for the ministry in 1684. He discharged the functions of this character with great reputation there, as chaplain of the electress dowager Palatine, and pastor in ordinary to the French church. The descent of the French into the Palatinate obliged our author to depart from Heidelberg in 1688. He went to Berlin, where the elector Frederic, afterward king of Prussia, appointed him one of the ministers. There he continued 39 years, diftinguishing himfelf by his writings. He was preacher to the queen of Pruffia, Charlotta Sophia; and after her death, to the late king of Pruffia. In 1707 he took a journey to England and Holland, where he had the honour to preach before Queen Anne; and might have lettled in London, with the title of chaplain to her majesty. In 1712 he went to Helmstadt, in 1715 to Leipsic, and in 1725 to Breslaw, to search for rare books and MSS. It is not certain whether it was he that first formed the defign of the Bibliotheque Germanique, which began in 1720; or whether it was fuggested to him by one of the fociety of learned men, which took the name of Anonymous, and who ordinarily met at his house. He died in 1728. His principal works are, 1. The History of the Council of Constance, 2 vols 4to. 2. A History of the Council of Pifa, 2 vols 4to. 3. The New Testament translated from the Greek into the French, with Notes by Beaufobre and Lenfant, 2 vols 4to. 4. The Hiftory of Pope Joan, from Spanheim's Latin differtation. 5. Several pieces in the Bibliotheque Choisie, La Republic des Lettres, La Bibliotheque Germanique, &c.

LENGLET (Nicholas du Frefnoy, l'abbe), born at Beauvais in France, 1674, was a moit fertile and uffeul French author on a variety of fubjects, hithorical, geographical, political, and philofophical. The following deferve paticular notice: 1. A Method of Studying Hillory, with a Catalogue of the Principal Hillorians of every age and country, published in 1713; a work which established his reputation as art historical writer: it was translated into most of the modern languages, particularly our own, with confiderable improvements, by Richard Rawlinson, LL.D. and F.R.S. and published at London in 1730, in 2 vols 870. 2. A Copious Abridgment of Universal

History.

History and Biography, in chronological order, under the title of Tablettes chronologiques; which made its first appearance at Paris in 1744, in 2 vols fmall 8vo, and was univerfally admired by the literati in all parts of Europe. The author attended with great candour, as every writer ought, to well-founded judicious criticifms. In future editions he made feveral alterations and improvements, and from one of these, we believe that of 1750, an English translation was made, and published at London in 1762, in 2 vols large 8vo. Du Fresnov died in 1755; the Paris edition of 1750 was printed from the author's corrected copy; and the impression being fold off, another edition appeared in 1763, with confiderable improvements by an unknown editor: to the biographical part, a great number of names of respectable persons are added, not to be found in the former edition; and it has this fuperior advantage in the historical parts, that the general history is brought down to the year 1762. Du Frefnov, however, has loaded his work with catalogues of faints, martyrs, councils, fynode, herefies, fchifms, and other ecclefiaftical matters, fit only for the libraries of Popish convents and seminaries.

LENGTH, the extent of any thing material from end to end. In duration, it is applied to any space of

time, whether long or short.

Lenoth

LENGTHENING, in ship-carpentry, the operation of cutting a ship down across the middle, and adding a certain portion to her length. It is performed by fawing her planks afunder in different places of her length, on each fide of the midship frame, to prevent her from being too much weakened in one place. The two ends are then drawn apart to a limited diffance: which must be equal to the proposed addition of length. An intermediate piece of timber is next added to the keel, upon which a fufficient number of timbers are erected, to fill up the vacancy produced by the feparation. The two parts of the kelfon are afterwards united by an additional piece which is fcored down upon the floor-timbers, and as many beams as may be necessary are fixed across the ship in the new interval. Finally, the planks of the fide are prolonged fo as to unite with each other; and those of the ceiling refitted in the fame manner; by which the whole process is completed.

LENEICIA, a strong town of Poland, and capital of a palatinate of the fame name, with a fort feated on a rock. The nobility of the province hold their diet here. It stands in a morafs on the banks of the river Bfura, in E. Long. 19. 25. N. Lat. 52. 12.

LENOX or DUNBARTON Shire, a county of Scotland, stretching 24 miles in length and 20 in breadth. is bounded on the fouth by the river and frith of Clyde, on the west by Lochlong and Argyleshire, on the north by the Grampian hills, and on the east by Monteith and Stirlingshire. Great part of this county confifts of hills and heaths, fit for nothing but pafturage and fport; even in the lower lands, the foil is not extremely fertile: yet the face of the country is agreeably diversified with hill, dale, mountain, heath, Areams, lakes, woods, and fields of corn: the shire is likewife beautified with a great number of agreeable feats and plantations, belonging to gentlemen of fortune. Part of this county is washed by the river Clyde in its course to the sea; even at the castle of Dunbar-

ton, the breadth of it amounts to two miles at high- Lenar, water, and it continues extending in width and depth . until it joins the ocean. From the mouth of the Clyde, the two bays of Lochlong and Lochfyn make large indentations in the shire of Dunbarton. The only river of any confideration that runs through this county, is the Leven, the Lelanonius of Prolemy, otherwise called Levinia, the Latin name for Lenox. The river Leven is a pure transparent pastoral stream, that warbles over a bed of pebbles, through a delightful vale adorned with farms, feats, woods, and plantations. It derives its origin from the great lake called Lochlomond, of which indeed it is the overflowing, and, after a delightful meandring course of five or fix miles, disembogues itself into the Clyde at the castle of Dunbarton. But the greatest curiosity of this county is Lochlomond itself, a vast body of fresh water, supplied by fubterraneous fprings and rivulets, furrounded with huge mountains, extending 25 miles in length, and in fome places five miles in breadth, incredibly deep in every part, interspersed with 24 verdant isles, fome of which are stocked with red deer, and inhabited. Nothing can be more wildly romantic than this part of the country during the fummer-feafon, on the fouth fide of the lake: the high road runs in some places through natural woods; overhung, on one hand, by fleep mountains, covered with flowery heath; and on the other opening in long viftas upon the lake, terminated by green islands that feem to float upon the water. Among the rivers of this shire we shall likewife mention the water of Blane, which, though itfelf an inconfiderable stream, hath been rendered famous by the birth of George Buchanan, the celebrated Latin poet and historian. He was born on the north fide of the lake, not far from the place called Buchanan, where we may behold an elegant feat belonging to the duke of Montrofe, head of the noble family of Graham, so often diftinguished by its loyalty, integrity, and valour. The same part of the country gave birth to the great mathematician and naturalist, Napier, Lord Merchiston, inventor of the logarithms. The title of Lenox, with the property of great part of the shire, was heretofore vested in a branch of the royal family of Stuart, with which it was reunited in the person of King James VI. whose father, Henry Lord Darnly, was fon to the duke of Lenox. This prince conferred the title upon his kinfman Efme Stuart, fon of John Lord d'Aubigney in France : but, his race failing at the death of Charles duke of Lenox and Richmond, and the estate devolving to the crown, King Charles II. conferred both titles on his own natural fon by the duchess of Portsmouth; and they are ftill enjoyed by his posterity. The people of Lenoxshire are chiefly Lowlanders, though in some parts of it divine fervice is performed in the Erfe language. The most numerous clans in this district, are the Macfarlanes, the Colquhouns, and the Buchanans. They generally profess the Protestant faith, according to the Presbyterian discipline; yet some of the gentlemen follow the English ritual. The commonalty are for the most part fober, honest, and industrious; and though they live poorly, are tall, vigorous, and heal-

LENS, a piece of glass, or any other transparent fubstance, the furfaces of which are fo formed, that 3 G 2

the rays of light, by passing through it, are made to change their direction, either tending to meet in a point beyond the lens, or made to become parallel after converging or diverging; or laftly, proceeding as if they had iffued from a point before they fell upon the lens. Some lenfes are convex, or thicker in the middle; fome concave, or thinner in the middle; fome plano-convex, or plano-concave; that is with one fide flat, and the other convex or concave; and fome are called menifcuses, or convex on one side and concave on the other. See DIOPTRICS, p. 33

LENT, a folemn time of falling in the Christian church, observed as a time of humiliation before Easter, the great festival of our Saviour's refurrec-

Those of the Romish church, and some of the Protestant communion, maintain, that it was always a fast of 40 days, and, as fuch, of apostolical institution. Others think it was only of ecclefiaftical inflitution, and that it was variously observed in different churches, and grew by degrees from a fast of 40 hours to a fast of 40 days. This is the sentiment of Morton, Bishop Taylor, Du Moulin, Daille, and

Anciently the manner of observing lent among those who were piously disposed, was to abstain from food till evening: their only refreshment was a supper; and then it was indifferent whether it was flesh or any other food, provided it was used with sobriety and modera-

Lent was thought the proper time for exercifing, more abundantly, every species of charity. Thus what they spared from their own bodies by abridging them of a meal, was usually given to the poor; they employed their vacant hours in vifiting the fick and those that were in prison, in entertaining ffrangers, and reconciling differences. The imperial laws forbad all profecution of men in criminal actions, that might bring them to corporal punishment and torture, during the whole feafon. This was a time of more than ordinary frictness and devotion, and therefore in many of the great churches they had religious affemblies for prayer and preaching every day. All public games and stage-plays were prohibited at this season; as also the celebration of all festivals, birth-days, and marriages, as unfuitable to the prefent occasion.

The Christians of the Greek church observe four lents: the first commences on the 15th of November; the fecond is the fame with our lent; the third begins the week after Whitfuntide, and continues till the festival of St Peter and St Paul; and the fourth commences on the first of August, and lasts no longer than till the 15th. These lents are observed with great firetness and aufterity; but on Saturdays and Sundays they indulge themselves in drinking wine and using oil, which are prohibited on other days.

LENTINI. See LEONTINI. LENTISCUS, in botany. See PISTACIA. LEO, in zoology. See FELIS.

LENTIL, in botany. See ERVUM.

LEO, in aftronomy, the fifth of the 12 figns of the zodiac. The stars in the constellation Leo in Ptolemy's catalogue are 27, besides the informes, which are 8; in Tycho's 30; in the Britannic catalogue 95.

LEO X. whose proper name was John de Medicis. is a pope ever to be remembered by Protestants, as having proved the cause of the reformation begun by Martin Luther. He had been honoured with a cardinal's hat at 14 years of age, and fome years after with the dignity of legate by Julius II. He was in that quality in the army which was defeated by the French near Ravenna in 1512, where he was takenprisoner. The soldiers, who had overcome him, showed him fuch great veneration, that they humbly asked his pardon for gaining the victory, befought him to give them absolution for it, and promifed never to bear arms against the pope. When Pope Julius died, Leo was very ill of the venereal difease at Florence, and was carried to Rome in a litter. His hurrying about every night to the cardinals of his faction, occasioned the breaking of his ulcer; and the matter which ran from it exhaled fuch a ftench, that all the cells in the conclave, which were feparated only by thin partitions, were poisoned by it. Upon this the cardinals consulted the physicians of the conclave, to know what the matter was. They, being bribed, faid the cardinal de Medicis could not live a month; which fentence occasioned his being chosen pope. Thus cardinal de Medicis, then not 30 years of age, was elected pope upon a false information; and as joy is the most sovereign of all remedies, he foon after recovered his health, fo that the old cardinals had reason to repent their credulity .- He was better calculated for a temporal prince, being ambitious, politic, luxurious, a connoisseur in the fine arts, and an accomplished fine gentleman : thus qualified, it is no wonder that foyoung a pontiff, neglecting the true interest of his church, should avail himself of the folly of religious dupes, and publicly fell indulgences to fupport his prodigality, especially as he was known to difbelieve Christianity itself, which he called A very profitable fable for him and his predeceffors. In 1517, he published genneral indulgences throughout Europe (and ordered the priefts to recommend them) in favour of those who would contribute any fum towards completing the church of St Peter; and this was the basis of the reformation. (See LUTHER and INDULGENCE.) Leo died in 1521.

It is but justice to add, that to this pope was principally owing the revival of polite literature in Italy. He spared neither pains nor expence in recovering ancient manufcripts, and procuring good editions of them; he favoured the arts and fciences; and gloried in being the patron of learned and ingenious men, who in return have been very lavish in his praise. Mr Pope, in his effay on Criticism, bestows on him these harmonious lines.

But fee! each mufe in Leo's golden days, Starts from her trance; and trims'her wither'd bays; Rome's ancient Genius, o'er its ruins spread, Shakes off the dust, and rears his rev'rend head. Then Sculpture and her fifter Arts revive : Stones leap to form, and rocks begin to live; With fweeter notes each rifing temple rung ; A Raphael painted, and a Vida fung.

LEO (St), a small but strong town of Italy, in the territory of the church, and duchy of Urbino, with a bishop's fee. It is feated on a mountain, near the river Marrechia, in E. Long, 12. 25. N. Lat. 43. 57.

LEOMINSTER, a town of Herefordshire, in England.

Leon. England, feated on the river Lug, which waters the north and east fides of the town, and over which there are feveral bridges. It is a large, handsome, populous borough; and is a great thoroughfare betwixt South-Wales and London, from which last it is distant 112 measured miles. In King John's reign it was burnt, but foon rebuilt. It was incorporated by Queen Mary, and is governed by a high fleward, bailiff, recorder, 12 capital burgesses (out of whom the bailiff is chosen). and a town clerk. Its market is on Friday, and its fairs, which are all noted for horses and black cattle, on February 13th, Tuefday after Midlent Sunday, May 13th, July 10th, September 4th, and November 1st. The market was on Thursday till it was changed, on a petition from the cities of Hereford and Worcester, complaining of their loss of trade; since which, the valt trade it had in wool and wheat is much lessened. The best flax is faid to grow here, and it has been equally noted for the best wheat, barley, and the finest bread. The inhabitants drive a considerable trade not only in the wool, but in gloves, leather, hatmaking, &c. and there are feveral rivers in and about the town on which they have mills and other machines. Near its church are fome a mains of its priory; and on a neighbouring hill are the ruins of a palace, called to this day Comfort Caffle. It has feveral good inns, and fends two members to parliament, W. Long. 2. 45. N. Lat. 52. 20.

LEON, an ancient town of France, in Lower Bretagne, and capital of the Lyonnois, with a bishop's fee. It is feated near the fea, in W. Long. 3. 55. N.

Lat. 48. 41.

LEON, a province of Spain, with the title of a kingdom; bounded on the north by Afturias; on the west by Galicia and Portugal; and on the fouth by Eftremadura and Castile, which also bounds it on the east. It is about 125 miles in length, and 100 in breadth; and is divided into two almost equal parts by the river Duero, or Douro. It produces all the necessaries of life, and Leon is the capital town.

LEON, an ancient and large episcopal town of Spain, and capital of the kingdom of that name, built by the Romans in the time of Galba. It has the finest cathedral church in all Spain. It was formerly more rich and populous than at prefent, and had the honour of being the capital of the first Christian kingdom in Spain. It is feated between two fources of the river

Efra, in W. Long. 5. 13. N. Lat. 42. 55.

LEON (Peter Cicca de), author of the history of Peru. He left Spain his native country at 13 years of age, in order to go into America, where he refided 17 years; and observed so many remarkable things, that he refolved to commit them to writing. The first part of his hiftory was printed at Seville in 1553. He began it in 1541, and ended it in 1550. He was at Lima, the capital of the kingdom of Peru, when he gave the finishing stroke to it, and was then 32 years of

LEON de Nicaragua, a town of North America, in New Spain, and in the province of Nicaragua; the refidence of the governor, and a bishop's see. It confifts of about 1000 houses, and has several monasteries and nunneries belonging to it. At one end of the town is a lake which ebbs and flows like the fea. The town is feated at the foot of a volcano, which ren-

ders it subject to earthquakes. It was taken by Leonard the buccaneers in 1685, in fight of a Spanish army who were fix to one. W. Long. 86. 10. N. Lat.

LEONARD DE NOBLET (St.) an ancient town of France, in the province of Guienne and territory of Limofin, with a confiderable manufactory of cloth and paper. It is feated on the river Vienne, in E. Long. 1. 35. N. Lat. 45. 50.

LEONARDO DA VINCI. See VINCI.

LEONCLAVIUS (John), one of the most learns ed men of the 16th century, was a native of Weltphalia. He travelled into Turkey, and collected excel-lent materials for composing The Ottoman history; and it is to him the public is indebted for the best account we have of that empire. To his knowledge in the learned languages, he had added that of the civil law ; whereby he was very well qualified to translate the Bafilica. His other versions were esteemed, though critics pretend to have found many faults in them. He died in 1593, aged 60.

LEONIDAS I. king of Sparta, a renowned warrior, flain in defending the firaits of Thermopylæ a-

gainst Xerxes, 480 B. C. See SPARTA.

LEONINE, in poetry, is applied to a kind of verfes which rhime at every hemistic, the middle always chiming to the end. Of which kind we find feveral ancient hymns, epigrams, prophecies, &c .- For inflance, Muretus speaking of the poetry of Lorenzo Gambara of Breffe, fays,

Brixia, vestratis merdosa volumina vatis. Non funt nostrates tergere digna nates. The following one is from the school of Salernum:

Ut vites poenam de potibus incipe conam.

The origin of the word is fomewhat obscure: Pal's quier derives it from one Leoninus or Leonius, who excelled in this way; and dedicated feveral pieces to Pope Alexander III.; others derive it from Pope Leo : and others from the beaft called lion, by reason it is the loftiell of all verfes.

LEONTICA, feafts or facrifices celebrated among the ancients in honour of the fun .- They were called Leontica, and the priefts who officiated at them Leones. because they represented the sun under the figure of a lion radiant, bearing a tiara, and griping in his two fore paws the horns of a bull, who ftruggled with him

in vain to difengage himfelf.

The critics are extremely divided about this feaft. Some will have it anniversary, and to have made its return not in a folar but in a lunar year; but others hold its return more frequent, and give inftances where the period was not above two hundred and twenty days.

The ceremony was fometimes also called Mithriaca: Mithras being the name of the fun among the ancient Persians. There was always a man sacrificed at thesefeafts, till the time of Hadrian, who prohibited it by a law. Commodus introduced the custom afresh, after

whose time it was again exploded.

LEONTICE, LION'S LEAF: A genus of the monogynia order, belonging to the hexandria class of plants; and in the natural method ranking under the 24th order, Corydales. The corolla is hexapetalous; the nectarium hexaphyllous, standing on the heels of the corolla, with its limb patent; the calyx hexaphyl-

Leontini lous, and deciduous. There are four foecies, natives 42d order, Verticillate. The anthere are powdered Leonurus of the fouthern parts of Europe, two of which are with shining points, or small elevated globular par-Lepanto.

1. The chryfogonum with winged leaves; and, 2. The leontopetalum with decompounded leaves. Both those plants are natives of the Archipelago iflands, and also growinthe corn-fields about Aleppoin Syria, where they flower foon after Christmas. They have large tuberous roots like those of the cyclamen, covered with a darkbrown bark. The flowers fit upon naked footstalks: those of the first fort fustain many yellow flowers, but the flowers of the fecond are of a paler colour. Both fpecies are propagated by feeds, which must be fown foon after they are ripe, otherwise they seldom succeed. When fent to diffant countries, they must be preserved in fand. The plants are, however, very difficult to be preferved in this country : for they will not thrive in pots; and when they are planted in the full ground, frost frequently destroys them. The best way is to fow the feed as foon as it comes from abroad, covering it with glaffes in the winter to protect it from froft; and, in the fpring, when the plants begin to appear, they must have free air admitted to them at all times when the weather is mild, otherwise they will be weak.

LEONTINI, or LEONTIUM (anc. geog.), a town of Sicily on the fouth fide of the river Terias, 20 miles north-west of Syracuse. The territory, called Campi Leontini, was extremely fertile (Cicero): these were the Campi Lastrigonii, anciently so called; the seat of the Læftrigons, according to the commentators on the poets. The name Leontini is from Leo, the impression on their coin being a lion. Now called Lentini, a town fituated in the Val di Noto, in the fouth-east of Sicily.

LEONTIUM, one of the twelve towns of Achaia, whether on, or more distant from, the bay of Corinth, is uncertain. Leontium of Sicily. See LEONTINI.

LEONTODON, DANDELION: A genus of the polygamia æqualis order, belonging to the fyngenefia class of plants; and in the natural method ranking under the 49th order, Composite. The receptacle is naked; the calyx imbricated, with the scales somewhat loofe; the pappus feathery. There are nine species, of which the only remarkable one is the Taraxacum, the green-house. or common dandelion, found on the road fides, in paflures, and on the banks of ditches. Early in the fpring, the leaves whilst yet white and hardly unfolded are an excellent ingredient in falads. The French eat the roots and tender leaves with bread and butter. Children that eat it in the evening experience its diuretic effects in the night, which is the reason that other European nations as well as ourfelves vulgarly call it pifs-a-bed. When a fwarm of locuits had destroyed the harvest in the island of Minorca, many of the inhabitants fubfifted upon this plant. The expressed juice has been given to the quantity of four ounces three or four times a day; and Boerhaave had a great opinion of the utility of this and other lactescent plants in vifceral obstructions. Goats eat it; fwine devour it greedily; sheep and cows are not fond of it, and horses refuse it. Small birds are fond of the seeds.

LEONURUS, LION'S-TAIL: A genus of the gymnospermia order, belonging to the didynamia class of

Species. 1. The Africana, with spear shaped leaves, is a native of Ethiopia. It rifes with a shrubby stalk feven or eight feet high, fending out feveral four cornered branches, garnished with oblong narrow leaves. acutely indented on their edges, hairy on their upper fide, and veined on the under fide, flanding opposite. The flowers are produced in whorls, each of the branches having two or three of these whorls towards their ends. They are of the lip kind, shaped somewhat like those of the dead nettle; but are much longer, and covered with short hairs. They are of a golden fearlet colour, fo make a fine appearance. The flowers commonly appear in October and November. and fometimes continue till the middle of December, but are not fucceeded by feeds in this country. There is a variety with variegated leaves which is admired by fome, but the whorls of flowers are smaller than those of the plain fort. 2. The nepetæfolia, with oval leaves, is a native of the Cape of Good Hope. This rifes with a fquare shrubby stalk about three feet high, fending out feveral four-cornered branches, garnished with oval crenated leaves, rough on their under fide like the dead-nettle, but veined on the upper fide, and placed opposite. The flowers come out in whorls like those of the former fort, but are not fo long nor fo deep coloured. They appear at the fame feafon with the first, and continue as long in beauty. There are three other species, but the above are the most remarkable.

Culture. Both forts are propagated by cuttings, which should be exposed to the air long enough to harden the shoots, and planted in the beginning of July, after which they will take root very freely. They should be planted in a loamy border to an caflern aspect; and if they are covered closely with a bell or hand-glass to exclude the air, and shaded from the fun, it will forward their putting forth roots. As foon as they have taken good root, they should be taken up and planted each in a separate pot filled with foft loamy earth, and placed in the shade till they have taken new root. In October they must be removed into

LEOPARD. See FELIS.

LEOPARD's Bane, in botany. See DORONICUM.

LEPANTO, a ftrong and very confiderable town of Turkey in Europe, and in Livadia, with an archbishop's see and a strong fort. It is built on the top of a mountain, in form of a fugar-loaf; and is divided into four towns, each furrounded by walls, and commanded by a castle on the top of the mountain. The harbour is very fmall, and may be shut up by a chain, the entrance being but 50 feet wide. It was taken from the Turks by the Venetians in 1687; but was afterwards evacuated, and the caftle demolished in 1699, in consequence of the treaty of Chilowitz. It was near this town that Don John of Austria obtained the famous victory over the Turkish fleet in 1571. The produce of the adjacent country is wine, oil, corn, and rice. Turkey leather is also manufactured here. The wine would be exceedingly good if they did not pitch their veffels on the infide, but this renders the plants; and in the natural method ranking under the tafte very difagreeable to those who are not accu-

Lepium.

here, and the Greeks two churches. It is feated on a gulph of the fame name, in E. Long. 22, 13. N.

Lat. 38. 34.

LEPAS, the ACORN, in zoology; a genus belonging to the order of vermes testacea. The animal is the triton; the shell is multivalve, unequal, fixed by a ftem or fessile. There are several species, of which the most remarkable is the anatifera, confisting of five thells depressed, affixed to a pedicle and in clusters. It adheres to the bottom of ships by its pedicles. The tentacula from its animal are feathered; and have given the old English historians and naturalists the idea of a bird. They afcribed the origin of the barnacle goofe to those shells. See Plate CCLXIII.

LEPIDIUM, DIFTANDER, or Pepper wort: A genus of the filiculofæ order, belonging to the tetradynamia class of plants; and in the natural method ranking under the 39th order, Siliquofa. The filicula is emarginated, cordated, and polyspermous, with the valves carinated contrary or broader than the partition. There are to species, of which the only remarkable one is the latifolium or common dittander. This is a native of many parts both of Scotland and England. It hath fmall, white, creeping roots, by which it multiplies very fast, and is difficult to be eradicated after it has long grown in any place. The stalks are smooth, rife two feet high, and fend out many fide-branches. The flowers grow in close bunches towards the top of the branches, coming out from the fide; they are fmall, and composed of four small white petals. The feeds ripen in autumn. The whole plant has a hot biting tafte like pepper; and the leaves have been often used by the country people to give a relish to their viands instead of that spice, whence the plant has got the appellation of poor man's pepper. It is reckoned an antiscorbutic, and was formerly used instead of the horse

LEPIDOPTERA, in zoology, an order of infects, with four wings, which are covered with imbricated

fquamulæ. See Zoology.

LEPISMA, in zoology; a genus of apterous infects, the characters of which are : They have fix feet formed for running; the mouth is furnished with four palpi, two of which are cetaceous and two capitated: the tail is terminated by extended briftles, and the body imbricated with scales. There are 7 species. The faccharina (Plate CCLXXIV.) is an American species, fo called because mostly found among sugar; but now common in Europe. It is of a leaden colour, but rather inclining to that of filver, by reason of the small filvery fcales with which it is covered; by which fame circumstance it resembles, especially in its under part, the filver fish. It is found in gardens, under boxes, and in the crevices of window-fashes in houses, where it is very common. It runs with great fwiftness, and is difficult to catch. When touched it loses part of its scales, and its softness makes it easy to crush,

LEPIUM, in natural history, a genus of fossils of the harder gypfum, composed of very small particles,

and of a lefs glittering hue.

There is only one species of this genus, being one of the leaft valuable and most impure of the class of gyplums. It is of an extremely rude, irregular, coarfe, and unequal firucture; a little foft to the touch, of a.

Lepas stomed to it. The Turks have fix or seven mosques very dull appearance, and of different degrees of a Leprofy greyish white. It is burnt in plaster for the coarser works; it calcines very flowly and unequally, and makes but a very coarfe and ordinary platter.

LEPROSY, a foul cutaneous difeafe, appearing in dry, white, thin, fcurfy fcabs, either on the whole body, or only fome part of it, and usually attended with a violent itching and other pains. See (the Index

fubioined to) MEDICINE.

The leprofy is of various kinds, but the Jews were particularly subject to that called Elephantiasis. Hence the Jewish law excluded lepers from communion with mankind, banishing them into the country or uninhabited places, without excepting even kings. When a leper was cleanfed, he came to the city gate, and was there examined by the priests; after this he took two live birds to the temple, and fastened one of them to a wisp of cedar and hyslop tied together with a scarlet ribbon; the fecond bird was killed by the leper, andthe blood of it received into a veffel of water; with this water the priest sprinkled the leper, dipping the wifp and the live bird into it: this done, the live bird was let go; and the leper, having undergone this ceremony, was again admitted into fociety and to the ufe of things facred. See Levit. xiii. 46. 47. and Levit. xiv. 1. 2. &c.

LEPTODECORHOMBES, in natural history, a genus of fossils of the order of the selenitæ; confisting of 10 planes, each fo nearly equal to that opposite to it as very much to approach to a decahedral parallelo-

pepid, though never truly or regularly io.

Of this genus there are only five known species. 1. A thin, fine, pellucid, and slender streaked one, with transverse striæ, found in considerable quantities in the strata of clay in most parts of England, particularly near Heddington in Oxfordshire. 2. A thing dull-looking, opaque, and flender-streaked one, more scarce than the former, and found principally in Leicettershire and Staffordshire. 3. A thin fine-streaked one, with longitudinal strize, found in the clay pits at: Richmond, and generally lying at great depths. This has often on its top and bottom a very elegant smaller rhomboide, described by four regular lines. 4. A rough kind, with thick transverse striæ, and a scabrous furface, very common in Leicestershire and. Yorkshire. And, 5. A very short kind, with thick. plates, common in the clay-pits of Northamptonshire. and Yorkshire.

LEPTOPOLYGINGLIMI, in natural history, a. genus of fosiil shells, distinguished by a number of minute teeth at the cardo; whereof we find great. numbers at Harwich-cliff, and in the marle-pits of

LEPTUM, in antiquity, a fmall piece of money, which, according to fome, was only the eighth part of an obolus; but others will have it to be a filver or

brafs drachm.

LEPTURA, in zoology, a genus of infects belonging to the order of coleoptera, the characters of which are these: - The feelers are briftly; the elytraare attenuated towards the apex: and the thorax is fomewhat cylindrical. There are 25 species, principally diftinguished by their colour.

LEPUS, in zoology, a genus of quadrupeds belonging to the order of glires. The characters are

thefe ::

Lepus. there: - They have two fore-teeth in each law: those have is not so savage as his manners would indicate. He Lepus. in the upper-jaw are double, the interior ones being is gentle, and is susceptible of a kind of education. He

I. The timidus, or common hare, has a fhort tail: the points of the ears are black : the upper-lip is divided up to the nostrils; the length of the body is generally about a foot and a half; and the colour of the hair is reddish, interspersed with white. The hare is naturally a timid animal. He fleeps in his form or feat during the day; and feeds, copulates, &c. in the night. In a moon light evening, a number of them are fometimes feen fporting together, leaping and purfuing each other: But the least motion, the falling of fwift in their motion, which is a kind of gallop, or a fuccession of quick leaps. When pursued, they always take to the higher grounds: as their fore-feet are much shorter than the hind ones, they run with more ease up bill than down-hill. The hare is endowed with all those instincts which are necessary for his own prefervation. In winter he chooses a form exposed to the fouth, and in fummer to the north. He conceals himself among vegetables of the same colour with himfelf. Mr Fouilloux fays, that he observed a hare, as foon as he heard the found of the horn, or the noffe of the dogs, although at a mile's distance, rife from her feat, fwim acrofs a rivulet, then lie down among the bushes, and by this means evade the fcent of the dogs. After being chased for a couple of hours, a hare will fometimes push another from his form, and lie down in it himself. When hard pressed, the hare will mingle with a flock of fleep, run up an old wall and conceal himself among the grass on the top of it, or crofs a river feveral times at small distances. He never runs against the wind, or straight forward; but conflantly doubles about, in order to make the dogs lofe their fcent.

It is remarkable that the hare, although ever fo frequently purfued by the dogs, feldom leaves the place where the was brought forth, or even the form in which the usually fits. It is common to find them in the same place next day, after being long and keenly chased the day before. The females are more grofs, than the males, and have lefs ftrength and agility; they are likewise more timid, and never allow the dogs to approach fo near their form before rifing as the males. They likewife practife more arts, and double more frequently than the males.

The hare is diffused almost over every climate; and, notwithstanding they are every where hunted, their species never diminishes. They are in a condition of propagating the first year of their lives; the females go with young about 30 days, and produce four or five at a time; and as foon as they have brought forth, they again admit the embraces of the male; fo that they may be faid to be always pregnant. The eyes of the young are open at birth; the mother fuckles them about 20 days, after which they feparate from her, and procure their own food. The young never go far from the place where they were brought forth; but still they live folitary, and make forms about 30 paces diffant from each other: Thus, if a young hare collect together, and are feen in troops of five or fix be found any-where, you may almost be certain of hundred, migrating in spring, and returning in autumn. finding feveral others within a very small distance. The They are compelled to this by the want of subsistence.

Nº 180.

is pretty eafily tamed, and will even show a kind of attachment to the people of the house: But still this attachment is not fo ftrong or lafting as to engage him to become altogether domestic; for although taken when very young, and brought up in the house, he no fooner arrives at a certain age, than he takes the first opportunity of recovering his liberty, and slying to the fields. The hare lives about feven or eight years. He feeds upon grafs and other vegetables. His flesh is excellent food.

Hares are very subject to fleas. Linnœus tells us, a leaf, alarms them; and then they all run off separate-ly, each taking a different route. They are extremely of the fur; which, by attracting these insects, preferves the wearer from their troublesome attacks. The hair of this creature makes a great article in the hatmanufacture; and, as our country cannot fupply a fufficient quantity, a great deal is annually imported from Ruffia and Siberia. The hare was reckoned a great delicacy among the Roman; the Britons, on the contrary, thought it impious even to tafte it : yet this animal was cultivated by them, either for the pleafure of the chace, or for the purposes of superstition a as we are informed, that Boadicea, immediately before her last conflict with the Romans, let loofe a hare she had concealed in her bosom, which taking what was deemed a fortunate course, animated her soldiers by the omen of an easy victory over a timid enemy.

2. The variabilis, or varying here of Pallas, has foft hair, which in fummer is grey, with a flight mixture of black and tawny: the ears are fhorter, and the legs more slender, than those of the common hare ; the tail is entirely white, even in fummer; and the feet are most closely and warmly furred. In winter, the whole animal changes to a fnowy whiteness, except the tips and edges of the ears, which remain black, as are the foles of the feet, on which, in Siberia, the fur is doubly thick, and of a yellow colour. It is less than the common species.-These animals inhabit the highest Scottish Alps, Norway, Lapland, Russia, Siberia, Kamtschatka, and the banks of the Wolga, and Hudsou's-Bay. In Scotland, they keep on the tops of the highest hills, and never descend into the vales; nor do they ever mix with the common hare, though these abound _ in this neighbourhood. They do not run fast : and are apt to take shelter in clefts of rocks. They are eafily tamed, and are full of frolic. They are fond of honey and carraway comfits; and they are observed to eat their own dung before a ftorm. This species changes its colour in September; resumes its grey coat in April; and in the extreme cold of Greenland only is always white. Both kinds of hares are common in Siberia, on the banks of the Wolga, and in the Orenburg government. The one never changes colour: the other, native of the same place, constantly assumes the whiteness of the snow during winter, This it does, not only in the open air and in a state of liberty, but, as experiment has proved, even when kept tame, and preferved in houses in the stove-warmed apartments, in which it experiences the fame changes of colour as if it had dwelt on the fnowy plains .- They

quitting in the winter the lofty hills, the fouthern in proportion than those of the varying hare : the for Lepus, boundaries of Siberia, and feek the plains and northern wooded parts, where vegetables abound; and towards fpring feek again the mountainous quarters.

Mr Muller fays, he once faw two black hares, in Siberia, of a wonderful fine gloss, and of as full a black as jet. Near Cafan was taken snother, in the middle of the winter 1768. These specimens were much lar-

ger than the common kind.

In the fouthern and western provinces of Russia is a mixed breed of hares, between this and the common fpecies. It fuftains, during winter only, a partial loss of colour: the fides, and more exposed parts of the ears and legs, in that feafon becoming white; the other parts retaining their colours. This variety is unknown beyond the Urallian chain. It is called by the Ruffians ruffack; they take them in great numbers in fnares, and export their skins to England and other places for the manufacture of hats. The Ruffians and Tartars, like the Britons of old, hold the flesh of hares in detellation, esteeming it impure: that of the variable, in its white flate, is excessively insipid.

There have been feveral inflances of what may be called monsters in this species, horned hares, having excrescences growing out of their heads, like to the horns of the roe-buck. Such are those figured in Gesner's hiflory of quadrupeds, p. 634; in the Museum Regium Hafnia, no 48. tab. iv; and in Klein's history of quadrupeds, 32. tab. iii.; and again described in Wormius's museum, p. 321, and in Grew's museum of the Royal Society. These instances have occurred in Saxo-

ny, in Denmark, and near Aftracan,

3. The Americanus, American hare, or hedge-coney, has the ears tipt with grey: the upper part of the tail is black, the lower white: the neck and body are mixed with cinereous, ruft-colour, and black ; the legs are of a pale ferruginous colour; and the belly is white : the forelegs are shorter, and the hind legs longer, in proportion, than those of the common hare. In length it is 18 inches; and weighs from 3 to 41 pounds. - This species inhabits all parts of North America. In New Jersey, and the colonies south of that province, it retains its colour the whole year. In New England, Canada, and about Hudson's Bay, at the approach of winter, it changes its short summer's fur for one very long, filky, and filvery, even to the roots of the hairs; the edges of the ears only preferving their colour. At that time these hares are in the highest season for the table; and are of vast use to those who winter in Hudfon's-Bay, where they are taken in great abundance in springes made of brass-wire, to which they are led by a hedge made for that purpose, with holes left before the snares for the animals to pass through .- They breed once or twice a year, and have from five to feven at a time. They do not migrate, like the preceding; but always haunt the fame places : neither do they burrow; but lodge under fallen timber, and in hollow trees. They breed in the grafs; but in fpring shelter their young in the trees, to which they also run when purfued; from which, in the fouthern colonies, the hunters force them by means of a hooked flick, or by making a fire, and driving them out by the smoke.

4. The tolai, or Baikal hare, has a tail longer than that of a rabbit; and the ears are longer in the male

Vol. IX. Part II.

is of the colour of the common hare; and the fize between that of the common and the varying hare. It inhabits the country beyond lake Baikal, and extends through the great Gobee even to Thibet. The Tanguts call it Rangwo, and confecrate it among the fpots of the moon. The Mongols call it Tolai. It agrees with the common rabbit in colour of the flesh; but does not burrow, running instantly (without taking a ring as the common hare does) for shelter, when purfued, into holes of rocks. The fur is bad, and of no use in commerce.

5. The Capenfis, or Cape hare, has long ears dilated in the middle; the outfides naked, and of a rofe colour, the infide and edges covered with short grey hairs: the crown and back are of a dufky colour mixed with tawny; the cheeks and fides cinereous; the breaft, belly, and legs, ruft-coloured : the tail is bufhy, carried upwards; and of a pale ferruginous colour. The animal is about the fize of a rabbit. It inhabits the country three days north of the Cape of Good Hope; where it is called the mountain bare, for it lives only in the rocky mountains, and does not burrow. It is difficult to shoot it, as it instantly, on the fight of any one, runs into the fiffures of the rocks.

Allied to this, in Mr Pennant's opinion, feems the viscachos, or viscachas, mentioned by Acosta and Feuillée, in their accounts of Peru: they compare them to hares or rabbits. The last fays, they inhabit the colder parts of the country. Their hair is very foft, and of a mouse-colour; the tail is pretty long, and turns up; and the ears and whilkers are like those of the common rabbit. In the time of the Incas, the hair was fpun, and wove into cloth, which was so fine as to be used

only by the nobility.

6. The cuniculus, or rabbit, has a very fhort tail, and naked ears. The colour of the fur, in a wild state, is brown; the tail black above, white beneath: in a tame ftate the general colour varies to black, pied, and quite white; and the eyes are of a fine red. The native country of this species is Spain, where they were formerly taken with ferrets, as is practifed in this country at present. They love a temperate and warm climate, and are incapable of bearing great cold; so that in Sweden they are obliged to be kept in houses. They abound in Britain. Their furs make a considerable article in the hat manufactories; and of late fuch part of the for as is unfit. for that purpose, has been found as good as feathers for stuffing beds and bolsters. Numbers of the skins are annually exported into China. The English counties most noted for rabbits are Lincolnshire, Norfolk, and Cambridgeshire. Methold, in the last county, is famous for the best kind for the table : the foil there is fandy, and full of mosses and the carex grass. Rabbits fwarm in the ifles of Orkney, where their skins form a confiderable article of commerce. The rabbits of those isles are in general grey; those which inhabit the hills grow hoary in winter.

The variety called the filver haired rabbit was formerly in great efteem for lining of clothes, and their fkine were fold for 3s. a-piece; but fince the introduction of more elegant furs, their price has fallen to 6d. 'The Sunk Island in the Humber was once famous for a moufe-coloured fort, which has fince been extirpated

LEP Lepus, by reason of the injury they did to the banks by bur-

rowing. Other varieties are, The Angora rabbit, with hair long, waved, and of a filky finenels, like that of the goat of Angora :- and the Hooded Rabbit, described by Edwards as having a double fkin over the back into which it can withdraw its head, and another under the throat in which it can

place its forefeet: it has fmall holes in the loofe fkin on the back, to admit light to the eyes. The colour of the body is cinereous; of the head and ears, brown.

The feeundity of the rabbit is still greater than that of the hare. They will breed feven times in the year, and the female fometimes brings eight young ones at a time. Supposing this to happen regularly for four years, the number of rabbits from a fingle pair will amount to 1,274,840. By this account we might justly apprehend being overstocked with these animals : but a great number of enemies prevents their increase; not only men, but hawks and beafts of prey making dreadful havoc among them. Notwithstanding all these different enemies, however, we are told by Pliny and Strabo, that they once proved fuch a miliance to the inhabitants of the Balearic islands, that they were obliged to implore the affiftance of a military force from Augustus in order to exterminate them. They deyour herbage of all kinds, roots, grain, fruits, &c. They are in a condition for generating at the end of fix months; and, like the hare, the female is almost conflantly in feafon; the goes with young about 30 days, and brings forth from four to eight at a litter. A few days before littering, the digs a hole in the earth, not in a straight line, but in a zig-zag form: the bottom of this hole the enlarges every way, and then pulls off a great quantity of hair from her belly, of which she makes a kind of bed for her young. During the two first days after birth, she never leaves them, but when pressed with hunger, and then she eats quickly and returns: and in this manner she suckles and attends her young for fix weeks. All this time both the hole and the young are concealed from the male; fometimes, when the female goes out, she, in order to deceive the male, fills up the mouth of the hole with earth mixed with her own urine. But when the young ones begin to come to the mouth of the hole, and to eat fuch herbs as the mother brings to them, the father feems to know them: he takes them betwixt his paws, smooths their hair, and caresses them with great

The following species are without tails.

7. The Alpinus, or Alpine rabbit, has short, broad, rounded ears; a long head, and very long whifkers, with two very long hairs above each eye: the colour of the fur at the bottom is dusky, towards the ends of a bright ferruginous colour; the tips white, and intermixed are several long dusky hairs, though on first inspection the whole seems of a bright bay. The length of the animal is nine inches. This species is first seen on the Altaic chain; extends to lake Baikal; from thence to Kamtschatka; and, as is said, found in the new-discowered Fox or Aleutian islands. They inhabit always the middle region of the fnowy mountains, in the rudest places, wooded and abounding with herbs and moisture. They sometimes form burrows between the rocks, and oftener lodge in the crevices. They are generally found in pairs: but in cloudy weather they

whistle, so like that of a sparrow, as to deceive the Lepus-On the report of a gun, they run into their holes; but foon come out again, supposing it to be a clap of thunder, to which they are so much used in their lofty habitations. By wonderful instinct they make a provision against the rigorous scason in their inclement feats. A company of them, towards autumn, collect together vast heaps of choice herbs and graffes, nicely dried, which they place either beneath the over-hanging rocks, or between the chalms, or round the trunk of fome tree. The way to these heaps is marked by a worn path. In many places the herbs appeared scattered, as if to be dried in the sun and harvested properly. The heaps are formed like round or conoid ricks; and are of various fixes, according to the number of the fociety employed in forming them. They are fometimes of a man's height, and many feet in diameter, but usually about three feet. Without this provision of winter's stock they must perish, being prevented by the depth of fnow from quitting their retreats in quest of food. They felect the best of vegetables, and crop them when in the fullest vigour, which they make into the best and greenest hay by the judicious manner in which they dry it. These ricks are the origin of fertility amidst the rocks; for the reliques, mixed with the dung of the animals, rot in the barren chafms, and create a foil productive of vegetables. These ricks are also of great service to those people who devote themfelves to the laborious employment of fable-hunting : for being obliged to go far from home, their horses would often perish for want if they had not the provision of these little industrious animals to support them; which is easily to be discovered by their height and form, even when covered with fnow. It is for this reason that this little creature has a name among every Siberian and Tartarian nation, which otherwise would have been overlooked and defpifed. The people of Jakutz are faid to feed both their horses and cattle with the reliques of the winter stock of these hares. These animals are neglected as a food by mankind; but are the prey of fables and the Siberian weefel, which are joint inhabitants of the mountains. They are likewife greatly infefted by a fort of gadfly, which lodges its egg in their skin in August and September, which often proves destruc-

8. The ogotona has oblong oval ears, a little pointed with shorter whiskers than the former, and hairs long and fmooth: the colour of those on the body is brown at the roots, light grey in the middle, and white at the ends intermixed with a very few dufky hairs: there is a yellowish spot on the nose, and space about the rump of the same colour : the outside of the limbs are vellowish; the belly is white. The length is about fix inches: weight of the male, from 61 to 72 ounces; of the female, from 4 to 43. This species inhabits only the country beyond lake Baikal, and from thence is common in all parts of the Mongolian defert, and the vaft defert of Gobèe, which extends on the back of China and Thibet, even to India. It frequents the open valleys and gravelly or rocky naked mountains. These little creatures are called by the Mongols Ogotona; and are found in vaft abundance. They live under heaps of ftones; or burrow in the fandy foil, leaving two or three entrances, which all run obliquely. They make a nest of foft grass; and the old females make for secollect together, and lie on the rocks, and give a keen curity a number of burrows near each other, that they

wander out chiefly in the night. Their voice is exceffively shrill, and emits a note like that of a sparrow, twice or thrice repeated, but very eafily to be diftinguished from that of the Alpine rabbit. They live principally on the tender bark of a fort of fervice and the dwarf-elm; in the fpring, on different herbs. Before the approach of fevere cold, in the early fpring, they collect great quantities of herbs, and fill their holes with them, which the inhabitants of the country consider as a fure fign of change of weather. Directed by the same instinct with the former species, they form in autumn their ricks of hay of a hemispherical shape, about a foot high and wide : in the foring thefe elegant heaps disappear, and nothing but the relicts are feen. They copulate in the fpring, and about the latter end of June their young are observed to be full grown. They are the prey of hawks, magpies, and See Felis. owls : but the cat Manul + makes the greatest havock among them; and the ermine and fitchet are equally

their enemy. Q The pufillus, or calling rabbit, with a long head thickly covered with fur even to the tip of the nofe; numerous hairs in the whifkers; ears large and rounded; legs very short, and the soles furred beneath: its whole coat is very foft, long, and fmooth, with a thick, long, fine down beneath, of a brownish lead-colour; the hairs are of the same colour, towards the ends of a light grey and tipt with black; the lower part of the body is hoary: the fides and ends of the fur are yellowish. The length of the animal is about fix inches: weight from 3.7 to 41 oz. but in winter scarcely 21. This species inhabits the fouth-east parts of Russia, and about all the ridge of hills spreading southward from the Urallian chain; also about the Irtish, and in the west part of the Altaic chain; but no where in the east beyond the Oby. They delight in the most funny valleys and herby hills, especially near the edges of woods, to which they run on any alarm. They live in fo concealed a manner as very rarely to be feen; but are often taken in winter in the snares laid for the ermines; fo are well known to the hunters. About the Volga they are called femlanoi Saetshik, or ground hare : ittfit/kan, or the barking moufe: the Kalmucs call them rufla. They choose for their habitations a dry spot, amidst bushes covered with a firm fod, preferring the weftern fides of the hills. In these they burrow, leaving a very small hole for the entrance; and forming long galleries, in which they make their nefts. Those of the old ones and females are numerous and intricate: fo that their place would be fcarcely known but for their excrements; and even those they drop, by a wife instinct, under some bush, lest their dwelling should be discovered by their enemies among the animal creation. Their voice alone betrays their abode; it is like the piping of a quail, but deeper, and fo loud as to be heard at the distance of half a German mile, often fix. The voice is emitted at night and morning; in the day, except in rainy and cloudy weather. It is common to both fexes; but the female is filent for some time after parturition, which is about the

Lepus. may if diffurbed retreat from one to the other. They time, blind and naked; which she suckles often, and Lepus covers carefully with the materials of her nest. These most harmless and inostentive animals never go from their holes. They feed and make their little excurfions by night: they are eafily made tame; and will fcarcely bite when handled. The males in confinement are observed to attack one another, and express their anger by a grunting noife.

There are three or four other species of Lepus. Se-

veral are figured on Plate CCLXIX.

LEPUS, the hare, in altronomy, a conftellation of the fouthern hemisphere : whose stars in Ptolemy's catalogue are 12; in that of Tycho's 12; and in the Britannic 10.

LERCHEA, in botany; a genus of the pentandria order, belonging to the monodelphia class of plants. The calvx is five toothed; the corolla funnel-shaped and quinquefid; there are five antheræ fitting on the tube of the germ; there is one flyle; the capfule trilocular and polyspermous.

LERI (John de), a Protestant minister of the province of Burgundy. He was studying at Geneva when it was reported there that Villegagnon defired they would fend him fome pastors into Brazil. His made that voyage with two ministers, whom the church of Geneva fent thither in 1556; and wrote an account of that voyage, which has been much commended by Thuanus and others.

LERIA, or LEIRIA, a strong town of Estremadura in Portugal, with a castle and bishop's see. It contains about 3500 inhabitants, and was formerly the refidence of the kings of Portugal. W. Long. 7, 50.

N. Lat. 39. 40. LERIDA, an ancient, strong, and large town of Spain, in Catalonia, with a bishop's see, an university, and a firong caftle. This place declared for king Charles after the reduction of Barcelona in 1705; but it was retaken by the duke of Orleans in 1707, after the battle of Almanza. It is feated on a hill near the river Segra, and in a fertile foil, in E. Long. 0. 35.

N. Lat. 41. 31: LERINA, or PLANASIA, (anc. geog.), one of the two fmall islands over against Antipolis, called also Lethe Tartars, from their voice, flyle them thebothebot or rinas and Lirinus. Now St Honorat, on the coast of Province, scarce two leagues to the fouth of Antibes.

LERINS, the name of two islands in the Mediterranean fea, lying on the coast of Provence in France, five miles from Antibes; that near the coast, called St Margaret, is guarded by invalids, flate-prisoners being fent here. It was taken by the English in 1746, but marshal Belleisle retook it in 1747. The other is called St Honorat; and is lefs than the former, but has a Benedictine abbey.

LERMA, a town of Spain, in Old Castile, seated on the river Arlanza, with the title of a duchy. W. Lon.

3. 5. N. Lat. 42. 2. LERNA, (anc. geog.), not far from Argos, on the confines of Laconica; fupposed to be a town of Laco-It is repeated by just intervals, thrice, four times, and . nica, but on the borders of Argolis; the polition which Paufanias allots to it, near Temenium, on the fea; without adding whether it is town, river, or lake. According to Strabo, it is a lake, fituated between the territories of Argos and Mycene, in contradiction to beginning of May N. S. She brings forth fix at a Paulanias. If there was a town of this name, it

5 H 2

feems to have flood towards the fea, but the lake to have been more inland. Mela calls it a well-known town on the Sinus Argolicus; and Statius by Lerna feems to mean fomething more than a lake. This, however, is the lake in which, as Strabo favs, was the fabled Hydra of Hercules: therefore called Lerna Anguifera (Statius). The lake runs in a river or ftream to the fea, and perhaps arifes from a river, (Virgil.) From the lake the proverb, Lerna Malorum, took its rife; because, according to Strabo, religious purgations were performed in it; or, according to Helychius, because the Argives threw all their filth into it.

LERNEA, in zoology; a genus of infects of the order of Vermes mollusca, the characters of which are: The body fixes itfelf by its tentacula, is oblong, and rather tapering; there are two ovaries like tails, and the tentacula are shaped like arms. (See three specimens sigured on Plate CCLXXIV.)-1. The cyprinacea has four tentacula, two of which are lunulated at the top. It is a small species; about half an inch long, and of the thickness of a small straw: the body is rounded, of a pale greyish white, glosfy on the furface, and fomewhat pellucid: it is thrust out of a kind of coat or fheath, as it were at the base, which is of a white colour and a thick fkin : towards the other extremity of the body, there are three obtuse tubercules, one of which is much larger than the rest: the mouth is fituated in the anterior part, and near it there are two foft and fleshy processes; and near these there is also on each fide another foft process, which is lunated at the extremity. It is found on the fides of the bream, carr, and roach, in many of our ponds and rivers, in great abundance. 2. The falmonea, or falmon-loufe, has an ovated body, cordated thorax, and two linear arms approaching nearly to each other. 3. The afellina, has a lunated body and cordated thorax; and inhabits the gills of the cod-fifth and ling of the northern ocean.

LERNICA, formerly a large city in the island of Cyprus, as appears from its ruins; but is now no more than a large village, feated on the fouthern coaft of that ifland, where there is a good road, and a fmall fort for its defence.

LERO (anc. geog.); one of the two fmall islands in the Mediterranean, opposite to Antipolis, and half a mile distant from it to the fouth. Now St Margarita, over against Antibes, on the coast of Provence.

LERO, or Leros, an island of the Archipelago, and one of the Sporades; remarkable, according to some authors, for the birth of Patroclus. E. Long.

26. 15. N. Lat. 37. 0. LE ROY LE VEUT, the king's affent to public bills. See the articles BILL, STATUTE, and PARLIA-

LERWICK, the capital town of Shetland, fituated in the island called the Mainland, in W. Long. 1. 30. N. Lat. 61. 20. It contains about 300 families, with abundance of good houses, and as fashionable people as are to be feen in any town in Scotland of its bulk. At the north end of the town there is a regular fort, which was built at the charge of the government in the reign of King Charles II.; who, in the time of his first war with the Dutch, fent over a garrifon confifting of 300 men under the command of one colonel William Sinclair a

native of Zetland, and one Mr Milne architect, for Lerwick, building the faid fort, with 20 or 30 cannons to plant upon it for protection of the country. There was a house built within the fort fufficient to lodge 100 men. The garrifon flaid here three years; the charge of which, with the building the fort, is faid to have flood the king 28,000 pounds fferling. When the garrifon removed, they carried off the cannon from the fort; and in the next war with the Dutch, two or three years after the garrifon removed, a Dutch frigate came into Brafay Sound, and burnt the house in the fort and feveral others the best in the town. Lerwick has no freedoms nor privileges, but is governed by a bailie upon the fame footing with the other bailies in the country. There is a church in it, and one minister, of the Presbyterian establishment. He has for stipend 500 marks paid him out of the bishop's rents of Orkney, 300 marks by the town of Lerwick, and the tythes of Gulberwick about 200 marks; making in all 1000 marks Scots yearly, with a free house and garden. Lerwick chiefly fublifts by the refort of foreigners to it; fo when that fails it must decline, as indeed it has done for feveral years past, having been very little frequented by foreigners, and thereby is become very poor. Several projects have been talked of, and written Gifford's upon, which might have been very beneficial to Lerwick Descript. of and Zetland had they taken place; as that of the British Zetland, merchants carrying goods from Muscovy and Sweden, p. 7defigned for the plantations in America, that must be entered in Britain, having them entered at Lerwick, which would fave a great deal of time and charges to these merchants; also the Greenland and Herring Fithery companies of Britain proposed Lerwick as a most commodious port for lodging their flores in, and for repacking their herrings, melting their oil, and thence exporting the fame to foreign markets. The grand objection to these settlements is, that Lerwick is an open unfortified place; and in case of a war, the merchants ships and goods would be exposed to the enemy: for removing of which difficulty, it has been obferved, that would government bestow a small garrison upon it of only 100 men and about 20 pieces of cannon, and be at a small charge in repairing the old fort, and erecting a small battery or two more, these measures might be sufficient to secure the place against any ordinary effort the enemy might make against it; and Lerwick being thus fortified, all British ships coming from the East or West Indies, could come fafely there in time of war, and lie fecure until carried thence by convoy, or otherwise as the proprietors should direct; and thus Lerwick might become more advantageous to the trade of Great Britain than Gibraltar or Port Mahon, and that for onetenth part of the charge of either of those places.

LESBOS, a large island in the Ægean sea, on the coast of Æolia, of about 168 miles in circumference. It has been feverally called Pelasgia, from the Pelasgi by whom it was first peopled; Macaria, from Macareus who fettled in it; and Leshos, from the fon-in-law and fucceffor of Macareus who bore the fame name. The chief towns of Lesbos were Methymna and Mitylene. It was originally governed by kings, but they were afterwards subjected to the neighbouring powers. The wine which it produced was greatly effeemed by the ancients, and still is in the same repute among the Lescaille moderns. The Lesbians were so debauched and diffipated, that the epithet of Lesbian was often used to fignify debauchery and extravagance. Lesbos has given birth to many illustrious persons, such as Arion, Terpander, Sappho, &c. See MITYLENE.

LESCAILLE (James), a celebrated Dutch poet and printer, was born at Geneva. He and his daughter Catharine Lescaille have excelled all the Dutch poets. That lady, who was furnamed the Sappho of Holland, and the tenth Mule, died in 1711. A collection of her poems has been printed, in which are the Tragedies of Genferic, Wenceslaus, Herod and Mariamne, Hercules and Dejaneira, Nicomedes, Ariadne, Caffandra, &c. James Lescaille her father deferved the poet's crown, with which the emperor Leopold honoured him in the year 1603: he died about the year 1677, aged 67.

LESCAR, a town of Gascony, in France, and in the territory of Bearn, with a bishop's see; seated on

a hill, in W. Long. o. 30. N. Lat. 43. 23.

LESGUIS, a people of Afia, whose country is indifferently called by the Georgians Lefquiftan and Daghestan. It is bounded to the fouth and east by Pertia and the Caspian, to the fouth west and west by Georgia, the Offi, and Kifti, and to the north by the Kifti and Tartar tribes. It is divided into a variety of diffricts, generally independent, and governed by chiefs elected by the people. Guldenstaedt has remarked, in the Lefguis language, eight different dialects, and has classed their tribes in conformity to this observation.

The first dialect comprehends 15 tribes, which are as follow: 1. Avar, in Georgian Chunfagh. The chief of this diffrict, commonly called Avar-Khan, is the most powerful prince of Lesguistan, and resides at Kabuda, on the river Kaferuk. The village of Avaris, in the dialect of Andi, called Harbul. 2. Kaferuk, in the high mountains, extending along a branch of the Koifu, called Karak. This diffrict is dependant on the Khan of the Kafi Kumychs. 3. Idatle, on the Koifu, joining on the Andi; fubject to the Avar Khan. 4. Mukratle, fituated on the Karak, and fubject to the Avan Khan. 5. Onfekul, fubject to the fame, and fituated on the Koifu. 6. Karakhle, upon the Karak, below Kaferuk, fubject to the fame. . Ghumbet, on the river Ghumbet, that joins the Koifu, fubject to the chief of the Coumyks. 8. Arakan; and, 9. Burtuma, on the Koifu. 10. Antfugh, on the Samura, subject to Georgia. 11. Tebel, on the same river, independent. 12. Tamurgi, or Tumural, on the same river. 13. Akhti; and, 14. Rutal, on the same. 15. Dshar, in a valley that runs from the Alazan to the Samura. It was formerly subject to Georgia, but is now independent. In mines were filled up, and the manufactures abandonthis diffrict are feen remains of the old wall that ed, prevented the ftrangers from effecting their return, begins at Derbent, and probably terminates at the Alazan.-The inhabitants of Derbent believe that their town was built by Alexander, and that this wall formerly extended as far as the Black Sea. It is, however, probable, from many infcriptions in old Turkish, Persian, Arabic, and Russish characters, that the wall, and the aqueducts with their various fubterraneous paffages, many of which are now filled up, are of high

quarter, then inhabited by Greeks. It was again ta- Left uis. ken by Schach Abbas. (Gaerber). This town is the old Pylæ Cafpiæ.

The second dialect is spoken in the two following districts: 1. Dido, or Didonli, about the fource of the Samura. This district is rich in mines; a ridge of uninhabited mountains divides it from Caket. 2. Unfo, on the small rivulets that join the Samura. These two districts, containing together about 1000 families, were formerly subject to Georgia, but are now independent.

The third dialect is that of Kabutik, which lies on the Samura rivulets, east of Dido, and north of Ca-

The fourth dialect is that of Andi, fituated on a rivulet that runs into the Koifu. Some of its villages are subject to the Avar Khan, but the greater part to the khan of Axai. The whole confits of about 800 families.

The fifth dialect is common to four districts, namely, s. Akusha, on the Koisu, subject to the Usmei. or khan of the Caitaks, and Kara Caitaks, containing about 1000 families. The following cuttom is attributed by Colonel Gaerber to the subjects of this prince: "Whenever the Ufinei has a fon, he is carried round from village to village, and alternately fuckled by every woman who has a child at her breast until he is weaned. This custom, by establishing a kind of brotherhood between the prince and his subjects, fingularly endears them to each other," 2. Balkar. 3. Zudakara, or Zudakh, down the Koifu, fubiect to the Usmei. 4. Kubesha, near the Koifu. Colonel Gaerber, who wrote an account of these countries in 1728, gives the following description of this very curious place : " Kubesha is a large strong town, situated on a hill between high mountains. Its inhabitants call themselves Franki (Franks, a name common in theeast to all Europeans), and relate, that their ancestors were brought hither by fome accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners cast away upon the coast: but those who pretend to be better versed in their hiflory, tell the flory this way :- The Greeks and Genoese, say they, carried on, during several centuries, a confiderable trade, not only on the Black fea, but likewife on the Caspian, and were certainly acquainted with the mines contained in these mountains, from which they drew by their trade with the inhabitants great quantities of filver, copper, and other metals. In order to work these upon the spot, they sent hither a number of workmen to establish manufactures, and instruct the inhabitants. The subsequent invasions of the Arabs, Turks, and Monguls, during which the fo that they continued here, and erected themselves into a republic. What renders this account the more probable is, that they are full excellent artifts, and make very good fire arms, as well rifled as plain; fabres, coats of mail, and feveral articles in gold and filver, for exportation. They have likewife, for their own defence, fmall copper cannons, of three pounds. calibre, cast by themselves. They coin Turkish and This town fuffered greatly during its fiege Persian silver money, and even rubles, which readily by Sultan Amurath, who entirely destroyed the lower pass current, because they are of the full weight and

Lefguis, value. In their valleys they have pasture and arable lands, as well as gardens; but they purchase the greater part of their corn, trusting chiefly for support to the fale of their manufactures, which are much admired in Persia, Turkey, and the Crimea. They are generally in good circumstances, are a quiet, inoffenfive people, but high spirited, and independent. Their town is confidered as a neutral spot, where the neighbouring princes can deposit their treasures with fafety. They elect yearly twelve magistrates, to whom they pay the most unlimited obedience; and as all the inhabitants are on a footing of perfect equality, each individual is fure to have in his turn a share in the government. In the year 1725, their magilirates, as well as the Ulmei, acknowledged the lovereignty of Ruffia, but without paying any tribute." 5. Zudakara, or Zadakh, down the Koifu, subject to the Usmei. It contains about 2000 families.

The fixth dialect belongs to the districts on the eastern slope of Caucasus, between Tarku and Derbent, which are, 1. Caitak; and 2, Tabafferan, or

Kara Caitak, both subject to the Usmei.

The feventh dialect is that of Kafi-Coumyk, on a braneh of the Konisa, near Zudakara. This tribe has a khan, whose authority is recognised by some neighbouring districts.

The eighth dialect is that of Kuraele, belonging to

the khan of Cuba.

Besides these, there are some other Lesguis tribes, whose dialects Mr Guldenstaedt was unable to procure. From a comparison of those which he has obtained, it appears that the language of the Lefguis has no kind of affinity with any other known language, excepting only the Samoyede, to which it has a remote refemblance.

This people is probably descended from the tribes of mountaineers, known to ancient geographers under the name of Lefga, or Ligyes. The flrength of their country, which is a region of mountains, whose paffes are known only to themselves, has probably at all times fecured them from foreign invafion; but as the same cause must have divided them into a number of tribes, independent of each other, and perhaps always diflinguished by different dialects, it is not easy to imagine any common cause of union which can ever have affembled the whole nation, and have led them to undertake very remote conquelts. Their history, therefore, were it known, would probably be very uninteresting to us. They subsist by raising cattle, and by predatory expeditions into the countries of their more wealthy neighbours. During the troubles in Perfia, towards the beginning of this century, they repeatedly facked the towns of Shamachie and Ardebil, and ravaged the neighbouring diffricts; and the present wretched flate of Georgia and of part of Armenia, is owing to the frequency of their incursions. In their persons and dress, and in their general habits of life, as far as thefe are known to us, they greatly refemble the Circaffian.

LESKARD, a town in Cornwall, feated in a lewel, is a corporation, and fends two members to parliament. It had formerly a castle, now in ruins. It is one of the largest and best built towns in Cornwall. with the greatest market. It was first incorporated by Edward earl of Cornwall, afterwards by King John's

fon, Richard king of the Romans, and had privileges Leffie, from Edward the Black Prince. Queen Elizabeth granted it a charter; by which it was to have a mayor and burgeffes, who flould have a perpetual succesfion, purchase lands, &c. Here is a handsome townhall built on frone pillars, with a turret on it, and a noble clock with four dials that cost near 200 l. Here are a large church, a meeting-house, an eminent freefehool, and a curious conduit; and on the adjacent commons, which feed multitudes of sheep, there have been frequent horse-races. It has a market on Saturday, and feven fairs in the year. The lift of its parliament men begins the 23d of Edward I. Here is a very great trade in all manufactures of leather; and fome fpinning is fet up here lately, encouraged by the clothiers of Devonshire. On the hills of North Leskard, and in the way from hence to Launceston, are many mines of tin, which is cast at the blowing houses into blocks, that are fent hither to be coined. LESLIE (John), bishop of Ross in Scotland, the

fon of Gavin Leslie an eminent lawyer, was born in the year 1526, and educated at the university of Aberdeen; of which diocefe he was made official, when but a youth. He was foon after created doctor of civil and canon law; but being peculiarly addicted to the fludy of divinity, he took orders, and became parfon of Une. When the reformation began to spread in Scotland, and disputes about religion ran high, Dr Leslie, in 1560, dishinguished himseif at Edinburgh as a principal advocate for the Romish church, and was afterwards deputed by the chief nobility of that religion to condole with queen Mary on the death of her husband the king of France, and to invite her to return to her native dominions. Accordingly, after a fhort refidence with her majefty, they embarked together at Calais in 1561, and landed at Leith. She immediately made him one of her privy council, and a fenator of the college of justice. In 1564, he was made abbot of Lundores; and on the death of Sinclair was promoted to the bishopric of Ross. These accumulated honours he wished not to enjoy in luxurious indolence. The influence derived from them, he exerted to the prosperity of his country. It is to him that Scotland is indebted for the publication of its laws. commonly called " The black acts of parliament," from the Saxon character in which they were printed. At his most earnest defire, the revision and collection of them were committed to the great officers of the crown. In 1568, queen Mary having fled to England for refuge, and being there detained a prifoner, queen Elizabeth appointed certain commissioners at York to examine into the cause of the dispute between Mary and her subjects. These commissioners were met by others from the queen of Scots. The bishop of Ross was of the number, and pleaded the cause of his royal mittrefs with great energy, though without success: Elizabeth had no intention to release her. Mary, disappointed in her expectations from the conference at York, sent the bishop of Ross ambassador to Elizabeth, who paid little attention to his complaints. He then began to negociate a marriage between his royal mistress and the duke of Norfolk; which egociation, it is well known, proved fatal to the duke, and was the cause of Leslie's being sent to the Tower. In 1573 he was banished the kingdom, and retired to Holland.

Leflie. Holland. The two following years he fpent in fruitespouse the cause of his queen. His last application felf, in 2 vols folio. was to the pope; but the power of the heretic Elizabeth had no lefs weight with his holinefs than with the other Roman Catholic princes of Europe. Finding all his perfonal applications ineffectual, he had recourfe to his pen in Queen Mary's vindication; but Elizabeth's ultima ratio regum was too potent for all his arguments. Bishop Leslie, during his exile, was made coadjutor to the archbishop of Rouen. He was . at Bruffels when he received the account of Queen Mary's execution; and immediately retired to the convent of Guirternberg near that city, where he died in the year 1506. It was during the long and unfortunate captivity of Mary, that he amused himself in writing the History of Scotland, and his other works. The elegance and charms of literary occupations forved to affuage the violence of his woes. His knowledge and judgment as an historian are equally to be commended. Where he acts as the transcriber of Boece, there may be diffinguished, indeed, some of the inaccuracies of that writer. But, when he fpeaks in his own person, he has a manliness, a candour, and a moderation, which appear not always even in authors of the Protestant persuasion. His works are, 1. Af-"Ai animi confolationes, &c. composed for the confolation of the captive queen. 2. De origine, moribus, et gestis Scotorum. 3. De titulo et jure serenissima Maria Scotorum regina, quo regni Anglia successionem sibi juste vindicat. 4. Paranefis ad Anglos et Scotos. 5. De illuft. faminarum in rpeubl. administranda, &c. 6. Oratio ad reginam Elizabetham pro libertate impetranda. 7. Paranefis ad nobilitatem populumque Scoticum. 8. An account of his proceedings during his embaffy in England from 1568 to 1572; manuscript, Oxon. 9. Apology for the bishop of Rofs, concerning the duke of Norfolk; manuscript, Oxon. 10. Several letters, manuscript.

LESLIE (Charles), an Irish divine, and a zealous Protestant: but being attached to the house of Stuart, he left Ireland, and went to the pretender at Bar le Duc, and refided with him till near the time of his death; for the conduct of life. constantly endeavouring to make him a Protestant, but without effect. He died in 1722. His principal works are, I. A short and easy method with the De- the gospels and Acts of the Apostles in the morning, iffs, 2. A flort and eafy method with the Jews, and the epiftles in the evening, in the order they fland 3. The fnake in the grafs. 4. Hereditary right to in the New Testament : excepting on faints days and the Crown of England afferted. 5. The Socinian holy days, when fuch lessons are appointed as either controverfy discussed. 6. The charge of Sociniaism explain the mystery, relate the history, or apply the against Dr Tillotson considered; and many others. example to us.

All his theological pieces, except that against Arch- Leffer lefs endeavours to engage the powers of Europe to bishop Tillotson, were collected and published by him. Lessons.

LESSER TONE, in music. See TONE.

LESSINES, a town of the Austrian Netherlands, in Hainault, feated on the river Dender, and famous for its linen manufacture. W. Long. 3. 53. N. Lat.

LESSONS, among ecclefialtical writers, portions of the Holy Scripture, read in Christian churches, at

the time of divine fervice.

In the ancient church, reading the Scriptures was one part of the fervice of the catechumens; at which all persons were allowed to be present, in order to obtain instruction.

The church of England, in the choice of leffons. proceeds as follows: for the first lesson on ordinary days, the directs, to begin at the beginning of the year with Genefis, and so continue on, till the books of the Old Testament are read over; only omitting the Chronicles, which are for the most part the fame with the books of Samuel and Kings, and other particular chapters in other books, either because they contain names of persons, places, or other matters less

profitable to ordinary readers.

The course of the first lessons for Sundays is regulated after a different manner. From Advent to Septuagefima-Sunday, fome particular chapters of Ifaiah are appointed to be read, because that book contains the clearest prophecies concerning Christ. Upon Septuagefima Sunday Genefis is begun, because that book which treats of the fall of man, and the fevere judgement of God inflicted on the world for fin, beit fuits with a time of repentance and mortification. After Genesis, follow chapters out of the books of the Old Testament, as they lie in order; only on festival Sundays, fuch as Eafter, Whitfunday, &c. the particular history relating to that day is appointed to be read : and on the faints-days, the church appoints leffons out of the moral books, fuch as Proverbs, Ecclefiaftes, Ecclefiafticus, &c, as containing excellent instructions

As to the fecond leffons, the church observes the fame course both on Sundays and week-days: reading

ERRATA.

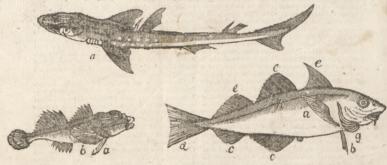

Vol. VII. p. 99. col. 1. l. 11. from bottom. For 1760, read 1770.

238. col. 1. l. 16. from bottom. For "See Fillebed," read "See Philibeg." 299. col. 1. l. 23. For flood, read ebb; and in l. 24. dele " or old."

Vol. VIII. Plate CCXXIX. fig. 8. For 13, read 17; for 14, r. 18; for 15, r. 19; for 16, r. 20; for 17,

r. 13; for 18, r. 14; for 19, r. 15; for 20, r. 16.
Plate CCXXXIII. fig. 24. The Hatchments N° 1, 2. are shaded, by mistake, on the dester inftend of the smiller shade.

Vol. IX. In Plate CCLI. fig. 2, 4, 5: (Ichthyology), the letters of reference happened to be omitted. Corrected imprellions were intended to have been given; but it was found that the flate of the plate would not admit of it, and there was not time for a new engraving. The omiffions, however, may be eafily fupplied with the pen, by copying in the letters as they are reprefented below:
